WORLD OF INDIAN FINANCE

Calcutta, February 7.

The current week has been a replica of the last. Money has continued stringent; and, towards the finish, there was as acute a squeeze as the market has not known for many a day. Credits were bid for at 3½ per cent. and higher; but there were practically no lenders. It is quite likely that the market must have sold intermediate sterling at the tap rate to the Controller of the Currency. The tap rate remains at 1s. 6 3/16d., the upper point. In the last week, total remittances came to £1,837,000. Deducting from this the amount allotted on the weekly tender day, the Government should have bought anything like £1 million at the highest point which the rupee-rate can, in the present circumstances, touch. It may be that the *communique* to be issued next week will show a similar state of affairs. It has been suggested that when the Government can get such a high rate for their remittances, there is profit to the taxpayer. It is true that there is some little saving because of the higher exchange rate which the Controller of the Currency is able to get for Councils. But what profit he makes in this deal, he loses, and much more by the higher Treasury Bills borrowing rate which is the direct result of the present monetary and exchange policy of the Government. The exchange market is more or less at a standstill. Business transacted is of the slightest dimensions. Exporters are keeping back their bills as the present rates are far too high. As for the money market, business is stagnant because there are no credits to lend. The only way for banks securing funds is by selling sterling to the Government. It is difficult to understand what purpose is served by persistence in the present deflationary policy. It does not suit the money market; it is adversely affecting the commodities market; it is detrimental to stocks and giltedge; and the Government are paying through their nose for Treasury Bills. We ask again: In whose interest and for whose benefit and for what profit is the present policy being enforced? We wish that some members of the Assembly would take up this question.

Support for our point of view is forthcoming from quarters which rarely agree on these questions. Inviting attention to the immediate necessity to expand currency, the Committee of the Indian Chamber of Commerce (Calcutta) argue as follows:

> "It is curious that in a period when the British monetary authorities have been creating records for low Treasury Bills borrowing, the Indian Treasury has been pushing up discounts in a futile attempt to allure funds. The persistence in utilising sterling purchases for enforcing a deflationary policy is opposed to scientific canons, injurious to national interests, embarrassing the ways and means position, disruptive of the giltedge market, and detrimental to the recovery of commodity price.'

They stress the conclusion, which exactly coincides with our own view, that "up to the limit of the budget programme sterling purchases should be the Treasury operations and beyond that limit they should be deemed currency operations resulting in an automatic expansion of currency." The *Times of India,* in the course of an ably written editorial, emphasises that sterling purchases as carried on at present are "deflationary in effect." In so far as purchases of sterling in excess of home charges requirements are financed through increased borrowings, the operation has a deflationary effect, even though actual contraction of currency may not occur. It comes to the conclusion that accumulation of reserves is a currency operation and justifies an issue of currency for active circulation, the more so at the moment when the market is suffering from stringency. And why should the Government refuse to release cash against sterling assets when it would not only relieve the uncomfortable ways and means position of the Government of India but would come as a timely help to the money market? Such expansion will not in any way fritter away the sterling resources or endanger the stability of the external reserves of the Reserve Bank.

The present truculence of the Government is, however, nothing new. The Hilton-Young Commission refers to the practice of the Indian Treasury in the following terms: "On occasions the obligation to buy sterling exchange has been discharged by Government without any corresponding expansion of domestic currency; the purchases have in the first instance been

made against Treasury balance and the currency expansion has been left to be effected subsequently at the discretion of Government." The case that we make out is that this currency expansion must not be a mere matter of discretion of Government. It should be obligatory on them to expand currency as soon as sterling remittances begin to exceed budgetted programme. The discretion that has rested with the Government has, in the past and the present, been exercised in a way that has done great harm to every interest concerned. A fundamental question of policy is involved ; and now that the matter has engaged the attention of others beyond *Indian Finance*, it is up to the Finance Member to explain why he remains adamant to the voice of public opinion.

It is amazing that despite such severe pressure for money, giltedge prices have more or less maintained their level. 3½ per cent. Paper, from below Rs. 98 last week-end, spurted up to Rs. 98-8 in the current week. Towards the close, however, there was a reactionary tendency, bringing the price down to about Rs. 98. That securities have maintained their level in spite of continued tightness of money must surely be construed as an indication of the intrinsic soundness of the giltedge situation. It is quite possible that developments in connection with the budget will further improve and enhance the favourable features. It was announced this week that the cut in salaries would be restored as from the new financial year. This has given rise to hopes that some relief might be forthcoming to income-tax payers. The budget is, presumably, balanced ; and the Finance Member may be budgetting for a surplus for the next year. More or less definite certainty of a balanced budget and the probability that there may be a reduction in the income-tax, are factors which should stimulate giltedge prices.

In this connection, it is interesting to examine the rate at which the Reserve Bank shares will be issued. The public have but hazy ideas in this matter, and the general impression is that the interest of Reserve Bank shares will be 5 per cent. It is useful to elucidate the position in this regard. Section 47 of the Reserve Bank Act which refers to this matter reads as under:

> "After making provision for bad and doubtful debts, depreciation in assets, contributions to staffs and superannuation funds, and such other contingencies as are usually provided for by bankers, and after payment out of the net annual profits of a cumulative dividend at such rate not exceeding 5 per cent. per annum on the share capital as the Governor General in Council may fix at the time of the issue of shares, a portion of the surplus shall be allocated to the payment of an additional dividend to the shareholders calculated on the scale set forth in the Fourth Schedule and the balance of the surplus shall be paid to the Governor General in Council. Provided that if at any time the Reserve Fund is less than the share capital, not less than fifty lakhs of rupees of the surplus, or the whole of the surplus if less than that amount, shall be allocated to the Reserve Fund."

It will thus be necessary for the Governor-General in Council to declare a rate at the time when the shares are made available ; the maximum has been fixed by the Act at 5 per cent. ; the minimum must, obviously, bear reference to the level of yield on government securities. We suggest that the rate that should be fixed by the Governor General should be 3 per cent. There is no point or justification in offering a higher rate on Reserve Bank stock. Shares of the Reserve Bank are as good as Government stock. The yield on these shares should, therefore, not be higher than that on government securities. Moreover, while the holder of government securities is entitled to nothing beyond the periodial interest and the return of capital on the date of maturity, the holder of Reserve Bank shares will have a precious privilege in the form of voting. We expect that the shares will be heavily oversubscribed, necessitating action in terms of the following sub-clause: "In allotting the shares assigned to a register, the Central Board shall, in the first instance, allot five shares to each qualified applicant who has applied for five or more shares ; and, if the number of such applicants is greater than one-fifth of the total number of shares assigned to the register, shall determine by lot the applicants to whom the shares shall be allotted."

There is, therefore, bound to be a heavy demand for these shares ; and it would be folly to offer an unduly high rate. We also expect that the meetings for the election of Directors will be attended by such a large number of shareholders as would render impossible the holding of such meetings in the Bank premises. Special arrangements may have to be made for such meetings. Once the public subscribe in large numbers and with great avidity for these shares, the election of directors is bound to prove a lively affair.

The exchange market has been firm but totally lacking in business turnover. There have hardly been any bills offering as the present rates are too high for exporters. There are alround sellers at 1s. 6 1/8d.

The closing rates are: 1s. 6 1/8d., February T.T. ; 1s. 6 3/32d., March T.T. ; 1s. 6 1/16d., April-May T.T. ; and 1s. 6 1/32d., June-October T.T.

Bills may be quoted: 1s. 6 7/32d., February ; 1s. 6 3/16d., March ; 1s. 6 5/32d., April-May ; and 1s. 6 1/8d., June-October.

Money has been extremely stringent with little available. The quotable rate is 3 per cent. Even higher rates were offered without attracting any funds.

Onemonth, twomonth and threemonth deposits quoted 1¼, 1¼ and 1½ per cent.

Sixmonth deposits and twelvemonth deposits quoted 2¼ per cent.

Thursday Evening.

In strange contrast to the beginning of the year, when events seemed to move fast, the present appears to mark a lull in international finance. For one thing the Supreme Court in America has once again deferred the announcement of its verdict on the gold clause cases. It is said that, though usually the Court announces its decisions on a Monday, there is no rule which forbids the delivering of the judgment on other days. At the time of writing, the week is nearly run out ; and one might, therefore, assume that in this instance there will be no departure from the usual custom. Though the markets have overcome the panicky feelings of a week ago, nothing can detract from the importance of this gold clause question, both in American and world finance. The stock markets in America cannot be, and have not been, active owing to this uncertainty. And it is quite understandable that the Administration are holding up some important measures in order that they might know first the Supreme Court's decision in this matter. It is also conceivable that a decision adverse to the Administration, that is, refusing to recognise the validity of the abrogation of the gold clause, would have the effect of precipitating the whole question and thus resolving some of the major uncertainties of America's monetary policy.

The persistence of this uncertainty has helped a comparative steadiness in the international exchanges. The sterling-dollar and the sterling-franc rates have moved within but narrow limits, sterling on the whole showing an upward trend. There is nothing strange about this, as this is the time of the year when sterling should wax strong. In fact, adverse developments of various kinds had interferred successively with the recovery of sterling from its seasonal depression. But one cannot expect to find in the present conditions the replica of past years.

It is even apprehended in some quarters in London that this year may not see the seasonal appreciation of sterling, as the cross currents and uncertainties of international finance at this time are far too great to allow free play to the seasonal factors. If this forecast proves true, the continuance of the comparatively low level of sterling may lead to certain consequences. For it is only when sterling appreciates to about the same extent as it fell during Autumn that the Equalisation Fund will have an opportunity to replenish its stocks of gold. And it is highly necessary that the Fund be in a position to have command over gold, as otherwise it would have no means of controlling the exchanges when the autumnal depression sets in. If it should prove true that sterling runs an even course in the first half of the year and is subject to the pressure of the commercial demand for dollars in the third quarter of the year, then the end of 1935 might see a far lower level of sterling than we have been accustomed to in the past. In the event of such unwelcome developments, the only hope lies in the prospect of a stabilisation agreement among the nations, which will obviate the outlay on the part of the Exchange Stabilisation Fund of any large amounts on the task of maintaining the exchanges.

But what prospects are there of such an agreement before the next Autumn ? We have been following the trend of affairs in this regard and though there have been, now and then, setbacks which we dutifully record, we have taken the view that the general trend is towards stabilisation. Developments during the last fortnight are somewhat of a mixed kind. The adverse circumstances are the continuance of the uncertainty about the gold clause and the increasing certainty that nothing momentous has happened in the recent Conference between M. Flandin, the French Premier, and the British Chancellor of the Exchequer. The terms of the Anglo-French understanding, which were announced in the middle of the week, make it clear that the representatives of France and Britain should have had a great deal of work by way of political problems and negotiations, and that the time available for the discussions of financial problems could not have been much. At the same time there is no doubt that the opportunity should have been availed of both by the British Chancellor and the French Premier to have a frank exchange of views on the subject. It is also possible that M. Flandin had this consultation with the British Chancellor as one of the principal objects of his visit to London. And the circumstance that the Premier was himself formerly the Minister of Finance in the French Cabinet and is, therefore, too well-posted with information to need any special assistance, is also an encouraging circumstance. The British papers seem to be certain that such exchange of views has taken place, though there was no attempt to bridge the obvious differences of opinion. It is simply too much to expect that at this stage M. Flandin would be in a position to make proposals to the British Government. For there has been during recent times a number of equivocal statements in Paris regarding the content and purpose of the new monetary policy. While, on the one hand, the Premier insists on reflation being one of the principal means of bringing about a recovery, M. Germain-Martin, the Minister of Finance, is reassuring the public that the new policy has no dangers for the franc.

It is worth while to examine these viewpoints. So far as France is concerned, the present policy and the inclinations of the Ministry have been already explained. As for Britain, the British Press sees in a recent statement of the Chancellor of the Exchequer, a new significance. The statement referred to is that of Mr. Neville Chamberlain in which he said that sterling was overvalued in terms of the dollar and undervalued in terms of the franc and insisted that the obliteration of such overvaluation and undervaluation would be a condition precedent to the stabilisation of sterling. This statement has to be interpreted to mean that Great Britain has definitely outgrown the stage of anxiety for undervaluation of sterling in terms of all other currencies. In other words, so far at least as British is concerned, she has overcome the present mania for competitive depreciation. If it is true that Mr. Chamberlain meant to convey such an idea to the foreign nations, the statement, undoubtedly, marks a great advance towards the restoration of an international monetary standard. There is, indeed, no reason why Britain should still insist on the illegitimate advantage of undue depreciation. It is said that Britain has come to feel that there is no longer need for preserving the narrow outlook of the period following September 1931 and that it is time that Britain resumes her espousal of free international trade and finance.

A similar attitude is also said to have come over the United States. A writer in the *Financial News* states that, while formerly even a slight depreciation in sterling would evoke storms of protest in the American Press, to-day America is inclined even to welcome such depreciation. There is no means of judging how far this statement is true. Again, one can only say that it is possible that America, like Britain, has gained such advantage from the undervaluation of the dollar, that she might now be disposed to regard that as a favourable proposal for an equitable stabilisation. This reading of the situation is extremely heartening and it only for that reason deserves to be taken a note of.

TREASURY BILLS

The Controller of the Currency notifies that tenders for Rs. 1½ crores of three months Treasury Bills were opened on Tuesday, February 5. The total amount offered was Rs. 1,66,00,000. Tenders at Rs. 99-8-3 and above were accepted in full and those at Rs. 99-8-0 were allotted approximately 91 per cent. Lower tenders were rejected. The total amount accepted was Rs. 1½ crores, the average rate of accepted tenders being Rs. 2 per cent. per annum.

Tenders for Rs. 1½ crores of three months' Treasury Bills will be received on Tuesday, February 12. Successful tenderers should make payment on Friday, February 15. Other conditions are as usual.

Three months' intermediates will be sold from February 6 to 11 at Rs. 99-8-6 per cent. subject to the conditions previously announced.

Three months' intermediates sold from January 30 to February 4 amounted to Rs. 29,25,000.

STERLING TENDERS

The Controller of Currency notifies that on Wednesday, February 6, tenders to the amount of £700,000 at 1s. 6 5/32d. were received and allotted in full. Lower tenders were rejected.

£1 million will be offered for tender on Wednesday, February 13 on the same conditions as previously announced.

NEW LOANS?

In our last week's discussion of the deflationary policy of the Government, we stressed the view that this policy was unfortunate, detrimental and ill-timed, particularly because the occasion is opportune for the issue, in the first place, of a 2½ per cent. short-term loan giving an yield of about 2.8 per cent.; and, in the second place, a conversion loan to deal with the 3½ per cent. Rupee Paper. Our proposals were sketched in the money market review section; and the limited space of this feature and the variety of topics that must needs be discussed constrained us to give but a bare outline of our suggestions. We believe that the case for the loans on the lines indicated in these columns is so strong and so pressing that a more detailed discussion of this matter is now called for. That the giltedge market is heading for a rise, is a matter on which there can be no doubt. We have been told that the Government and the Imperial Bank have unloaded large parcels of 3½ per cent. Rupee Paper and other securities; and that this must be construed as an indication that the authorities are either apprehensive of the present giltedge level or not in favour of further rise. The timidity of our authorities is proverbial. In new loan after loan, we have had to deplore their lack of courage and imagination. In fact, the market has shown itself more daring than the authorities. It is not the Government that have led the market. It is the market that has pushed the Government in this process of conversion. We do not, therefore, attach any importance to the views that may happen to be held in official quarters. We are convinced that whether the authorities like it or not, whether or not they shape their policies and operations in consonance with market temper and market trends, the conversion of 3½ per cent. Rupee Paper into a loan on a lower interest basis is inevitable, as the intrinsic giltedge situation both in India and in England is more or less alike and must result in the borrowing rate of both the Governments coming down to Mr. Keynes's level of 2½ per cent.

* * *

Natural forces tend towards this rate. The British Government have taken the fullest advantage of the natural forces; and they have thereby stimulated and accelerated them. The Indian authorities have not been equally alive to the implications of the situation; they have done their best to weaken and debilitate the natural forces. It is hardly necessary for us to emphasise that these natural forces will prove mightier than the authorities. We do not, therefore, consider that the reported sales of securities by the Controller of the Currency and the Bank must at all be construed as a bearish factor.

* * *

Again, we have been told that market operators have had to take delivery of large blocks of 3½ per cent. Paper; that the market is definitely and unhealthily over-bought; that the high *budlee* rates are a token of this unsound position; that the speculative purchases are far beyond the digesting capacity of the market; that, sooner or later, heavy sales by weak bulls are unavoidable; and that, therefore, there is bound to be a considerable setback. We do not share these apprehensions. We have made a careful study of the market's position. We can claim, we think, fairly reliable knowledge of the capacity of the Indian giltedge market. The high *budlee* rates that are now paid for the carrying forward of future deliveries, are simple enough to understand in relation to the deflationary policy of the Government. It is the transfer of Government's balances from India to London that has induced and maintained the dear money rates in India. If call money is high partly due to the policy of the Treasury and partly due to increased activity in the bullion, commodity and stock markets, how can we expect the *budlee* rates for government securities to be other than high? The sales by the authorities were made more than a month ago. The digesting capacity of the Bombay giltedge operators is pretty considerable. A good part of the Rs. 2 crores of the reported sales must already have passed into the hands of investors. In any case, it would not be long before the so-called unhealthy position in this regard is duly and fully rectified.

* * *

There is another important consideration. If we study the giltedge price movements of the last eighteen months, it will be noticed that the market takes a good long pull-up; rests at the new level for a few weeks; and records another sharp pull-up, and so on. The levels of Rs. 88 and Rs. 91 were, from this point of view, the resting stages. In our view, Rs. 98 is another stage of recuperation and consolidation. There is every indication that the market is well-nigh consolidated at this rate. Even when the market operators knew that the authorities were selling large blocks of securities, they readily absorbed whatever was sold; and these heavy unloadings did not depress prices to any appreciable extent. Even now, occasional setbacks have taken the market down to Rs. 97-4, at which level not only is great resistance shown to further decline, but storng buying pressure has emerged. It can be stated, with some measure of confidence, that, roundabout Rs. 98, the market in the present conditions does not show any signs of giving way. On the other hand, there is no reason why the trick that took the market from Rs. 91 to the present level could not or would not be repeated.

* * *

Continued stringency, persistent truculence of the authorities on the question of expansion of currency, and increased activity in the ordinary shares of sound industrial concerns, have not succeeded in damping the enthusiasm or diverting the attention of the giltedge operators. This is a point, the full significance of which must, we urge, be appreciated by the Government. Once they understand its importance, they should have no difficulty in realising that the suggestions which we have put forward for the two loans are in the nature of the biggest assistance which the press could render to them. We may now proceed to a more critical examinsation of the proposal for the 2½ per cent. loan. We suggest that the loan should be a 2½ per cent. 1942 loan at an issue price of Rs. 98-8 or Rs. 99. This should give an yield in the vicinity

of 2¾ per cent., which roughly corresponds to that on the 3 per cent. 1941 loan at Rs. 101. Holders of 5 per cent. 1935 bonds and 6½ per cent. 1935 bonds should be given the option to convert into the 2½ per cent. loan. The total outstanding amount on 5 per cent. 1935 bonds is Rs. 11.43 crores; and that on 6½ per cent. 1935 bonds is Rs. 16.10 crores. The total amount that is to be dealt with this year for conversion is thus Rs. 28 crores. Though we know that a substantial proportion of the 6½ per cent. loan is held by upcountry investors, we would not be far wrong in assuming that at least Rs. 15 crores of the total of the two loans must be held in money market circles. This amount in its entirety is sure to be converted into the 2½ per cent. loan, which is calculated to make a special appeal to banks and similar investment institutions. On the whole, there are ground to believe that against the Rs. 28 crores which should be found for the redemption of the two maturing loans of this year, anything like Rs. 20 crores can be converted into the proposed issue. The problem of the unconverted can be tackled in the monsoon months.

* * *

At the same time, we would suggest that the loan should be made available for cash subscriptions also. In explaining our reasons for this suggestion, we wrote as follows in the last issue:

> "The Reserve Bank will be coming into existence on April 1. It would be in receipt of Rs. 5 crores by way of share capital and, a few months after, of Rs. 6 crores to Rs. 7 crores by way of compulsory deposits from member banks. The Bank would require, at the very start, a considerable portfolio of short-term giltedge securities. It is unthinkable that the Bank will be able to buy short-term securities from the open market for its full requirements. It is, therefore, quite on the cards that if the proposed 2½ per cent. loan were made available for cash subscriptions. the Reserve Bank will be taking up a big slice. If the loan is floated before the inauguration of the Reserve Bank, some arrangement can be made whereby the purchases will be made by the Imperial Bank or some authority, the same to be handed over to the Reserve Bank after commencement of business."

On deeper consideration over this argument, we are all the more convinced that inviting cash subscriptions for the 2½ per cent. loan is essential.

* * *

The way in which this loan is handled and its successful floatation should supply fresh stimulus to giltedge prices. It is also possible that especially in Calcutta and Bombay territories, applications for Reserve Bank shares will be on such a colossal scale that even applicants for five shares each cannot be sure of receiving allotment. The Reserve Bank Act provides for this contingency; and we believe that drawing by lots would be necessary. Thanks to the appeal which *Indian Finance* made, a good few months ago, that every Indian should consider it a national duty to subscribe for, and hold, five shares in the Reserve Bank, preparations have been made long ahead by all sections of the people to subscribe for the Reserve Bank shares. Leading brokers are reported to have circularised their clients and collected applications. Heads of business firms would, perhaps, like to build up considerable voting power by ensuring that every member of the staff subscribes for the Bank shares. We have come to know that elaborate preparations and arrangements are being made. If, therefore, there is only allotment by drawing of lots, there should be strong demand for Reserve Bank shares in the open market. These shares are sure to go to a substantial premium. This must be considered another important bulish factor for giltedge. In the atmosphere thus created, it should be most propitious to issue the conversion loan designed to deal with the 3½ per cent. Rupee Paper.

* * *

At the outset, let us deal with the impression, widely prevalent, that the sum involved in the 3½ per cent. Rupee Paper is far too big to be dealt with in a successful conversion operation. The total outstanding amount of 3½ per cent. Rupee Paper is just over Rs. 100 crores. This is one-twenty-fifth of the total involved in the War Loan conversion of Mr. Neville Chamberlain. Prior to this brilliant performance of the British Chancellor of the Exchequer, an impression not unlike what rules in India was also prevalent in British circles. Nothing succeeds like success; and the sheer audacity of Mr. Chamberlian ensured the amazing and instantaneous success of his conversion plan. We can assure the Finance Member that like success will attend like daring in India. Let us look at this matter from a practical standpoint. Insurance companies amongst themselves hold anything like Rs. 15 crores of the total. Trustees and other investors hold, perhaps, Rs. 20 crores. Ruling Princes and magnates hold Rs. 25 crores. The miscellaneous public, whose faith is rooted in giltedge irrespective of fluctuations in price, must be the owners of a considerable proportion of the balance. Speculators, jobbers, professionals and banks may be holding, in all, Rs. 10 crores. Various departments of the Government might account for Rs. 10 crores. If this analysis of the stock holding were studied carefully, it will be found that the 3½ per cent. paper is now in the hands of such persons or institutions as will, in most cases, have no other option than converting. For instance, if the Oriental Life Insurance Company does not choose to convert and takes the Rs. 12 crores and odd in the form of cash payment, what will it do with its money? Where will it invest it? Is there any guarantee that it will be able to get securities for its full requirements? Is there, further, a guarantee that the yield on the new purchases will be more satisfactory than the yield on the conversion loan? The simple fact of the matter is that if, for tackling the 3½ per cent. Rupee Paper, a pure conversion issue is made, the present holders will easily come to the conclusion that if they do not avail themselves of the offer of conversion, they might be worse off when they are in receipt of the cash. While we advocate the 2½ per cent. loan being both a cash and conversion loan, we should insist that the loan issue for converting 3½ per cent. Paper must be only a conversion loan.

* * *

As regards the actual terms of the conversion loan, we may repeat the following observations from our last issue:

> "The best plan would be to give three alternatives to the holders of 3½ per cent. Paper, namely, a 2½ per cent. short-dated issue giving an yield of 2¾ per cent., a medium-dated 3 per cent. loan, and a long-term 3 per cent. loan, the latter two being at par. By this means, the success of the conversion will be assured. At the same time, the Government will not find that the whole block of 3½ per cent. Rupee Paper is converted into a scrip in a single maturity. Most of the people who own 3½ per cent. Rupee Paper are believers in long-term securities. But a good few, especially in view of the disastrous experiences of recent years, might go in for a medium-term security. Such portion of the 3½ per cent. Paper as is held in the money market circles may happen to be converted into the short-dated issue. Our own view is that the proportion among the short-dated, medium-dated and long-dated issues will be 1: 2: 3."

It is with a full realisation of the consequences that we have made these suggestions. For our part, we have no misgivings as to the outcome of the conversion loan. We are firmly persuaded that a conversion issue aptly fashioned and courageously sponsored would result in the holders of at least 85 per cent. of the total involved in the 3½ per cent. Rupee Paper assenting to conversion. After the results of conversion are known, it should not be difficult to raise the cash needed for the unconverted portion, by the issue of a short-dated loan. Moreover, the Government have ample reserve resources. The scope for currency expansion is considerable. The immediate situation could well be tided over by increased Treasury Bills borrowings, which should be easier as cash released in respect of the unconverted portion of 3½ per cent. Paper must make money a glut in the market. In the improved money market technique which will be

ushered by the Reserve Bank coming into operation, recourse to ways and means advances should be an even more handy device than now. Taking all these factors into account, we suggest that there is no case whatsoever for timid or half-hearted or faint-hearted measures. The occasion calls for self-confidence and confidence in the future of India's credit. *Indian Finance* has the fullest confidence in the future of India's credit. Why should the custodian of India's finances lack it?

THE ROAD TO RECOVERY

Though there are many respects, in which, the depression, which began in 1929, is unique, there is nothing which marks it off more clearly from previous depressions than the accumulation of national and international problems towards what may be regarded as its end. There is, unquestionably, one sense in which the depression is at an end. The world has no longer reason to apprehend that the pendulum will swing it farther away from prosperity. Nor has it reason to hope that it will be swung back by the same rythmic movement towards more or less of the old affluence. In other words, the depression, as a cyclical change in economic fortunes, is at an end. There is very little movement left in the pendulum. In so far as this depression is a cyclical phenomenon, we have reaped in large part the improvement which we can expect. The recovery, talks of which have been heartening the world since the autumn of 1932, is due partly to the cheap money policy and other artificialities of economic nationalism and partly to the emergence of demand after a prolonged postponement of purchases. Opinions on this question are by no means unanimous. But there is substantial agreement that, even if the "recovery" is due to the assertion of the automatic forces of recovery, it has little go in it and cannot take us far. In other words, this depression is unique in that it offers endless problems not only as to its causes and character, but also as to whether it has come to an end as a slump or not.

* * *

After five years of economic distress, it is, perhaps, of less importance to know how it came about than to examine how it might be removed. It is not always the shortest or the easiest way out of the wood to scramble back exactly as one came into it. The path, by which one came in, may have grown impenetrable, or the fringe of the wood may be nearer on the other side. What is important, therefore, is not to probe into the genesis of the depression but to take our stand in the present and to examine its bearings. In his pamphlet on *The Road to Recovery*, which Sir Henry Strakosch has published as a supplement *The Economist*, Sir Henry concentrates his attention on the position as it is to-day and the changes which have occurred since the time the depression may be supposed to have reached its nadir. He relates the effects of the depression to the general trends of world economy in the period before it, in order the better to appreciate the extent of the setback and the ground that has to be recovered. Sir Henry tries to estimate the loss on account of the depression by more than one standard. The decline in production and trade is estimated not only in reference to the level of the pre-depression year, but also in reference to the normal rate of increase in the pre-depression period. Another refinement, unfortunately too rare in economic treatises, is that of bringing this shortfall and setback in relation to the growth in population. Statistics of production and trade can be no index of human well-being, unless they are considered in relation to the population which they are to sustain. That the standard of living must have fallen during this period of the depression is too obvious to call for mention. But the extent of the

fall must be gauged in relation to the increase in population and the rise in the standard of living which people had a right to expect on the basis of the experience of the pre-depression years.

The facts, figures and estimates which Sir Henry has gathered are so valuable that they might well bear reproduction in brief:

> It does not seem unreasonable to estimate that the combined production of the world's foodstuffs and industrial goods in the middle of 1934 was some 8 per cent. less than it was in 1929.
>
> Turning to the developments of international trade, the gold value of that trade has fallen continuously, and is now only about one-third of what it was in 1929. Its volume, on the other hand, reached its lowest point in the middle of 1933, when it amounted to about 70 per cent. of what it was in 1929, gold prices having fallen in the same period by 50 per cent. Since then there has been a slight recovery.
>
> Had there been no depression, and had the rhythm of economic progress of the pre-depression period continued, world production would have been 15 per cent. greater now than it was five years go. If we want to appraise the real damage done to the world's economy by the depression, we have to compare the 115 per cent. which the world's combined production would have reached if there had been no depression, with the 92 per cent. to which it has actually fallen. As compared with normal progress, the deficiency, therefore, is no less than 20 per cent.

Taking into account the increase of population at 1 per cent. per annum,

> The mere maintenance of the standard of life of five years ago calls for an increase of production during that period of 5 per cent. The fact that there has been a decrease of 8 per cent. suggests that a debasement of no less than 12 per cent. has taken place in the standard of life of five years ago, in place of an improvement of 10 per cent., if there had been no depression. The increase of 1 per cent. per annum in population, coupled with the pre-depression increase of 3 per cent. per annum in world production, indicates that, under normal circumstances, the standard of life used to increase by 2 per cent. per annum, or by 10 per cent. in five years. Hence this debasement of 12 per cent. should properly be compared with an increase of 10 per cent., or a difference of no less than 22 per cent.

As a means of impressing on the reader the paramount need for recovery, the figures cited above are invaluable. But Sir Henry's main thesis is based on an examination of the experience of countries divided into groups, according to the policies they have followed during recent years. It can be guessed that the principal criterion of such division is the monetary policy which each country has followed, either of its own choice or under the pressure of circumstances over which it has no control. This examination has been at once suggested and facilitated by the abandonment of the gold standard by the British Commonwealth of nations in September 1931, and the quick succession in which its action was followed by a great many other countries. The course of the depression may, therefore, be divided into two distinct phases, the first covering the period when the whole world maintained the gold standard and the second when the majority of them had abandoned it. The latter period, says Sir Henry, "is of special interest because it affords an opportunity of ascertaining how the two policies have affected the course of things in their respective countries or groups of countries."

* * *

Students of the depression may easily guess the exact value of this examination, for it will tend to show the relative merits of the rival policies followed by the sterling and the gold standard countries; as also the limitations of what may prove on this examination to be the more efficacious policy. As is well known, it is generally assumed that the countries, which have abandoned the gold standard and have recovered a degree of independence for their monetary policy, have been able to ensure a pace of recovery which would have otherwise been unattainable. Likewise, it is suggested that the countries which have adhered to the gold standard on the old parties have, with a purblind obstinancy, denied themselves the well-known fruits of depreciation, and have, for this reason, been the victims of, not only a prolonged but also an aggravated, economic depression. Though this purblindness on the part of gold standard countries is obviously improbable, the belief therein has persisted; and the tendency has been to have exaggerated notions of the sufferings of the gold standard countries.

Sir Henry attempts to estimate to a nicety the improvement in the sterling group and the setback in the gold group. The data necessary for this purpose comprise the indices of wholesale commodity prices, of industrial production, unemployment, insolvency and foreign trade.

* * *

All these indices, except foreign trade, show similar movement. The table shows a downward course in both groups during the period 1928 to 1931, the subsequent continuance of the downward course in the gold group and a comparative improvement in the sterling group. To go somewhat into detail, while the prices in the gold group show a downward trend, there is comparative stability of prices in the sterling group in the period following 1931. Production was shrinking in both groups up to the end of 1931, but, while in the gold group the shrinkage continued to the middle of 1932, the sterling group had a distinctly lower rate of shrinkage. Similar trends are also noticeable in the statistics of unemployment and insolvency.

* * *

It is on the basis of these tendencies that it is generally supposed that the off gold countries have less need now for concerted international action for recovery than the countries which still adhere to the gold standard. But an analysis of the experiences of these countries in the sphere of foreign trade shows the untenability of this view. We reproduce below a table dealing with the relevant figures:—

EXPORTS

As a Percental of Total World Exports (Gold Values)

Percentage		Gold Group			
		France	Belgium	Netherlands	Italy
1929	...	5.95	2.68	2.42	2.42
1930	...	6.34	2.74	2.61	2.41
1931	...	6.31	3.40	2.79	2.79
1932	...	6.00	3.19	2.64	2.78
1933	...	6.19	3.34	2.50	2.69

		Sterling Group			
		United Kingdom	Sweden	Denmark	Canada
1929	...	10.74	1.47	1.31	3.71
1930	...	10.48	1.57	1.54	3.42
1931	...	9.37	1.46	1.67	3.29
1932	...	9.91	1.35	1.58	3.77
1933	...	10.37	1.58	1.46	3.61

The important revelations of the statistical figures set out in the foregoing table may be briefly summarised. The sterling countries have suffered a reduction in their foreign trade with those very countries over which they are supposed to have acquired a competitive advantage through exchange depression. If the sterling countries have been able to maintain their share of the world trade, it is only through a marked increase in their trade with sterling countries. There is also a similar development in France's trade with her colonies. Though no one would deny the advantages which currency depreciation offers to countries for a time, it is significant that countries with depreciated currencies have not been able to expand their trade with countries continuing on their old parties. It will be seen from the table that the obstacles which bar the way to the resumption of international trade have hit both sterling and gold countries alike and that such improvement as is noticeable in the sterling countries must be attributed to the recovery in their internal economy. Such recovery in turn is explained by the fact that the depreciation of the currency has helped to restore that equilibrium between costs and prices, the lack of which was responsible for the depression

all over the world up to 1931 and is still responsible for the continuance of the depression in the gold group.

Sir Henry draws from this the conclusion that it is equally imperative for the gold and the sterling countries to attempt to remove the barriers which hinder the resumption of international trade.

* * *

The importance of Sir Henry's comparative estimate of the recovery in the gold and non-gold countries can hardly be over-rated. It shows, in the first place, that the off-gold countries have achieved nothing more than the equilibrium of internal costs and prices and such facility for expansion of internal economy as this equlibrium offers and that for any real recovery they depend to the same extent as the non-gold countries on the restoration of the free movement of international trade. It also shows the severe limitation of depreciation as a means of bringing about recovery. And another deduction from the statistics of foreign trade is that in areas, in which there is a fair uniformity of monetary standard, international trade tends to expand. Sir Henry's pamphlet is, therefore, a powerful plea for the restoration of an international monetary standard. The conditions required for this restoration and its smooth functioning are well-known and need hardly be cited here. But special mention must be made of the task of the gold bloc countries in respect of the equilibrium between internal costs and prices. That such equilibrium cannot be achieved by mere persistence in deflation, even France has begun to recognise of late. The devaluation of the gold currencies to the point, at which such equilibrium can be assured, is thus the first step towards the restoration of a common standard. Sir Henry advocates a reduction of all currencies to the extent of 60 per cent. In that case, the problem of the gold standard will change from one of shortage of gold and inadequancy of gold basis to an abundance of metallic reserves. Few will demur to his view that the inflation which is thus threatened is far less of an evil than the continuance of the present deflationary policy. There is substantial agreement between Britain and U.S.A. on the principles underlying this policy. And even France has started to flirt with reflation. Is it too much to hope that before the end of the year the world will have approached the immediate ideal of a monetary standard common to all nations?

CONGRATS

Sir Alexander Murray writes to us under January 14, 35:

I do not appear to have paid my subscription for my current year's copy of your paper. I therefore enclose cheque in your favour for Rs. 28 . . . . . .

I would like to take this opportunity of congratulating you on the great development that has taken place in your paper which long ago had become indispenable to any one who desires to keep in touch with Indian financial matters.

WHITE ELEPHANTS.

An interesting question which came up in Madras Council last week is the auctioning of the huge towers which were employed in the construction of the Mettur Dam. The antecedents of this question are far from happy to contemplate. The towers were bought at a huge cost of Rs. 20 lakhs; and when some protests were made against such a large outlay, the Government held out the assurance that the towers would be found to be useful in other projects of a similar nature which Government would have to embark on. But such projects, far from being initiated, are being fast abandoned. At one time it looked as though the province would find a use for these steel towers in the Tungabhadra project. But the project is apparently not to be. Political and financial considerations, which can appeal only to the Government, are weighing heavily on the scales against the project. And the Government have had to acknowledge that the only way of disposing of these towers is to auction them off in the open market. One knows what a free market there is for wares of this kind. The engineering companies, who can find a use for such things, can co-operate, when the need arises, to deadly effect. The upshot of this auction business is not known yet. But judging from the interpellations, it would appear that forms and other particulars were not sent in reply to certain enquiries —a very trifling matter, indeed, in auctioning a steel tower for which the likely purchasers all the world over could be counted on one's fingers. So that Madras goes one better than Bengal, whose dredgers, the reputed white elephants, have nothing to show beside the steel towers of the Southern Presidency!

INDO-COMMERCIAL BANK

Eavesdropper writes:

The Indo-Commercial Bank is a recent entrant to South Indian banking world; but its growth has been heady. Its affairs are in charge of Mr. Sankaralinga Iyer who belongs to a family of ancient indigenous Brahmin bankers. The paid-up capital has been recently increased to Rs. 4.85 lakhs. Deposits at Rs. 46.80 lakhs are an index of the credit it commands. This is the more remarkable as its Head Office is in a mofussil town which can hardly be described as a business centre. Government securities held by the Bank are Rs. 19.42 lakhs. Cash stands at the substantial figure of Rs. 5.22 lakhs. The liquid assets are thus nearly Rs. 25 lakhs, which works out to over 50 per cent. of deposits. There are no bad debts nor debts due by Directors—a pleasing feature. Net profit at Rs. 75,723 is quite satisfactory. The dividend distribution was 6 per cent. for the first half-year and 7½ per cent. for the second half-year. I learn that a new issue of shares was made at a premium of Rs. 3 per share to existing shareholders and has been fully subscribed for. If the Bank were to make any further issue, I suggest that the premium at which the shares should be made available, must be at least Rs. 25. Why need one under-rate oneself?

As Good To-day as
in the Good Old Days

Clive Street Gossip

DEWAR'S
"White Label"
WHISKY
As Good To-day as
in the Good Old Days

Two remarkable documents received by me this week have served as a reminder that the fortnight which I spent in vivacious Bombay has so far failed to evoke a lively gossip. It is not Bombay's fault. It is, I own, entirely mine. Bombay is even more puckish and more full of thrill than ever. It is my custom during my sojourn in the Western Capital to spend an hour every day in my old office in A. D. Shroff's room ; and half an hour amongst my old stock exchange friends. As I used to sit or hustle about in the vicinity of Dalal Street, I was reminded, in my last stay, of the hectic days of 1919 and 1920, when Currimbhoys and Mangaldas shot up nearly Rs. 1,000 in a day and when Bombay Trams spurted from Rs. 800 to 1,400 in less than four hours. Tata Steel shares were, in recent weeks, a giddy market. Prices flared up. Brokers and sub-brokers flitted hither and thither like madmen. Every little space outside the bazar was occupied by professional and amateur speculators who could not enter the sacred precincts. The assistants, brandishing their badges permitting them to enter the bazar, were hoarse with shouting and exhausted with perspiration. The share market in Bombay was animated as I had never seen it for a dozen years. Most other sections were booming, too. Selected mill shares were in good demand. Cement shares and hydro-electrics were priced both by *bona-fide* investors and by the usual gamblers. Banks and insurance shares have advanced with rising giltedge prices. Transactions in Government paper aggregate a crore a day. The famished brokers of yesterday are again being well fed. Hawkers and beggars have received due scent of this ; and the approaches to the bazar swarm with them. It has always seemed to me that the best indication of the prosperity or otherwise of the Bombay Stock Exchange is the average daily collection of an average beggar. If prices are on the upward grade and everyone is jubilant, a four anna piece is kindly thrown at the beggar that catches one's eye. I have also known days when the four anna bit yielded place to a copper coin. I was pleased to find that both the hawker and the beggar were wreathed in smiles. This is the happiest sign.

As I have already said in an earlier issue, Bombay has been rapidly developing its overseas business. Bullion and cotton on an international basis are feeding an army. Stocks and shares are now bought and sold with all the facility and celerity which world telephonic communication has made possible. With the large under-writing which Messrs. Batliwala and Karani used to do in my days, they had a roaring business. Under-writing is now a rare phenomenon. But they have developed a big international business as between India on the one hand, and New York and London on the other, and a growing internal business as between distant centres like Madras and Calcutta. They have now the biggest turnover ; but what Batliwala and Karani have done on a big scale, many others have done on different scales. The number of trunk telephones put through from Bombay or to Bombay in the last six months has shown an increase of anything like 500 per cent. compared to what they were two years ago. Some of the leading brokers in Bombay pay telephone bills as much as Rs. 5,000 a month. Sir Frank Noyce's best friend is the lively share broker of Dalal Street. It is time to take steps to relieve the congestion in the trunk lines and to enable long distance calls to be put through without long waiting.

Apart from the fun which I had as an on-looker of a frenzied share bazar, I had my time fully taken up with countless social engagements which have ever proved a severe tax on my time, my stomach and my head. Bombay knew me as a bachelor ; for the first time it saw me with a wife. The social fixtures were even more numerous and more pressing than usual. Thanks, many thanks, dear friends, for the great cheer you gave us. I should particularly mention good old Maganlal, blunt Jeevanlal and cheery Rajan. I should also record, with gratefulness, the party which Mr. Manu Subedar as the President of the Indian Merchants' Chamber was kind enough to give me—the first function of this kind with which I have been honoured. Too great an honour for my modesty!

The Travancore National Bank, whose alert Secretary is a nephew of my old friend, Mr. A. Rangaswami Iyengar of the *Hindu,* was insistent that I should attend an At Home given by them to me ; and I was happy to pay tribute to the valiant work of one of the important units of the Small Ten of South India. Last but not least, the hospitality of Rajan was over-whelming. He reminds me of an incident in the early years of my life. The Imperial Bank was asked for a reference about me by someone in Madras. The reply was that I was considered one of the keenest and most adventurous amongst the new entrants to the stock exchange world. Note the word *adventurous*. There was a suggestion of the adventurer ; and for one who started his career without any financial backing, the description was not inaccurate. Amongst the publicity consultants of India, Mr. Rajan is adventurous. He is, thank God, a Bohemian as I love most of my friends to be ; he is not, God be praised again, an adventurer as I would not wish my worst enemies to be so described. The railways owe much to the propaganda he has done for popularising advertisements in all the directions which railways lend themselves to. The Mysore State is the only State which has an intelligent and effective publicity campaign for its trades and its industries,

for its achievements and its activities ; and Mr. Rajan has been the channel through which all this publicity has reached the public.

As I dictate my gossip, my memory has a knack of playing strange and curious tricks. The seat of memory was tickled by two reports that I have received ; but the reports themselves have been, I find, forgotten. They are the speech of Manu Subedar, the incoming President of the Merchant's Chamber ; and the memorandum of the Bombay Shareholders' Association on the managing agency system. I see the Roman hand of Jugmohandas Kapadia in every line of the Shareholders' Association document, which, while I do not agree with whatever is said there, is by far one of the most thought-provoking statements I have read. Mr. Sushil Sen, the special officer dealing with Company Reform, must find great food for thought and for further enquiry. I shall rest content with this preliminary encomium ; and hope to revert to Kapadia's memorandum at more leisure and in greater detail. For, the speech of Manu must be dealt with this week ; and I would need all the space that is allotted to me.

The speech of the new President is up to the high standard which one would have expected from an economist of the standing of Mr. Subedar. It is good vigorous thought expressed in good vigorous English. Manu is nothing if he is not direct and vehement. At the same time, vehemence does not mean distorted proportion. If vehemence and balance are combined, the appeal is irresistible and the emphasis is well-poised. He reminds the public that the real criterion for the safeguards is that laid down in the Gandhi-Irwin Pact, namely, that they must be demonstrably in the interests of India. No one objects to safeguards as such. On the principle of the necessity of safeguards every one is agreed. What is galling and humiliating in this whole business is the spirit in which the safeguards have been devised and the methods by which they will be enforced. Looking at the matter from the criterion which Mr. Subedar has reiterated, he concludes that the fact that these safeguards have been increased in number and strengthened in terms and that reserve powers have been created so as to prevent ostensible legislative and administrative discrimination but practically everything else, makes a travesty of the constitution. The constitution now proposed should, therefore, be regarded as having been imposed on India. It is totally different from what has been asked for. Mr. Subedar is, at the same time, conscious that the offer of such a constitution is a measure of India's disunity and backwardness.

The President makes out some interesting points in connection with the need for economic planning. The fixed economic notions of every nation in the world have been uprooted. "Free trade countries like the United Kingdom have embraced protection and have raised, under the title of safeguards, enormous Tariff walls. On the plea of securing the home market to home producers, they have set up quotas for the import of non-British material." While there has been this general upset and while each country has refashioned its economic policy and programme according to the new world that has arisen, the Indian Government have not deemed it necessary to appreciate the Indian situation on its own merits. Lack of real understanding of the problem has, naturally enough, resulted in a policy of drift, a total absence of any planning. In this regard Mr. Subedar has no illusions. He realises that human wit could not devise

a programme that would be good for all times and would be realised in all details. But, as he sarcastically says, we are still in the elementary stage, where we have to persuade the Government and the country to accept the need of such a programme.

Once the need for a plan is realised, the first question that should engage our attention is the Indian tariff system. Mr. Subedar's treatment of the tariff system is magnificent in diction and argument, in facts and conclusions. "We find traces of every idea that has struck the Government of the country in that schedule ; but what we cannot find, because it does not exist there, is a scientific grasp of the situation in correlation to a definite economic whole." Turning to the Reserve Bank which is now an accomplished fact, he regretfully refers to the non-realisation in the final scheme of the ideas which he and people of his way of thinking urged. Nor is he enthusiastic about the first Board of Directors. In this matter I would differ entirely from Mr. Subedar. The composition of the first Board is one on which the Government do deserve to be congratulated. They have brought together as fine a team as is possible in India. There are at least four or five members of that Board who will exercise such influence and have such a big say that the country may rely upon the functioning of that Board in a way that will prove beneficial to India. I am glad, however, that Mr. Subedar is satisfied that in Sir Osborne Smith as the Governor, the Bank has a strong man.

Just at the time of going to press, I was shocked to hear of the death, under tragic circumstances, of Mr. A. C. Chatterji. He was in Reuters till 1929 ; he joined the League of Nations at Geneva after leaving Reuters. Everyone was old Chatterji's friend and he had not an enemy in the whole world. The most genial of men, the most helpful of friends, Chatterji was popular with everyone he came in contact with. Mrs. Chatterji was on par with her husband in every attribute of mind and personality, of heat and understanding. To Mrs. Chatterji, the son who is the Agent of the Imperial Bank in Mussorrie and her two charming daughters, I offer the consolation that arises from the thought that everyone of their friends shares the cruel pang.

The slip-shod proof-reader is a menace to the prestige and revenue of a journal. Last week saw a terrible mishap of this kind in the Advertisement of the *Ananda Vikatan*. Its circulation was described as exceeding 35,000. It was in excess of 40,000 as long ago as a year. It is, today, in excess of 53,000. More important than even its circulation, which is arresting enough, the *Vikatan* is the one paper which reaches every Tamil home. We, husbands, are not the real repositories of purchasing power ; it is the wives who make most of the buying or coax or coerce us into most of the buying. And every Tamil wife reads the *Vikatan*. She does not hanker for jewellery half as much as she does for her weekly copy of this great mirth-maker.

AS MUCH AFRAID OF A FALL AS A FEATHER

A Godrej Safe with all its ponderous weight is as much afraid of a fall as a feather. Read below what the Quilon Bank says. This has been proved time and again. The other day a Godrej Safe was caught in a terrible fire and fell four floors to the ground on the hard stone pavement without any harm coming to it.

THIS PATENT 16-BEND
JOINTLESS
GODREJ SAFE

has no joints in it that could be broken by a fall or by burglars. The entire body of Safe is made out of a single continuous plate by bending at 16 different places. Also, double-bending of front flanges to form jointless door-frame makes both the body and the door-frame immensely strong against breaking by fall or wedging by burglars.

THE QUILON BANK, LIMITED.

Madras, 14th July, 1934.

Messrs. GODREJ & BOYCE MFG. CO., LTD., MADRAS.

DEAR SIRS,

Our Mysore Agent informs us that the big fireproof **Godrej Safe, weighing nearly 20 railway maunds,** which we recently purchased from you for that Branch, was being hauled up by means of pulleys and ropes at our Mysore premises when the chains broke accidentally and the Safe **fell down from the second floor, from a height of nearly 30 ft.** But, we are very happy to inform you that but for two small dents and a few scratches to the paint, there was **not the slightest trace of damage to your Safe.** This is evidently due to the jointless body construction and the immense strength, which you justly claim for your safes.

Wishing you every success.

Very truly yours,
Sd. THOMAS JACOB,
Agent.

OLYMPUS

(From Our Correspondent)

New Delhi Feb. 5.

The first estimate I made of the debating ability of the present Assembly was after I had attended the poor debate on the first day on the Indo-British Pact. While, broadly speaking, the expression still persists, the debate certainly reached, as high a level as any before, on the concluding day and earned for the present Assembly the title of a good debating body. And the discussion on the J. P. C. Report inaugurated yesterday only further confirms this opinion. But for all that the present Assembly, on the whole, does not come up to the standard of the days of Motilal, inspite of the fact that in Mr. Bulabai Desai opposition has a leader as brilliant as ever came to the House and in Mr. Jinnah a most skilful debator.

* * *

The house, is particularly poor in financial and economic matters and also lacks somewhat in stamina. For instance, the announcement was made this morning of the restoration of salary cuts. I know a number of members considered the desirability of moving an adjournment motion censuring Government for this one-sided decision and one may be certain that if such a motion was brought forward even the European group would have backed it. But every member felt that by moving it he would become unpopular with the numerous Government servants and the more so as quite a number of them are voters!

* * *

Sir James Grigg kept his secret very well and not a whisper had been heard about it before the announcement was made. The Assembly tried to kick up some dust through supplementary questions but Sir James Grigg refused even to admit, what was obvious, that finances of Government have improved to such an extent that such a step is justified. Probably the Finance Member does not want to say more lest it should reduce the effect of his budget speech. But the fact that the Railway budget had to be framed in advance took the wind out of his sails and it may be that partly, at any rate, Sir Joseph Bhore and Mr. P. R. Rau will have to face the Assembly debates in justification for the decision taken.

* * *

That the opposition in the House cannot be lightly dismissed was proved effectively to-day when the first non-official resolution moved by Mr. B. Das was carried by a majority of 18 votes. The proposal was to lift the ban against Khurai Khitmatgars and the entire non-official elected section supported it. I have no doubt that the same solidarity will be maintained on most of the questions which do not raise communal issues.

* * *

Thus when the question comes up of voting demands for the Railway Board the Assembly is sure to launch a big debate on the proposed Statutory Railway Authority. The feeling in the Assembly quarters is that this has been done because the Government was sure that the present Assembly will not let the Authority be invested with the powers which are proposed for it by the British Government An Official, however, told me that the real reason is that British commercial opinion felt so strongly that the provision should be put in the act of Parliament that the Secretary of State had to yield. Any way, whatever the reason behind it, the fact remains that the opinion of even the last Assembly has been flouted.

* * *

Bengal seems to have come to its own in the Assembly. Not only is the president of the house drawn from the province but also its Deputy President. Congress Party certainly had a chance of putting through its own nominee especially as Government was not likely to oppose a Congress candidate. There was also a strong section in the Party which, for political reasons, wished Mr. Venkatachalam Chetty to be elected Deputy President as an answer to the electoral challenge of Sir Shanmukham.

* * *

Mr. Bulabhai Desai took a firm stand and would not have any party nominee. He said Congress Party must not let it appear that it was hankering after office. His word prevailed. The question then arose as to who should be backed. Just as Government extended its patronage to the Independents for the sake of obliging them by voting for their nominee to the Chair, the Congress Party decided to back the little Nationalist Group in return for its resolve to stand by the Congress.

* * *

This little party was advised by Pandit Malaviya to put up Mr. Akhil Chunder Dutt because Bengal had stood by the Pandit out of all the provinces of India and had sent in real representatives of Hindu opinion. The claims of other provinces were set aside and even Sardar Sant Singh who had a very strong claim to the honour was asked to submit to this wish of the Pandit. The result is that Bengal has the proud privilege of supplying the Assembly both its President and Deputy President.

* * *

I am told there has been a little tug-of-war in the Executive Council of the Viceroy over the attitude they should take in the J. P. C. debate. Sir N. N. Sircar and Sir James Grigg are stated to have taken one view and Sir Fazli Hussain and Sir Henry Craik another. The Secretary of State who, originally, was strongly for neutrality, yielded to representations made by Delhi and gave the Government of India full discretion to act as it likes.

* * *

Mr. Jinnah has cleverly exploited the occasion by placing both the Government and the Congress on the horns of a dilemma. His proposition is one that neither side can accept totally. In parts it may appeal to them. And if voting is part by part Mr. Jinnah makes both the sides eat the humble pie. But the Congress comes out better than the Government because at least Mr. Jinnah's resolution means an unqualified condemnation of the J. P. C. Report, even though it is a most dangerous proposal in that it accepts provincial autonomy and scraps Federation, thereby endorsing the view taken by the communalists throughout the London discussions.

* * *

This situation may be big with potential danger but for the fact that there is no chance of the Government abandoning the scheme because of the Assembly vote and Mr. Jinnah has proved his *bona fides* by beginning 'unity' talks with the Congress President. The timely arrival of His Highness the Aga Khan is also a factor of importance and it seems that the unexpected may happen and some communal settlement may be arrived at even now. But I would not hazard a forecast on the subject.

* * *

I would conclude these notes by noticing the astounding proposition made by Sir Joseph Bhore in the Assembly that the Department of Agriculture represents agriculture and that Sir Frank Noyce was a representative of labour. Mr. Joshi found his right challenged and immediately asked as to why commercial representatives had been called when the Commerce Member could speak for them. Sir Joseph Bhore apparently had not thought of that and refused to answer. The Commerce Member, however left the House in no doubt that Government of India alone had the constitutional right of entering into agreements and would not be guided by the verdict of the Assembly.

PUBLICATIONS OF THE LEAGUE OF NATIONS

JUST OUT; **"STATISTICAL YEAR-BOOK OF THE LEAGUE OF NATIONS" 1933-34**

270 pages ... ... in wrappers Rs. 6 14 0
in cloth Rs. 8 8 0

This is the most complete and authoritative international compilation of official statistics regarding the economic, financial and social activities and the population of all the countries of the world.

These statistics including Vital Statistics, Labour Conditions, Production, International Trade and Balances of Payments, Transport, Public Finance, Monetary and Banking Statistics, Prices, Conversion coefficients for weights, measures and currencies, have been brought up to the end of 1933 or the beginning of 1934 and have been reduced, whenever desirable, to a common measure.

The present edition marks an improvement on its predecessor in the abundance of its information on various matters of great topical interest, such as public finance and the distribution of population by age, groups and occupations, etc. Another new feature consists of the tables on the production and use of nitrogen and of index-numbers of employment.

"REVIEW OF WORLD TRADE", 1933

A presentation and analysis of world trade in 1933 — about 60 pages ... ... Price Rs. 1 12 0

This volume compares the trade of the world of continental groups and of individual countries in 1933 and in recent years. It shows the contribution of each country to the total, the changes in the direction of trade and in the relative importance of the groups of commodities of which it is composed. The analysis demonstrates that, while the value of trade diminished again in 1933, the quantum increased, mainly owing to the larger exports of raw materials; exports of manufactured products were, however, also slightly higher than in 1932. Special attention is devoted to the trade in the most important crude materials and foodstuffs. An annex contains revised indices of the prices and quantum of the trade of individual countries.

NO REMISSION OF LAND REVENUE

(FROM OUR CORRESPONDENT)

Madras, Feb. 5.

Another week of dreary, dull routine in the Council with but one consolation, that it is the calm before the storm of the Budget Session. The rumblings are there already in the shape of the motion demanding the remission of land revenue by 33⅓ per cent. and the Government's *communique* announcing the decision not to accept such a resolution, together with the reasons for such a decision. There is also a string of questions in the Council regarding conditions in the drought-stricken areas and the measures which the Government have adopted to relieve the distress in such areas. The Members from the Andhra Districts have naturally been very active during question time. By all accounts, the distress in the areas which they represent is very acute. Nature, in her present mood, would seem to have made no distinction between man and beast. Both are alike short of foodstuffs. The available supply of fodder is totally inadequate to the needs. There is hardly any for people to scramble for. The position is, perhaps, even worse in regard to crops. The Government have, therefore, been called upon to make a clear statement as to what they have so far done and what they propose to do in the future.

The procedure of the Government in these matters seems to be very simple. It is part of the routine duties of the revenue officers to report on the conditions in the various areas and it is for Government to decide whether there is a case for the institution of test works. The idea underlying these test works is to find whether the distress is so acute as to impel men and women to work for wages which in ordinary times would have been no temptation at all. In other words, the wages offered on such works are so low that only famine-stricken people would agree to take them. If the response to such test works is great, then the Government have to conclude that the conditions in the areas warrant the introduction of measures for relief of famine. It would appear from the replies afforded by the Revenue Member to the interpellations of Councillors that in more than one district such test works have been instituted and that the response is very considerable. Under the provisions of the Famine Code, the Government, it would appear, have no option but to institute relief works. Grants are being made to the District Boards for the purpose ; and it is expected that the provision of employment by the institution of such public works will reduce the distress in these areas. It is also learned that Government are taking special measures to provide fodder for the cattle. In one district the Forest Department has been directed to despatch large quantities of hill grass for the consumption of cattle in the areas stricken by the drought.

The economic outlook of South India seems at the moment to be growing in bloom. Some time ago, when the Mettur project had just been inaugurated, I was prone to stress the vast possibilities of industrial progress which this project opened up and to conjure up visions of a country in which a fair balance will have been achieved between agriculture and industry—a balance which would not involve a reduction of output in either. But now the drought would seem to have made a great deal of difference. After all, when we think of it, there is a severe limit to the sufferings of the masses in a country with a simple agricultural and rural economy. What matter, one might say, if prices fall, when the cultivator is in large part the producer of the primary necessaries of life. But this line of reasoning is valid only so long as Mother Earth yields her bounties. But when the soil proves sterile and the crops fail, the sufferings of the people are unspeakable. At the moment one is thinking of the relief measures that are necessary for the affected areas. But, doubtless, there must be a long chain of consequences which leads God knows where. It is not inconceivable that the budget of the provincial government for 1933-36 shows the adverse effects of the failure of the crop in many districts. There might be, for aught we know, a curtailment of expenditure, not on the lines on which a popular Member of the Council might wish it, but on lines which might serve to put back the essential tasks of nation-building. In that case, many a useful activity might be curtailed.

One might think that I have all of a sudden caught a chilling pessimism. But there is at the moment no escape from such an attitude. The figures of the foreign trade of Madras for the year 1934, which have just now become available, add yet another patch of darkness to this sombre landscape. However much one might despise the crude mercantilism of believers in popular forms of economic nationalism, it is difficult not to feel discouraged by the sight of drooping exports and increasing imports. This depressing tale is well told in the following table :—

		Imports Rs.	Exports Rs.
1929	...	1,86,82,330	2,59,62,550
1930	...	1,37,51,533	2,35,36,737
1931	...	1,08,22,087	2,05,09,181
1932	...	1,08,45,077	1,20,62,317
1933	...	1,20,62,317	2,00,12,435
1934	...	1,57,89,764	1,50,06,639

The staple exports of Madras have all of them decreased during the year. Groundnuts, which, by the way, are now under the cloud of the failure of one of the largest exporting firms, record a fall, during the year, of over 30 lakhs. Leather comes as a good second with a shortfall of 16½ lakhs. While the decrease is so large, the increase recorded under raw cotton, castor seed, Manganese ore and spices are only for paltry sums of 6 lakhs, 6 lakhs, 4¾ lakhs and 2 lakhs respectively. On the imports side, rice accounts for more than 36 lakhs of increase, all the other items making only about 3 lakhs. Speaking of rice, it may, perhaps, be added here that it was stated by the Government in a reply to an interpellation that the imports of Siamese rice have far from ceased and that 5,735 tons of rice valued at Rs. 4,07,000 were imported in this Presidency during the fortnight ending 15th January, 1935.

No review of the week would be complete without referring to the *communique* of the Government stating the reasons which impelled them not to accept the resolutions of the local Council asking them for "a remission of not less than 33 1/3 per cent. in land revenue kists in respect of wet and dry land inclusive of water rates for the current *Fasli, i.e.,* 1934, except in the case of famine affected areas where full remission is absolutely necessary." It will be remembered that the resolution also insisted that "Anantapur District deserves special consideration apart from other districts in the Presidency and that in the case of districts which have been resettled, the increase due to resettlement shall also be suspended." According to the Government, those who voted for this motion did not realise adequately the implications of this resolution. They are anxious, therefore, that such implications should be brought home to the public, so that the reason behind the Government's *communique* will be fully understood. The *communique* points out that the acceptance of the resolution by the Government would involve a loss of land revenue in the current *fasli* of Rs. 3,71,36,509. This would mean that, far from the province closing the account for 1935-36 with any surplus and an opening balance in the new year on

OLD COURT HOUSE CORNER
CALCUTTA

THE GATEWAY OF INDIA

(FROM OUR CORRESPONDENT)

The great event of the week in Bombay was the tragic death of Mr. H. C. Whitehouse, the well-known manager of Messrs. Strauss & Co., Ltd., the exporters of seeds and grains. For some time past, Strauss and Co. were buying heavily in a rising Bombay market and selling in foreign markets where conditions were more or less steady. Mr. Whitehouse immediately before his death began to sell in Bombay, a policy which would seem to be wise under the circumstances. Then, suddenly he received a cable from London ordering him to stop all transactions and to suspend payment. Mr. Whitehouse himself was unaware of the crisis and naturally was placed in a very awkward position. His tragic end has cast a gloom over the whole of the business community.

This incident is bound to have wide repercussions in markets outside Bombay also. Frantic cables are pouring in from abroad asking for full details. The exact amount of the losses suffered by brokers and grain merchants as a result of the failure of Strauss & Co. are difficult to ascertain at this stage. It is gratifying, under the circumstances, to note that the Bombay market did not have a serious setback in consequence of this shock.

The trouble in the textile industry at Ahmedabad is still smouldering. A few of the mills where the labourers went on strike are resuming work. But many are still idle. The Mill-owners' Association and the Labour Union are trying to counteract the mischievous propaganda carried on by socialists and communists and have already achieved a certain amount of success. It is worth noting, however, that the trouble emanated from the mills which are not affiliated to the Millowners' Association and whose workers are not members of the Labour Union. This is probably a strong argument for the necessity of all mills being under the Millowners' Association. Even a single recalcitrant mill outside the Association is capable of causing a great deal of mischief. The Government also have been quick in taking action and the ban on the assembly of persons has obviously borne fruit. The sponsors of the trouble led the workers to hope that they could bring about a revision of the terms of the Delhi Agreement. But it will be admitted that the Delhi Agreement was arrived at in a true spirit of compromise and both sides agreed to sacrifices without which the agreement would not have been possible. Mr. Gandhi, also, in a message to the workers, has appealed to them not to undo the good effect of the Agreement and to resume work. There are signs that the trouble is dwindling and I hope that next week I shall be able to sound the "all-clear" for the textile area.

Bombay has paid the Government of Bengal a compliment by allowing the duty on electric energy and enhanced court fees and stamp duties to continue for another year. There is a strange fraternity between provincial governments in the matter of taxation, though in other matters they have not been friendly with each other. The Government of Bombay also proposes to exercise a strict supervision to detect and punish evasions of the stamp duty. It is proposed to levy duty at the flat rate of 12 annas per every Rs. 100 or a part thereof of the value of a share or debenture. This would bring the charges in line with those in force in Calcutta and Madras.

The councillors who entered the municipal corporation on Congress tickets have agreed to form a National Municipal party with a view to devote their attention to a practical programme of civic betterment based on economy and efficiency. While they do not propose to leave the Congress fold, they will not be rigidly tied to any pledges or rules of the Congress. This may sound like changing one's political complexion but it is time that politics was separated from a sense of civic duty. A councillor who helps in the civic advancement of a city deserves the thanks of the citizens whether he hails from the Congress camp or from any other political camp in the country.

Once more the Indian Merchant's Chamber, in the person of Mr. Manu Subedar, its new President, made out a strong case for revision of the Indian tariff system. There was really nothing new in what he said, because the ground has been covered by every representative Indian commercial body. Reiteration in this instance indicated at an appropriate time the grave disabilities of the system from the national point of view. So long ago as 1916 the Industries Commission recommended a policy of increasing industrialisation as opportunity arose. Twenty years have passed and the Indian tariff, in relation to indigenous industries, remains a drag on industrial enterprise. The schedule of Indian tariffs operating at the present time had, Mr. Subedar pointed out, grown up without a design, except that of raising revenue. The official machinery for granting protection to Indian industries, when they are assailed not only by normal competition, but by subsidised onslaught, favoured by exchange, needs reconstruction and Mr. Subedar suggested a system in which economic and financial issues were well balanced. There is no validity, Mr. Subedar stressed, in the contention that industrialisation affects agriculture adversely. "The best friend of the Indian agriculturist is the Indian industrialist who can offer a ready home market at all times." In advocating a trade settlement with Maritime States, Mr. Subedar said that the present situation benefitted neither the business community of the States nor of British India. A settlement would remove complicated customs barriers which obstruct trade and divert it to uneconomic channels. A settlement would soon be arrived at, were the question removed from the purview of the political department and made over to the Economic Committee of the Central Legislature.

SOUTH INDIA

(*Continued from page 431*)

the right side, there would be in the current year a deficit of 2½ crores and an overdraft from the Government of India of 33 lakhs. If the same measure of relief for land is to be continued for the coming year, the province would be involved in a deficit of 2,71 lakhs and the overdraft on the Government of India would have to be increased from 33 lakhs to 304 lakhs as at the end of 1935-36. The rest of the Government's argument may easily be imagined. The *communique* makes out that the incidence of all this cut in land revenue and expenditure would have to be borne by those departments in which the public are directly interested. The Government want the people to imagine what moneys will be available for roads and bridges, village communications and water supply, schools and hospitals and dispensaries for which large grants are now made from provincial revenues. They suggest that, if remissions are to be granted, the scale of expenditure would have to be brought down to 12½ crores against the existing amount of 16½ crores and that the resolution would, therefore, involve retrogression in every sphere of existing Governmental activity. They also add that there would have to be "a disbandment on a large scale of existing establishments thereby increasing still further unemployment among the educated classes." If the Government case in this matter is easily imaginable, the answer to it may be said to be obvious. For every one, surely, knows that when the Council recommends remission of land revenue, it does not intend that the incidence of this cut should fall on the nation-building departments. If the Government are not prepared to bring down the expenditure of the Administration to the level of our capacity, they ought at least to refrain from insulting the public intelligence by suggesting that considerations of employment stand in the way of the remission of land revenue. The addition to unemployment consequent on the "disbandment" would be but a drop in the ocean. And as the vernacular saying goes, to the novice in swimming it matters nothing whether the water is two feet over his head or twenty.

NEW MONETARY POLICY IN FRANCE

THE FOURFOLD OBJECT

FRANC MAY BECOME MORE VULNERABLE

BY PAUL EINZIG

(By Air Mail)

(Special for Indian Finance)

[*The following article is the first complete account of France's new monetary policy, garbled reports of which have hindered, rather than helped, its understanding. The somewhat contradictory statements of the Finance Minister and the Premier, the emphasis on the technical character of the changes, and the inadequacy of these measures are new points which, not to speak of Dr. Einzig's analysis of the prospects, invest the article with a special interest.*]

Nearly four weeks have passed since the financial world was startled by the announcement of the summary dismissal of M. Clément Moret, Governor of the Bank of France, and the inauguration of a new fresh monetary policy amounting to the abandonment of the orthodox principles hitherto pursued. Although four weeks is too short a period to enable us to form a definite judgment about the effects of that policy, it is, nevertheless, possible to form a general opinion as to its prospects.

The object of the new French monetary policy is fourfold.

(1) To facilitate the Treasury's task of raising funds for covering budgetary deficits, temporarily or otherwise.

(2) To improve the technical facilities of the Paris money market, and to increase its elasticity.

(3) To reduce the abnormal discrepancy between long term and short term loan rates through lowering the former.

(4) To induce hoarded capital to leave its hiding places and return to the market.

These are the declared objects of the new policy. On the surface they appear harmless enough ; and the French authorities have been at pains to emphasise that the whle change is purely technical and will not affect the fundamental principles of the French monetary policy. Indeed, to allay suspicions of reflationary tendencies in official quarters, M. Germain Martin, the Finance Minister, emphasised in the course of a recent debate in the Chamber of Deputies, that, as before, the Government aim at cutting expenditure and lowering costs. This is meant to convey the impression that the Government intend to continue to deflate, notwithstanding statements to the contrary made by the Prime-Minister, M. Flandin, in November last, and notwithstanding this unorthodox change in the monetary policy decided upon in the new year.

Of the fourfold task, which the new policy is meant to achieve, the first, that of enabling the Treasury to cover budgetary deficit is the easiest to realise. Up to now, the absorbing capacity of the market for Treasury Bills has been limited. It was practically confined to the three leading banks, the Crédit Lyonnais, the Société Générale, and Comptoir National d'Escompte. The extent, to which it was possible to place Treasury Bills outside these three banks, was negligible. Since Treasury bills were not eligible for re-discount, considerations of liquidity prevented these banks from taking up really large amounts. Now that M. Tannery, the new Governor of the Bank of France, has declared himself willing to admit Treasury Bills for re-discount, this obstacle exists no longer. It is reasonable to assume, therefore, that, whenever the Treasury requires funds, the banks will be willing to take up Treasury bills to a larger extent than in the past. What is more, if the banks are unwilling to do so, or what is more probable, if they try to drive too hard a bargain, there is nothing to prevent the Treasury from placing its bills direct with the Bank of France. Preparations are, in fact, already being made, to enable the Treasury to take advantage of the new facilities. The authorised maximum of Treasury bill issue (whose reduction from 12 milliard Francs to 10 milliard francs was announced triumphantly last September as one of the greatest achievements of the Government of National Union) has been increased from 10 milliard francs to 15 milliard francs. It is pointed out that the additional 5 milliard francs are only required to tide over seasonal scarcity of funds, pending the receipt of taxation revenue in the autumn. Considering, however, that the Treasury will have to find something like 12 milliards to 14 milliards in the course of 1935, for current requirements, this claim appears to be somewhat unconvincing. It is beyond doubt, however, that the new arrangement will facilitate the task of the Treasury in meeting the deficit. The question is whether in doing so, it will have to resort to straightforward inflation, or whether the improvement of the absorbing capacity of the Paris market, will obviate the necessity of falling back upon the Bank of France.

This brings us to the second task of the new policy, that of improving the technical facilities of the Paris market. Doubtless, if Treasury bills are eligible for re-discount, there is no reason why the banks should not invest in them part of their idle cash reserves, or alternatively,—as their present holdings of Treasury bills which hitherto have been ineligible, have now become eligible for re-discount, —place a large part of their idle cash reserves at the disposal of the market. It is also conceivable that in the changed situation Treasury bills will be acquired by other buyers, such as smaller banks, private banking firms, insurance companies, and large commercial and industrial firms. A market, in the real sense of the term, might develop in Treasury bills ; and the Treasury, would no longer be dependent entirely upon the three big banks. What is even more important, it will be possible for the Treasury to borrow without thereby reducing the amount of funds available for covering requirements to a corresponding extent.

The third task of the new policy is to reduce the discrepancy between short term and long term interest rates by lowering the latter. In this respect, the outlook is rather less promising than it appeared at the time of the announcement of the new policy. It is true that there was some rise in the market of Government securities, but the decline of their yield was, during the past four weeks, barely over ¼ per

cent. At the same time, short term money rates rose to a considerable degree. This is only natural since the idea in inaugurating the new policy was to divert Government borrowing from the market of long term loans to the market of short term loans. The anticipation of an additional 5 milliard francs of Treasury bill issue was, in itself, sufficient to cause a rise in money rates, and it is easy to imagine what will happen when the Treasury bills are actually issued. Even though facilities are improved, 5 milliards remains a large amount for the Paris market to absorb. There is also the psychological aspect of the changed policy to be considered. Few markets are so sensitive to the psychological factor as the Paris money market. The possibility of an increase in the Bank of France holdings of Government securities is in itself, sufficient to cause distrust, which again expresses itself in a rise of money rates. If the market is unable to absorb the additional 5 milliard francs and any further additions that might become necessary and, if, consequently, part of the Treasury bills are placed directly or indirectly with the Bank of France, money rates are bound to rise considerably. The discrepancy between short term and long term interest rates is thus being reduced, but not so much through lowering the latter as through raising the former.

There remains the last of the four tasks of the new policy to be considered. In putting forward the new scheme, the spokesmen of the French Government expressed their hope that it would result in a wholesale dis-hoarding of funds. Considering that the amount of hoarded gold and notes is somewhere between 40 and 50 milliard francs, this is a factor of first rate importance. It was expected that the mere announcement of the improved monetary methods would bring about a return of milliards to the market, which again would cause a rise in Government securities and a fall in short term interest rates. Up to the present, however, nothing of the kind has happened. Such rise as has occurred in Government securities was due to professional speculative buying more than anything else. The fact that provisions for the issue of 5 milliard francs of Treasury bills obviated the necessity for the Government to issue long term loans in the immediate future was, doubtless, a bull point for Government securities; and speculators did not hesitate to act upon it. There was, however, little or no sign of buying by the general public. It is, indeed, difficult to see why the new policy should inspire optimism to such a degree as to induce hoarders to dis-hoard on a large scale. The French public is nervous and distrustful in the extreme. Any departure from orthodoxy inspires distrust in France and can hardly be expected to lead to dis-hoarding.

In the circumstances, there is no reason for optimism as to the success of the French policy in bringing about a trade recovery through the reduction of long term interest rates. That method of reflation, which was practised in Great Britain, is in itself in any case, insufficient to produce any noteworthy result on trade, unless it is accompanied by a depreciation of the currency or by expenditure on public works on a large scale. It is more probable that reflation in France will take place, not as a result of the success of the scheme, but through its failure. If the new policy leads to direct or indirect borrowing from the Bank of France, the reflation thus provoked may, to some degree, cause a rise in commodity prices, unless it is counteracted by a resumption of deflationary cuts in public and private expenditure. The chances are that, as a result of the new policy, the franc will become more vulnerable, and the day of its inevitable doom will draw nearer.

London, January 29, 1935.

BRITISH BANKS AND THE LABOUR PARTY

THE NEW HOUSING BILL

BY FRANCIS WILLIAMS,

City Editor, The Daily Herald, London.

(By Air Mail)

Special for Indian Finance

The great joint stock banks, which have, ostensibly at least, kept out of politics in the past, are likely to jump right into the middle of the political arena during the next few months.

All the leading Bank Chairmen have this year made particular reference, in their annual speeches, to the Labour Party's proposals for the nationalisation of the banking system.

Their decision to do so has been inspired by the growing belief that the General Election may be fought towards the end of the present year and that one of the main points of issue during the Election will be whether or no the banks are to be nationalised.

Attacks on the Labour Party's policy by the Bank Chairmen themselves, represent, according to my information, only the beginning of a campaign which is now being prepared.

There is a possibility that very shortly the banks will jointly set up a fund for financing an anti-Labour propaganda on this matter. Any such propaganda is likely to include a short statement of what they regard as the main points against the nationalisation proposals which will be distributed throughout their branches and brought to the attention of all depositors. Other forms of propaganda may also be indulged in.

This, in turn, is likely to stimulate the Labour Party's attack upon the banks.

The Labour Party is absolutely committed by the rank and file of its members at Conference to nationalisation of the joint stock banks as the main plank of its programme ; and despite the fact, that some prominent members of the Party have publicly announced their dislike of the proposal, there is no likelihood whatever, I think, that the Labour Party will abandon its policy.

Instead, an attack on the Labour proposals by the banks is likely to draw forth much more concrete proposals for nationalisation than have yet been issued. The banks believe that they can frighten their 14,000,000 depositors into voting against the Labour Party so long as Bank nationalisation remains in the Party programme.

The Labour Party's case will, however, take the form of showing why a substantial alteration in the existing economic structure is necessary before permanent industrial recovery can be obtained and of pointing out that the banks cannot be left out of any large scheme of national planning.

The banks have also recently been subject to a considerable amount of non-Labour criticism, notably by some of the commissioners who were appointed by the Government to examine the problem of the derelict industrial areas and by spokesmen of small business interests, who declare that the small firm does not receive such favourable treatment from the banks as does the large City financier.

It is quite possible, therefore, that, if the banks force the question of nationalisation into the forefront by a propaganda campaign, they may find that it will recoil to their disadvantage.

The Government is now attempting to meet the criticism of its lack of initiative in housing by its new Housing Bill which is being discussed in Parliament this week.

This Bill, while it is being criticised by Local Authorities on certain points, notably because it restricts the ability of the Local Authorities to lend money on mortgage to private purchasers of houses, does make a definite advance in the Government's housing policy.

From the investor's point of view, it is important because it will lead to a substantial increase in orders for building materials.

Constructional firms experienced in the building of large blocks of flats are likely to benefit particularly ; and the Bill may be expected to stimulate further activity in building generally.

It is an indication that the Government realises that, apart from the social need for more housing development, building activity has provided the basis for a large part of the industrial revival in Great Britain.

To a large extent, however, the building development rests on low interest rates ; and a rise in interest rates might bring the present building boom to an end.

This is an additional reason why the Government is likely to continue for some time yet with its cheap money policy.

As regards exchange stabilisation, to which I have previously referred, the chances of anything concrete coming out of the British-French discussions which begin this week have been further removed by instability of the foreign exchange markets in consequence of the anxiety as to the U. S. Supreme Court's decision on the Gold Clause.

The Treasury, which takes a more objective view of international affairs than does the exchange speculator, has been amazed by the anxiety created over this matter, taking the view that it ought to have been obvious to any student of affairs that even, if the Supreme Court gave a judgment adverse to Mr. Roosevelt, he would take immediate steps to legalise his position and would not alter his policy.

The Treasury argues from this that, despite previous temporary stability in the exchanges, there is, and must remain for some time, a very serious underlying instability, which makes any sort of a permanent stabilisation agreement out of the question.

A PLEBISCITE FOR PUBLIC MEN

G. L. M.

[The recent Saar plebiscite has inspired in some the hope that Government might institute a similar plebiscite in this country enquiring whether they prefer (i) *status quo* or (ii) constitutional changes embodied in J. P. C. Report or (iii) Dominion Status or (iv) reversion to the Constitution of 1859. But there is no hope of the fulfilment of that hope. For our rulers do not believe that subject-peoples in the Empire are entitled to say what constitution they want, nor fit enough to know it. They, therefore, quite properly, ignore such clear verdicts of the electorate as in the case of Burma separation or in the recent Congress victories at the polls. Meanwhile, many of us desire to find out the views as well as the stock of information of our public men and leaders. The following questions are designed to elicit their opinions and estimate their fund of knowledge.]

1. (*a*) Do you like Sir Samuel Hoare? How many questions did he answer before the J. P. C.?
   (*b*) If you were forced to do so, whom would you be able to love more—Mr. Ramsay MacDonald or Lord Sankey ?
   (*c*) Who do you think is harder to die—Mr. Churchill or Lord Lloyd ?
   (*d*) Who is more responsible-minded and statesmanlike—Sir Tej Bahadur Sapru or Mr. Sastri? Which of them has a greater reservoir of co-operative strength?
2. (*a*) Did you read the J. P. C. Report before you found it extremely unsatisfactory and reactionary or as constituting a positive advance and eminently workable?
   (*b*) Even now, *quite honestly*, have you read it?
   (*c*) If you have, which portions do you consider the most boring and which the most provocative?
   (*d*) Is the Report more boring than (i) the White Paper and (ii) the R. T. C. Reports?
   (*e*) Name all the Reports from the time of the Minto-Morley reforms which have been described as the greatest State Document in Imperial history since the Durham Report.
   (*f*) Do you propose to read *the whole* of the Constitution Bill?
3. (*a*) Can you recount, without referring to the Report, *all* the safeguards prescribed by the J. P. C.?
   (*b*) Do they exceed the number of stars visible to the naked eye? Are there any invisible safeguards?
   (*c*) Do you consider that these safeguards are (i) lamp-posts? (ii) road beacons? (iii) barricades? (iv) blank walls? (v) manholes?
   (*d*) Can you discriminate between discrimination in form and discrimination in fact ? Which will lead to more recrimination?
4. Do you agree that
   (*a*) paramountcy is paramount ?
   (*b*) normalcy is normal?
   (*c*) electricity is electric?
   (*d*) primacy is primary?
   (*e*) autocracy is autocratic?
5. What would you choose to be in future (i) Minister in a province? (ii) Counsellor at the centre? (iii) Nominee of a Prince in the Federal Legislature? (iv) Director of Reserve Bank? (iv) Member of Statutory Railway Board?
   State your reasons fully and your qualifications (as seen by yourself) frankly.
6. Which is more binding and sacred (i) a promise to marry? (ii) a promise to re-pay? (iii) a promise to grant Dominion Status?
   Which of these can be broken, if made hastily, without qualms and without offending the moral susceptibilities of the Archbishop of Canterbury?
7. (i) Can you name all the present Governors of the various Indian Provinces including Burma?
   (ii) How many of them are officiating?
   (iii) How many of them are married?
   (iv) Whom would you, apart from yourself, select as the first batch of Indian Governors?
8. (i) Are you
   (*a*) a moderate nationalist ; (*b*) a nationalist independent ; (*c*) an independent moderate ; (*d*) a mere moderate ; (*e*) a sheer independent ; (*f*) an orthodox Gandhite ; (*g*) a Socialist Congressman ; (*h*) an Anti-Communal Award Nationalist Congressman ; (*i*) a neutrality-pledged Parliamentary Boardian?
   (ii) If not, what other label do you wear?
   (iii) Do you propose to start a new party? Will it be called a Centre Party?
9. Are you (if Muslim)
   (i) a United Muslim Leaguer ; (ii) a confirmed Yakubite ; (iii) a wavering Iqbalite? (iv) a pronounced Agakhanite?
   Which of these do you think will bring you personal benefits more immediately and assuredly?
10. Can you name the five
   (i) most reactionary public men
   (ii) most communalistic Ditto
   (iii) most sycophantic Ditto
   (iv) most unreliable Ditto
   in India to-day? (Replies will be treated strictly confidential).
11. Can you guess why papers are so excited about the Saar ? Where is Saar anyway ?
12. Do you understand exactly the difference between
   (i) A Reserve Bank and a Bank with Reserves?
   (ii) Sterling quality and quality of sterling?
   (iii) Japanese yen and Mr. Yen of China?
   (iv) Yellow metal and Yellow peril?
13. (*a*) Can you say off-hand what are the total exports of gold from India since September 1931?
   (*b*) Have you ever tried at all to understand the Ratio Question?
   (*c*) Does it disturb your sleep and do you get (i) dreams (ii) night-mares about it ?
14. Which of the following is more important for India at present:
   (i) Economic Planning ; (ii) Planned Economy ; (iii) Plan for Economic Recovery ; (iv) Five Years' Plan ; (v) Seven Years' Plan ; (vi) Planning for Planning ; (vii) Planning for the Planning of Planning (and so on *ad infinitum*)?
15. Would you prefer to participate in negotiations of a question or keep out of it for denouncing the agreement subsequently?
16. Have you been able to make out
   (i) whether Government consider Gandhiji's village uplift scheme to be utterly ridiculous or highly dangerous? (ii) whether the Anglo-Indian press regards Gandhiji's activities to be hopelessly crude and economically reactionary or extremely astute and politically revolutionary?
17. Which of the following do you consider worse:
   (*a*) the legal disabilities of women or the illegal abilities of men? (*b*) birth control by artificial means or berth control in railways by reservation on racial basis?
18. Would you like your wife to vote or to dote (on you, of course)?
19. If earthquakes are due to the sin of untouchability, to what social evils would you ascribe (*a*) famines, (*b*) floods, (*c*) epidemics, (*d*) cold wave?
20. Which would you rather be (*a*) a disillusioned Liberal or a disappointed Congressman? (*b*) a powerless minister or a helpless leader of the

OVERSEAS' NEWS: By Air Mail

GREAT BRITAIN

SPEECHES OF THE CHAIRMEN OF THE "BIG FIVE"

I am in a position partially to redeem my pledge about referring to the speeches of the Chairman of the 'Big Five.' These speeches generally contain a review of the financial and economic prospects before the country and coming from men of proved economic sagacity are a truer index of the state of progress than vague and diplomatic utterences from the Treasury benches.

Midland Bank:—

Mr. McKenna, the Chairman of the Midland Bank Ltd., began by refuting the proposition that State control or ownership makes for efficiency or stability. No one, who has even a redding acquaintance with the working of the 'Big Five,' can seriously lay the charge of inefficiency against any of them. But State control for banking is one of these pet propositions with which every ambitious statesman likes to play. Mr. McKenna completely established the plea that competitive joint-stock banking was the best and the safest system for England.

He attempted to answer a few other charges levelled against banking. In fact his speech was more or less like that of a K. C. holding a brief for the joint stock banks of Great Britain. His reply to the first charge namely that banking profits are excessive was hardly convincing. To claim that profits are not high in view of the market premiums on bank shares is arguing in a circle. The high market-price is a result of the high profits and can scarcely be a cause of the same. The charge that banks do make excessive profits has not, however, been sufficiently brought home to need serious refutation.

Mr. Mckenna's next defence was against rather a serious allegation that banks are unwilling or, at least, not sufficiently ready to advance money for the encouragement of trade and industry. The fact that most of the banks experienced a falling off in advances would seem to lend support to this view. This is an allegation that affects the very vitals of banking and Mr. Mckenna tried elaborately to prove that the charge is hollow and baseless. Advances form one of the most remunerative parts of a banker's business and, according to Mr. Mckenna, the banks have always kept their doors open to *bona fide* borrowers. While there can be little doubt that no banker would refuse a sage and profitable advance to businessmen, the British banking system is perhaps open to the charge that its lending policy is unduly conservative.

It is in this self-same phenomenon of falling advances that Mr. Mckenna finds the surest signs of recovery in Great Britain. With the exception of Barclay's Bank nearly all big banks have experienced a falling off in advances and have been compelled to increase their portfolio of gilt-edged securities as a means of earning profit. This is not due, according to Mr. Mckenna, to less money being used in trade but to a more liquid position in trade generally and in no way conflicts with the fact that a recovery has set in. This is a view with which many would disagree but nevertheless it is true that money conditions have been vary easy for some time in the past.

Mr. Mckenna goes on to support forcefully the monetary policy of the Government and it is perhaps here that he most palpably maintains his reputation of originality and heterodoxy. He has always been a champion of managed currency and last year he was the only one who had a good word to say about Mr. Roosevelt's fiscal policy. Why he should be so enamoured of the conservative and timid policy of the British Government is not obvious from his speech. He thinks that the policy of economic nationalism has not yet exhausted its possibilities and "emphatically dissents" from "the fatalistic conclusion" that the bound of internal recovery have been attained or even approached. In his opinion "so long as a large supply of efficient labour is unused and a large aggregate of elementary wants remains unsatisfied" there is always a possibility of further advance. Here he runs counter to the general consensus of opinion that only by freeing international trade can England look forward to that recovery to which she aspires and, which she attained and lost in the past.

Barclay's Bank.

Mr. Tuke, who presided at the annual meeting of Barclays Bank, was somewhat subdued coming as he did after his illustrious predecessor. He contented himself with dwelling on certain aspects of the balance sheet but his assertions in connection with them mark him out as an astute and sagacious banker. He deplored the preponderance of Treasury bills as opposed to commercial bills in the money market. Like Mr. Mckenna he challenged the allegation that banks are unwilling to lend but unlike Mr. Mckenna he thinks that further recovery is not possible without a stabilisation of currencies and a recovery in international trade. Barclays was one of the very few banks that experienced a slight increase in advances.

Martins Bank.

Martins Bank has come to be regarded as the Big Sixth in the banking world and the oration of the Chairman at the annual meeting of the bank is eagerly looked forward to by banking and financial circles. Mr. Orme, who presided at the annual meeting of the bank this year in place of the late Mr. Paton, openly deplored the falling off in advances and the consequent swelling of investments. He also, like Mr. Tuke, castigated the spirit of obstructiveness which was delaying full recovery. Being closely connected with the business activity of Lancashire, Martins Bank has strong reasons to deplore the ruin of the cotton export trade through the decline in international exchange. This decline Mr. Orme attributes to the cessation of international lending. He also lent support to Mr. Lloyd George's plea that a closer co-operation between Great Britain and America is perhaps the high road to recovery. Mr. Orme hopes that America may be induced to take the first step towards the restoration of international trade by lowering her tariffs sufficiently to admit to trading priviliges those whose pockets are empty of gold. Mr. Orme also vigourously opposed the suggestion that banks should be nationalised and that banks favoured large customers or paid unduly high dividends.

Imperial Tobacco Co.

The Imperial Tobacco Co. have published their statement of accounts for the year ended October 31, 1934. The accounts show an increase in profits of about £2,000,000 due largely to the cessation of coupon trading and to trade recovery generally. The total dividend is again 15 per cent., free of tax, with an increased bonus of $7\frac{1}{2}$ per cent. making the total $22\frac{1}{2}$ per cent. against 20 per cent. last year. The fear that higher prices of raw materials would affect sales was obviously unfounded. And even if the price of tobacco leaf increased slightly, the increase in sales more than offset the harm done. As a result of the publication of accounts "Imps" closed strongly in the Share market

Air Mail Week.

with a net gain of 1s. at 143s. A comparative statement of profit figures is given below:

The Shipping Conference.

The stage is set for another international conference and whether the labour of the delegates will be as fruitful as that of the World Economic Conference of painful memory remains to be seen. It has been recognised for some time that since nations are determined not to allow an expansion in international trade to absorb increasing and redundant tonnage a way should be found to reduce the tonnage to the existing level of demand. So far nations have nursed their own shipping interests with the grant of subsidies and other forms of protection and Great Britain also, in a small way, entered the lists. But it is daily becoming more evident that nations must either open the sluice gates of international trade or agree to conform to a reasonable and proportionate tonnage if the shipping industry is not to die. Great Britain, once at the van of the industry, has probably been one of the worst sufferers from the slump in shipping. At the end of 1934, 75 per cent. of the ship-building berths in Britain were still without tenants in spite of the fact that 137 berths had been dismantled under the N.S.S. Scheme. One cannot therefore be indifferent to the urgency of relief, especially as the carrying trade is perhaps the largest item in the list of invisible exports that help to swell Britain's favourable balance of trade. But international conferences have earned the unenviable reputation of being abortive. Will the Shipping Conference disprove such an allegation?

U. S. A.

SOCIAL SECURITY RLAN

The postponement of the Supreme Court award on the question of the gold clause has prolonged the period of uncertainty for American business on the whole. Wall Street necessarily suffers more on this account than the manufacturing concerns. America and the world at large are equally keen on knowing how exactly the Administration propose to meet the situation that might be created by the adverse decision of the Supreme Court. The press representatives, eager to satisfy the public interest and curiosity, have striven, might and main, to get some inkling of the Government's proposal in this regard. But so far to no purpose. The one thing, which can be stretched so as to have some significance in this conetext, is the report that Congress is likely to adopt legislation cancelling the tax exemption provision in the Government, State and Municipal bonds and that the plan has the support of the Treasury. The majority of American bonds contain a provision affording protection to the bond holders against any excessive tax levied over and above a certain level. It is an adaptation of the principle of issuing tax-free loans. This provision, legitimate as affording an extra inducement according to the necessities of the case, would now seem to stand in the way of the Government, if they should find it necessary to offset the effects of the adverse decision of the Supreme Court by proceeding to tax the extra profits which bond holders would make as a result of such a decision. The Government apparently are preparing to provide by statute for the abrogation of such a clause. And this, obviously, may be interpreted as a preparation for the unwelcome contingency of the Supreme Court refusing to recognise the action of the Administration in refusing to abide by the gold clause in American bonds. It will be seen that the reports in this regard are far from authentic; but barring such reports, there is hardly any clue to the attitude of the Administration or the preparations that they are making for the unwelcome eventuality.

In such circumstances it is idle to look for any great activity in the stock markets. But business pointers of a heartening nature are being received of late in somewhat rapid succession. It is sometime since the American public gave up looking for omens on the business horizon. For the feeling that the recovery programme had reached a critical stage, in the sense that further progress can be secured only by a new programme of action based on a thorough stock-taking, has spread to all classes; and hardly anyone expects to find changes either way till such a programme is announced.

There is as yet nothing in the nature of such a comprehensive plan based on a complete analysis of past results and the requirements of the situation created by nearly two years of the new policy. It might also be that the present situation does not require, to the same extent as it is generally supposed, an energetic drive in new directions on the part of the Government. It is quite possible that it is yet too early to look for solid results of the New Deal and much more so to try to appraise them. The essence of the policy is the expansion of consumptive demand through the initiation of vast schemes of public works expenditure. The underlying principle, obvious enough as an economic truth, has been generally overlooked in the economic policies that have taken their inspiration from the maxim of *laissez faire*. Mr. Roosevelt's claim to have effected a revolution in the national economy is his courageous insistence on following in active policy the implication of this truth. As a preliminary to the expansion of the national economy through the expansion of consumptive demand he had endeavoured to open some of the more glaring deadlocks in the relations between finance and industry on the one hand, and the industrial units on the other. The worst that can be said of the New Deal is that in opening out such deadlocks new ones have possibly been created. But it must be conceded that such new deadlocks will be automatically resolved by the pressure of new demand that will soon be created. Those, who insist that the Administration should effect an overhaul of the New deal, overlook this simple fact. It is not till the huge public works programme, which Mr. Roosevelt has now planned, is put largely into execution, that Mr. Roosevelt may be said to have had a chance at the helm of the national economy.

It is significant that what time the public is under this impression of a deadlock in the New Deal and indisposition to look for progress either way, encouraging business reports are coming in from all quarters. The very considerable expansion that has taken place in the sales of retail organisations all over the country is a matter well-known to the public. There is now the increase in the production of the heavy industries, particularly iron and steel. This is significant because the mood which we mentioned now was a direct result of the decline in the production of the steel industry which happened in the second and third quarter of 1934. The public can hardly be blamed for drawing such an inference from the setback in the steel industry. For this industry

Air Mail Week

was among the first to respond to the psychological atmosphere created by Mr. Roosevelt on his assumption of office ; and the decline in such an industry is also naturally interpreted as betokening a loss of confidence in the New Deal or the revelation of its inadequacy or unwisdom.

The fact would seem to be that the setback in the steel industry was due rather to the slower pace of progress among those industries which represent its direct consumers. So far at least as the end of 1934 was concerned, it is certain that the slow progress made by the steel industry was due to the fact that the motor car companies postponed the manufacture of their 1935 models to much later than usual. But now they have taken up actively the production of their new models, which is itself a sign that the stocks of unsold cars on their hands have thinned. The motor industry is one of the few in the world which keep adequate statistics of the changes in the market. Recently, one of the firms estimated that the replacement demand during the course of 1935 will be found to exceed that of any earlier year. Even on a very conservative computation of the lifetime of the motor car, the possible demand in the current year will warrant a substantial increase in production. General Motors have estimated that the production for 1935 will be well in excess of 1934. With these prospects in the motor car industry steel has more than sufficient reason to maintain a much higher level of productive activity than in the past. Already production in the steel industry has very nearly touched the high watermark of the post-New-Deal period. The other heavy industries are also bound to benefit from the initiation of the schemes of public works expenditure. There is thus ample reason to suggest that the reflective mood of the American public seen in the last few months is only a sign of its impatience and not of any radical defect in the New Deal.

Talking of public works expenditure, it might, perhaps, be mentioned here that the Senate has shown, of late, signs of impatience at giving the President such a wide discretion in regard to the appropriation of funds. Much as President Roosevelt dislikes the suggestion of dictorial powers, he does not believe in giving in to the Senate in this matter. For, he insists that it is humanly impossible to lay out in detail a plan for public works expenditure which the Administration can be called upon by statute to follow implicity. Changes will, doubtless, be necessary in the light of actual experience ; and it is only fair to the nation that those, who are in charge of the execution of this programme, should have the power to effect changes as and when necessary. So far as the House is concerned, it has agreed to the President's proposals ; and it is to be hoped that the Senate will find its way to giving Mr. Roosevelt the powers required for making a success of the scheme.

Special mention may be made in this review of Mr. Roosevelt's plan for "social scecurity," which has been embodied in Senator Wagner's bill and recommended to Congress by the President in his Social Security message. The President emphasised that his programme should be introduced gradually on the basis of experience and it should not be in danger of being discredited by attempts to apply it on too ambitious a scale at the start. He made a stirring appeal to Congress to pass legislation providing for unemployment compensation, old age benefits, federal aid to dependent children and additional federal relief for local and federal health agencies. The scheme, he claims, is equitable and inexpensive and could well remedy the effects of economic insecurity. The main points may be summarised as follows :—

(1) Compulsory unemployment insurance to be paid by employers through a payroll tax.

This would start at 1 per cent. on January 1, next, and would be increased to 3 per cent. by January 1, 1938, unless business picked up faster. In this case the 3 per cent. level would be reached sooner.

(2) Compulsory insurance against a poverty-stricken old age for wage earners with small salaries.

This would be paid by employers and employees on a fifty-fifty basis.

(3) Old-age pensions for the needy aged, who could not be covered by compulsory insurance. These would be paid for by the Federal and State Governments.

FRANCE

THE NEW DEAL AND THE BANK OF FRANCE

One of the objections raised against the new credit policy of the Fladin ministry is that misgivings might arise in the minds of a certain section of the populace as regards the stability of the franc. M. Moret, the ex-Chief of the Bank of France, is well-known for his staunch faith in deflation and gold standard and also in the existing exchange parities. His dismissal and the appointment of M. Tannery are interpreted by some as the first step towards the ultimate devaluation of the currency. Though, of course, this is not explicity mentioned by any one, this stands in the way of the release of hoards and the inauguration of the era of cheap money that Fladin has laid so much stress upon as the essential condition of recovery. M. Fladin has, therefore, to do some propaganda work in order to clear these misunderstandings and misinterpretations of his new deal. And in one of such speeches he has chosen to explain the position of the Bank of France as it will be, when the new policy functions satisfactorily.

The Government have now decided to finance the budget deficits by means of short-term financing. This is one of the features of the new policy. The needs of the Treasury are expected to be as great as before because of the heavy items of expenditure under national defence, public works, etc, Financing by means of short-term loans means co-operation of the Bank of France ; for unless the Bank of France increases its facilities for discounting and rediscounting, thus enabling holders of first class securities at short and medium form to get liquid cash at any moment, the cheapness of the short-term money cannot be maintained. This co-operation of the Bank of France is sought to be obtained by raising the amount of Treasury Bills, National Defence Bonds of short-date and certain other state-guaranteed or semi-public paper like the Railway notes, to the status of rediscountability, whenever money market or other conditions render aid to the private banks advisable.

A practical example will explain the situation. A cursory glance at the returns for any week of the Bank of France will show that the total assets of the Bank exceeds 100,000 million francs. The major portion, *i.e.*, about 80 per cent. of this amount is in the shape of gold bars, about 6 per cent., in bonds of the sinking fund, about 3 per cent. in permanent loan to the State, about 3 per cent. in advances against securities, about 3 to 4 per cent. in bills discounted or rediscounted. Under the heading "rediscounts and discounts" only a small fraction of the assets is operated. This portfolio can be further subdivided into minor divisions for the sake of analysis. These are commercial bills discounted on France, commercial bills discounted on abroad, negotiable bills brought on France, *i.e.*, bills brought from other central banks having accounts with the Bank of France, and lastly negotiable bills and other investments at short-term abroad. A close examina-

Air Mail Week

tion of the statement of affairs of any Bank will reveal that the proportion of these genuine commercial bills to the other securities, will be pitifully low. The bulk of the assets represented by bills, will, as a rule, be made up of Treasury Bills and National Defence Bonds. While this is the general feature, the Central Bank's share of investments in the total volume of commercial bills, will be still lower. Whereas before the war, it is calculated to have held from 40 per cent. to 60 per cent. of the total bill portfolio on the French banks, the present proportion is now probably about 20 per cent. Even this 20 per cent. represent good commercial paper which any of the banks of moderate standing would be glad to have.

This limited activity of the Central Bank in the commercial bills is more than made up by the institution of the *Caisse des depots et consignations*. As old as the Bank of France, the Caisse has concentrated on discounting short-term paper like National Defence Bonds, treasury bills, etc., besides that of lending on medium terms to finance public housing, electrification and other schemes. This has proved to be the chief manipulator of the market for the Rentes. It is now into this field of discounting and rediscounting that the Bank of France is to re-enter with more vigour. This will, therefore, explain the appointment of the Chief of Caisse as the Head of the Bank of France.

GERMANY

CREDIT CONTROL

Discussing the main features of the Banking System in Germany on a previous occasion in these columns, it was pointed out that one of the most important changes in banking should be in the direction of control of credit. The report of the Commission of Enquiry into Germany's Banking system published a few weeks back, also emphasized the fact that the defects of the credit system were not inherent in its structure or methods, but were due to the faulty economic and political leadership of the previous régime. In accordance with the recommendation of this Banking Commission, a new Banking Law has been promulgated, the main purport of which is the centralisation of all funds and the reorganisation of German capital and money markets with a view to financing the government's employment programme.

The new Law provides for the creation of a Bank Supervisory Office with wide powers The directorate is one of the most influential that could ever be thought of. Dr. Schacht, the Governor of the Reichsbank, will have the additional duty of presiding over and regulating the affairs of this Supervisory Office. The Secretaries of State of four interested Ministries of the Hitler Cabinet find place in the Board of Control. Dr. Earnst will soon be appointed, as a State Commissioner for the credit system. Thus it will be seen there is likely to be the completest co-operation between the Reichsbank and the State Supervisory Office in all matters, regulation by policy, etc.

The powers that the new control office will exercise will be wide and varied. All new credit institutions to be established in the country will have to obtain authorisation from the State Commissioner. Banks already functioning on January 1, 1935, are, however, exempt from obtaining this authorisation ; but the Commissioner is empowered to forbid them to transact business, should he think it necessary. Refusal of authorisation in the case of new institutions and withdrawal of sanctions in the case of old will entirely depend on whether the managers of the respective banks are "honourable," and whether they have sufficient professional training. It is not known what particular test has been laid down for gauging the "honesty" of the managers. But it appears fairly certain that many small banks will have to close down, particularly as the new legislation is intended to reorganise the entire banking system.

Elaborate steps are taken to maintain the soundness and liquidity of the institutes that are already doing banking functions. The Supervisory Office, towards the end, is authorised to limit total liabilities with individual banks (*i.e.*, deposits and acceptances after deducting liquid funds) to five times the share capital plus open reserves. Of course, it may not be possible to apply this proposition immediately in the case of the big banks ; but in course of time the Supervisory Office hope to bring about a uniformity in this respect. Another method, by which liquidity of the banks is sought to be maintained, is fixing the proportion that should exist between the cash in hand and credit balances with the Reichsbank ; and these, in turn, should bear a certain percentage to the total liabilities. This percentage is to be fixed by the Supervisory Office and to be gradually raised up to 10 per cent.

In addition a "second liquidity Reserve Fund" is sought to be created for every bank. This is to consist of three months' commercial bills, non-interest bearing Treasury certificates and Government loans admitted by the Reichsbank as collateral. This reserve fund is to be raised to 30 per cent. of the current liabilities in the industrial banks. It must be noted that the present proportion of this investment in securities etc. is about 35 per cent. of the total liabilities. In the case of the big five banks alone, about 8,000 million Rm. are maintained in the form of securities. If the cash percentage is to be maintained at 10, the banks will have to dispose of a part of the securities and realise liquid funds. In the case of the five big banks, about Rm. 400 millions have to be sold out. The loss in interest by this process cannot be overlooked, though the Supervisory Board maintain that such petty losses have to be endured in the wider national interests. The loss of interest in the case of the big five, is estimated to be about Rm. 16,000,000 annually which works out to about 4 per cent. of the share capital.

Particularly stringent are the regulations regarding issue of credit. To avoid accumulations of credits or ill-advised investments with one another, the Supervisory Office has stipulated that a certain percentage has to be maintained between such loans and the share capital plus Reserve funds. Credits in excess of Rm. 1,000,000 are to be notified to the State Commissioners. The Central Office will record all credits in excess of one million Reichsmarks and a close watch will be kept over the realisation of such credits. Such credits could be granted by banks only with the joint approval of all the managers. For Credits granted to managers, directors or to any officials or employees of the banks, the unanimous consent of all managers and members of the board is required. To increase the responsibility of managers they are made liable for paying compensation if credits are allowed in contravention to what the legislation provides for.

From the standpoint of financing minor trades and industries, the provision of cheap money is ensured by a prohibition in the bank transfers except through the Reichsbank. The whole of Germany will be divided into a certain number of districts and transference of money will be permitted only within the banks of that district. For banks outside the districts, transference of funds will have to be effected through the Reichsbank.

JUTE AND JUTE GOODS

JUTE

Calcutta, February 7.

The loose jute market was steady over the week-end with increased enquiries from mills. No business however materialised. Indian Jat XLR's were quoted from Rs. 5 to Rs. 5-2-0 according to Marks.

The Pucca Bales section remained more or less idle. Buyers showed no interest on sellers' offers of Firsts and Lightnings for ready shipments at Rs. 31-4-0 and Rs. 26-4-0 respectively.

Imports and exports on February 4 were 10,000 maunds and 5,000 maunds respectively and stocks were estimated at 7,39,000 maunds compared with 1,002,000 maunds on the same date last year.

East India Jute Association's report dated February 5, quotes :—

JUTE MANUFACTURES

Calcutta, February 7.

A firm raw jute market induced a steady tone in the Hessian section without much actual turn-over. 11 porters February-March at Rs. 12-2 and July-September at Rs. 12-3-6 were done : also March 7½ oz. at Rs. 9-4-0 basis.

Heavy goods attracted some interest and B. Twills February-March were sold at Rs. 29-4 and February Liverpool Twills at Rs. 29-4. There was a strong tendency on the part of sellers to resist lower prices.

Memo. of total reported production of manufactured goods by the mills in the membership of the Association *and also* by the Adamjee, Agarpara, Gagalbhai and Shree Hanuman Mills, for the month of January, 135 :

COTTON AND COTTON GOODS

COTTON.

Calcutta, February 7.

The local market was featureless and reports from Bombay state that the market there did not respond to the steadiness of the Liverpool market. Trading in Broach cotton for April-May contract began at Rs. 248, declining rapidly to Rs. 246-4-0 owing to liquidation by weak bulls and selling by holders of options. Later heavy selling by Ahmedabad and Japanese interests caused nervousness which further contracted the price for May delivery Broach to Rs. 245-4.

New York reports state that a pessimistic attitude prevails towards the probability of an adverse gold decision. It is believed that Wall Street and other principal markets think they can get away from the Supreme Court's announcement.

The New York Cotton Exchange was colourless, except for a feeling that the present precarious situation indicates a decided diminution in selling pressure.

The following comparative estimate of world cotton production has been issued by the New York Cotton Exchange Service :—

Season	Bales
1934-35	22,591,000
1933-34	25,327,000
1932-33	23,585,000
1931-32	26,535,000
1930-31	25,190,000

The same authority states that the world consumption of all kinds of cotton during November 1934 amounted to 2,133,000 bales compared with 2,198,000 bales in October 1934 and 2,150,000 bales in November 1933. World consumption, other than American cotton, during November 1934 is estimated at 1,126,000 bales compared with 1,119,000 bales during October 1934 and 953,000 bales in November 1933.

The exports from all parts of India, to Lancashire, from January 1, 1934 to December 31, 1934, amounted to 374,925 bales.

The imports into the United Kingdom for 1931-32 (August to July is the period of calculation) amounted to 137,315 bales. During 1932-33, the imports amounted to 229,749 bales; and in 1933-34, the imports amounted to 361,546 bales.

Considerable confusion is reported to have taken place in Lancashire cotton trade with regard to the raw cotton situation in the United States. The Department of Agriculture has announced that the tax free quota for the cotton crop next season under Bankhead Act would be 10,500,000 bales. It is understood that this amount is in bales of 500 lb. each, and means an actual yield of about 11,470,000 running bales.

It must also be remembered that some farms are outside the scope of the Bankhead Act, and their production will be about 700,000 bales, so there is a possibility of the crop being over 12,000,000 bales.

The American Government has made loans to farmers against their cotton, on the basis of 12 cents per pound, with the result that the Government has now under its control about 7,000,000 bales.

This policy has had a vital effect upon the export trade of America, as, so far this season, only 2,687,000 bales have been exported, against 4,522,000 bales in the same time last year.

Among spinners, the present price of cotton is considered artificial and everything possible is being done to use other qualities, and especially Brazilian.

It is believed that if users refuse to buy American, the American Government will ultimately have to alter its policy.

COTTON PIECEGOODS

A slightly firmer tone was manifest in the local piecegoods market with up-country consuming centres more active, Japanese bleached, dyed and printed styles having been most in demand, with Lancashire standard lines making a good second. Indian mills products were neglected.

Ruling rates show that British goods have ruled more or less steady in face of better imports, whilst some important Japanese styles have experienced a shrinkage in prices.

There was the enhanced total import of 9,73,12,000 yards in all styles, during October to December last against 8,64,58,000 yards during the quarter ending September last. The increase has been largely due to improved quantities in bleached, dyed and printed goods, the totals being 1,31,76,000, 1,12,56,000 and 2,55,04,000 respectively for the last quarter of 1934, against the respective totals of 87,09,400, 1,00,26,000 and 1,75,74,000 yards for July to September.

These increased totals are partially due to larger Japanese exports particularly in white and printed goods, the total shipments being 4,54,69,000 and 1,45,11,000 yards respectively during the months of October to December whilst the import figures during the previous quarter were 2,897,900, and 1,28,20,402 yards respectively.

Prices in the Japanese styles have declined of late possibly due to large shipments in December and goods being in weaker hands. The 26″ × 40 yards shirting prints have come down to Rs. 5-14-0 a piece, and No. 800 white shirtings have fetched about Rs. 11-3-0 a piece.

Whilst this is the situation it may be stated that in bleached, dyed and printed goods Great Britain has also increased her exports, but with no corresponding decline of note in rates. In these goods the country has been responsible for 5,921,900, 8,362,800, and 6,989,300 yards during the third quarter of 1934 against 6,747,000, 9,986,500 and 10,953,500 yards for the last quarter ending December.

BULLION

GOLD

Calcutta, February 7.

Gold price level was quiet after a temporary sagging brought about by unconfirmed rumours. At the week-end trading in Bombay began at Rs. 35-0-3, but business was restricted and confirmed to local traders. Ready March and April settlement were quoted at Rs. 34-15 and Rs. 35-0-9 respectively. Double Option for March and April stood at As. 6 and As. 10.

LONDON—Air Mail Week.

The Bank of England gold reserve against notes amounted to £192,403,692 on the 16th instant, as compared with £192,302,099 on the previous Wednesday.

Bar gold to the value of £2,200,000 was disposed of in the open market during the week.

The United States Supreme Court has adjourned until February 4th and its decision with regard to the gold clause is postponed accordingly; consequently very large gold shipments have been made to New York calculated to reach there before the date mentioned, but there is still nervousness as regards making arrangements further ahead.

The amount of gold shipped from London to New York since our last letter is estimated to be at least £11,000,000.

SILVER.

Calcutta, February 7.

Reports from Bombay show that the market maintained a fairly steady tone, with a temporary lapse. World market conditions finally induced a lower level in Bombay which attracted some covering.

On steady Shanghai close, prices went on improving to Rs. 62-7. Rates at 5-30 p.m. for Ready March and April were quoted at Rs. 62-2, Rs. 62-7 and Rs. 66-7, respectively. Double option for March and April stands at Rs. 1-10 and Rs. 2-8 respectively.

Indian selling was responsible for a fall in London Prices which were down 1s. 8d. per oz. New York silver was also adversely affected. A very weak tone is reported on the Montreal Exchange. The response from Shanghai which opened easy at the beginning of the month was poor.

London Air Mail week:

The market continued to show a very steady tone and during the past week, prices showed a variation of only 1/16d. Further resales have been made by the Indian Bazaars and speculators, but America has been a good buyer at current rates and with some China speculative demand, offerings were well absorbed.

There is no indication of any important change at present, but the undertone is still firm.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 14th instant to mid-day on the 21st instant:—

TEA

Calcutta, February 7.

Calcutta tea sales dated February 5 comprised for local consumption about 7,000 packages of Broken and Leaf grades and 8,400 pounds of Dust.

The former came to a good demand and prices ruleed strong. Dusts however were inclined to be irreular and slightly weaker, with the exception of small powdery kinds which were fully firm.

The following are full particulars of Sale No. 32.

Tea with Export Rights.	1935	1934
Offered	17,015	10,519
Sold	12,796	9,891
Average	0-7-8	0-11-2

SUGAR

Calcutta, February 7.

Prices advanced on news of the raising or limits by Java mills and the broader interest shown in sugar generally. A bullish sentiment prevailed and importers did a fair amount of advance booking. Indian mills also came into the market to cover forward commitments; but the failure of a European grain House, with interests in London and India, eliminated this feature. Outsiders with heavy cheap holdings were out to secure profits and in Bombay effected sales on a decline in prices of 2 to 3 annas.

Latest limits by Java Mills stand at F. 3.50 against F. 3.35 of a week ago. Importers' selling parities indicate Rs. 4-1-6 for July-September against the local Bazaar rate of Rs. 3-13 at the close. The price for March-April shipment Javas rulling at Rs. 3-12-6 equals Rs. 13-7 ex-godown while Indian crystals No. 1 at Rs. 8-9 to Rs. 8-10 would be Rs. 13-12-6. The general belief is that the week's recessions have come by way of reaction, and that Java sugars will occupy an important necessity for the months June-December.

According to the final memorandum on the sugarcane crop in the Bombay Presidency the total reported and estimated area under this crop now stands as under (for Bombay Presidency proper) :—

British districts, 72,000 acres; Indian States, 37,000 acres; total 109,000 acres.

So far as the British districts are concerned, the area shows an increase of 3.5 and 12.1 per cent. respectively over the finally revised area of the last year and the average actual area during the preceding ten years.

The total estimated yield of "gur works out, (for Bombay Presidency proper) at :

British districts, 179,000 tons.

So far as the British districts are concerned this yield means a decrease of 7.8 and 1.7 per cent. respectively, below the estimated outturn of the actual area of last year.

MISCELLANEOUS

WHEAT

Calcutta, February 7.

The Department of Agriculture, Bengal has issued the following particulars about the wheat crop of Bengal for 1934-35.

According to the estimates of the District Officers, the total area sown amounts 151,600 acres this year as against 145,400 and 145,500 acres, respectively, in the corresponding and final forecasts of last year.

Rainfall in October and November was sufficient for the preparatory tillage and for the sowings of the crop which generally took place at the usual time. Subsequent weather was helpful for germination and growth. The present outlook is promising, on the whole.

On an average of the five years ending 1932-33, the area under wheat in Bengal has represented some 0.4 per cent. of the total area under wheat in India. The ratio of the irrigated wheat acreage to total wheat acreage in British India and in the territory now reported on has, in the five years ending 1932-33, averaged 41.4 and 10.8 per cent., respectively.

Week-end reports from Karachi state that a bearish feeling prevailed on our market last week, and prices gradually declined to the extent of 12 to 14 annas for the old crop, and rupees two per candy for the new crop. The weakness was caused by the sharp fall in Punjab values, following the widespread rainfalls throughout the Northern India. Although a bit late, these rains are said to have helped the crop considerably in making up the loss sustained during the recent frosts.

Trading during the week was on a small scale, and consisted mostly of speculative liquidation. Spot sales totalled about 15,000 bags which were brought by local mills. Arrivals from upcountry were on average 3,000 bags per day, of the week's exports totalled 4,700 bags, of which 2,135 bags were for Bombay and 2,565 bags for Calcutta. Local stock stands reduced to about 1½ lakhs of bags.

The Punjab markets during the week ruled very weak to the extent of 4½ to 5 annas per maund on account of the beneficial rains and improved crop prospects. The official provincial reports issued so far place the area sown this year in the Punjab at 13 per cent. below last year, and in the N. W. F. P. at 5 per cent. below last year. In Sind, the acreage is estimated at 11½ lakhs which is 10 per cent. less than last year when the area sown was 12,60,000 acres. The decrease is aftributed to the deficient rainfall, but the condition of the crop is reported as satisfactory and free of any pest or disease.

opposition? (*c*) a poor *pundit* or a rich ignoramus?

21. If you had to choose between the following titles which would you choose:—
   (*a*) Rai Bahadur or C. I. E.; Kaiser-i-Hind medal or M. B. E.?
   (*b*) Does your heart throb when you read the Honours' List?
   (*c*) Which would you prefer—nomination to the legislature or an alphabetical suffix to your name?

22. (i) If you had the choice which would you rather be (*a*) Hitler, (*b*) Mussolini, (*c*) Stalin, (*d*) Mustapha Kemal Pasha, (*e*) Roosevelt, (*f*) Shah of Persia, (*g*) Oswald Mosley.
   (ii) If you were a Dictator in India which would you abolish first (i) untouchability? (ii) child marriage? (iii) income-tax surcharge? (iv) your opponents?
   (iii) Which persons would you like to shoot and exile immediately on your becoming a Dictator? (Answers will be kept very private).

23. Which of the following is your motto in (*a*) public life, (*b*) business:
   Safety First or Nothing Venture Nothing Have?

24. (*a*) Do you prefer to issue statements or give interviews? Which provides better grounds for subsequent retreat and contradiction?

25. (i) If you had to write to the papers, would you write under your own name or anonymously?
   (ii) If anonymously, which would you prefer of the following:—
      (a) Pro-Bono Publico, (b) One Who Knows, (*c*) Your initials?
   (iii) Do you think your letters are read by anybody except (*a*) the unfortunate editor, (*b*) the over-worked proof-reader, (*c*) the under-paid printer, (*d*) yourself?

26. (i) What is a psychological moment?

27. (*a*) Did you attend any of the 46 Conferences held all over India during the last Xmas week?
   (*b*) Were your "qualities of head and heart" praised anywhere?

28. Are you able to
   (*a*) explore an avenue?
   (*b*) bridge a gulf?
   (*c*) present a united front?
   (*d*) rise to the occasion?
   (*e*) make a gesture?
   (*f*) deliver the goods?

STATISTICAL INFORMATION

RAILWAY TRAFFIC

LATEST EARNINGS AND WORKING EXPENSES

The total approximate gross earnings of all State-owned Railways for the week ending 19th January, 1935 (42nd week), amount to Rs. 181 lakhs, Rs. 1 lakh LESS than the figures for the preceding week and Rs. 11 lakhs MORE than the actuals for the corresponding week of the previous year and Rs. 7 lakhs MORE than the actuals for the corresponding week of 1932-33.

The total approximate gross earnings from 1st April, 1934, to 19th January, 1935, amount to Rs. 70.20 crores or Rs. 297 lakhs MORE than the actuals for the corresponding period of the previous year and Rs. 444 lakhs MORE than the actuals for the corresponding period of 1932-33.

The following are the up-to-date approximate gross earnings and working expenses of the State-owned Railways from 1st April, 1934, as compared with the actuals of the corresponding period of last year:—

Railways.	Earnings. Rs. Up to 19-1-34. (in lakhs)	Earnings. Rs. Up to 19-1-35. (in lakhs)	Working Expenses* Rs. Up to 31-12-33. (in lakhs)	Working Expenses* Rs. Up to 31-12-34. (in lakhs)

* Including suspense but excluding appropriation to and from Depreciation Fund.

A comparison with the figures of the previous week for the principal State-owned Railways shows Decreases in the approximate gross earnings of all railways except the A. B., B. B. & C. I., Burma, E. B., G. I. P. and Tirhoot & Lucknow-Bareilly. A comparison with the actuals of the corresponding week of 1934 shows Increases in the approximate gross earnings of all the principal State-owned Railways except the G. I. P. and M. & S. M.

RICE CROP IN BURMA

FOURTH ESTIMATE

About 12,370,000 acres of land under rice cultivation, representing a decrease of 91,800 acres in the actual area matured last year, is forecast in the fourth provincial estimate of the rice crop in Burma for 1934-35.

Last year the actual acreage under cultivation fell short of the estimated acreage by 71,100 acres.

The estimated crop for this year is figured out at 7,181,000 tons of paddy as against 7,850,000 tons estimated at this time last year. The exportable surplus for 1934-35 is estimated at 4,527,000 tons, which may be taken as equivalent to 3,350,000 tons of rice and rice products.

The distribution of exports by port is Akyab 260,000 tons, Bessein 350,000 tons, Moulmein 230,000 tons, and Rangoon and minor ports, 2,510,000 tons.

IRON & STEEL OUTPUT

Messrs. Tata Sons, Limited, Agents for the Tata Iron and Steel Company, Limited, report that the total approximate production of iron and steel at the Steel Works at Jamshedpur during the month of January 1935, was:—

	Tons.
Pig Iron	83,700
Finished Steel	48,000
Finished steel	48,000

RAW COTTON STATISTICS.

The Director of Agriculture, Madras reports that the receipts of loose cotton at presses and spinning mills in the Madras Presidency from February 1, 1934, to January 31, 1935, amounted to 597,224 bales of 400 lb. lint as against an estimate of 451.690 bales of the total crop of 1933-34. The receipts in the corresponding period of the previous year were 470,354 bales. 320,217 bales mainly of pressed cotton were received at spinning mills and 240,842 bales were exported by sea while 46,223 bales were imported by sea mainly from Karachi and Bombay.

IMPORTS OF TEXTILES INTO BOMBAY

The figures of imports of cotton yarn and piecegoods into Bombay for the month of November reveal a slight increase in the imports of cotton yarn, but a substantial decline in the takings of piecegoods. There was a marked falling off in the importations of printed, dyed and bleached piecegoods during the month.

Imports of cotton yarn of all descriptions amounted to 1.2 million lbs. as compared with 1.1 million lbs. in October. There was a falling off in the share held by the United Kingdom which dropped by 35,000 lbs. to 185,000 lbs.; imports from China at 376,000 lbs. were also slightly lower; but Japan increased her sendings from 471,000 lbs. in October to 639,000 lbs. during the month.

The total importations of cotton piecegoods into Bombay, including fents, amounted to 28.3 million yards during the month as compared with 32.4 million yards in October. The takings of printed goods fell away by 2 million yards to 8.3 million yards, and of bleached and dyed goods by a million yards each to 3.9 and 3.6 million yards respectively. Of the goods imported during the month, the United Kingdom sent 10.3 million yards as compared with 13.2 million yards in October, and Japan 16.4 million yards as against 17.7 million yards in the previous month.

There was a marked falling off in the importations of cotton piecegoods into India during the month of November as compared with the figure for the previous month, but the imports of cotton yarn were maintained at the same level. The imports of piecegoods were, however, substantially higher than in November last year.

IMPORTS OF YARN INTO BOMBAY

Imports of cotton yarn of all descriptions amounted to 2.4 million lbs. as compared with 2½ million lbs. in October. The share of the United Kingdom dropped from 1.1 million lbs. in October to 770,000 lbs. during the month, but Japan increased her sendings, mostly of mercerised yarn, by nearly 150,000 lbs. to 922,000 lbs. Imports from China at 691,000 lbs. were 70,000 lbs. higher.

It is interesting to note that the imports of grey folded yarn rose by nearly 200,000 lbs. to 556,000 lbs. owing to increased imports of counts 26-50s. from China—293,000 lbs. as compared with 105,000 lbs. in October. In the case of mercerised yarn, Japan increased her sendings of counts 51-80s. (folded yarn) by 140,000 lbs. to 581,000 lbs.

The imports of cotton piecegoods during the month amounted to 79½ million yards as compared with 93.8 million yards in October. This reduction in imports was accounted for by reduced takings of almost all classes of goods, the drop in the case of bordered grey goods being the heaviest. As regards the principal countries of import, the sendings of the United Kingdom dropped by nearly 10 million yards to 44.8 million yards, while those of Japan at 33.2 million yards registered a drop of 4½ million yards.

RAILWAY EARNINGS

The approximate traffic returns of the G. I. P. Railway during the week ending January 26 amounted to Rs. 28,01,500, a decrease of Rs. 76,690 compared with the corresponding week last year. The total earnings from April 1, last, January 26, amounting to Rs. 9,96,46,041, represent a decrease of Rs. 2,44,480 compared with the corresponding period last year.

The approximate traffic returns of the B. B. and C. I. Railway during the week ending January 19 amounted to Rs. 25,74,000, an increase of Rs. 3,25,000 compared with the corresponding week last year. The total earnings from April 1, last, January 19, amounting to Rs. 8,55,47,000, recresent an increase of Rs. 39,53,000 compared with the corresponding period last year.

Vol. XV. No. 6 SATURDAY, FEBRUARY 9, 1935 Price Re. 1

THE WEEK IN THE EXCHANGES

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Thursday Noon.,

Calcutta, February, 8.

Generally speaking, there has been more activity in the Exchange during this week than during the last. For one thing, Government Securities, which were sagging ominously last week, recovered from the set-back, though they have not been able to retain all the gains. Jute Mill shares have firmed up again, due to better commodity markets ; and prices in certain cases registered further advances. Coals had a broadening of buying enquiry, which was naturally restricted to the better classes. Cottons and Teas continued dull. Among Miscellaneous, Sugars were in fair demand. Electrics and Engineering remained steady without much change in rates, and Paper Mill shares were steadier.

Government Securities.—Apparently, the heavy sales of last week having been mostly absorbed until Friday last, the market assumed a steady tone from early in the week. From the closing quotation of Rs. 97-10, 3½ per cent. Paper improved to Rs. 97-14 on Saturday and firmed up further to Rs. 98-2 by Monday. The buoyant sentiment was so strong as to take up Paper to the level of Rs. 98-8. But under the pressure of tight money, Giltedge has again given way ; and the closing is no better than Rs. 98 after touching lower levels. 5 per cent. 45-55 loans are quoted at Rs. 117-6 and 5½ per cent. loan 1938-40 at Rs. 108-10.

The volume of business was on a poor scale, but the undertone is steady.

Debentures.—The only business reported was in 6 per cent. Associated Hotel Debentures at round Rs. 104-12. Buyers for any good issue continue in abundance, but there is none on offer.

Preferences.—A good business has been passing in Jute Mills Preferences with rates mostly in sellers' favour. Hukumchands have improved from Rs. 116-8 to Rs. 118 ; Ballys from Rs. 141 to Rs. 144. And there are good many buyers for various issues at about 2 points over last prevailing rates.

Associated Hotel Preferences were reported at Rs. 102 and B. I. Corporation Preference at Rs. 157.

Banks and Railways.—Bank shares were unchanged. Imperial fully paids were transacted at Rs. 1,575 and Contributories at Rs. 396. Central Banks had dealings round Rs. 38-8.

There is nothing fresh to report in Railway shares.

Cottons.—This section continued dull and inactive with rates mostly in buyers' favour. Dunbars are quoted at Rs. 132, Kesoram (Ordy.) at Rs. 4-15 ; New Victoria (Ordy.) at Rs. 1-10 and Pref. round Rs. 5-12.

Coal.—In spite of the unfavourable news of the Government's decision regarding Coal Restriction Scheme, which caused a sharp decline in this section last week, it appears that the public are now placing more confidence on the improvement of the trade demand and expected reduction of the freight surcharge. Though the decision of the government is widely regretted, it is now recognised that the competition which must ensue gives valuable opportunities to the companies which are better placed financially and otherwise. Consequently, there has been a discriminate demand for selected issues. Bengal improved form Rs. 280 to 295 ; New Manbhoom from Rs. 65 to Rs. 70 ; Equitable from Rs. 37-8 to Rs. 39-8 ; New Beerbhum from Rs. 15-4 to Rs. 16-6 and West Jamuria from Rs. 10-12 to Rs. 12-4. Among other issues, a few are slightly better in sympathy with the issues mentioned above. Other scrips are unchanged.

Jutes.—This section ruled firm during this week. Prices recovered and in certain instances advanced further on support. The best features have been Fort William, which appreciated from Rs. 400 to Rs. 420 ; Naihati from Rs. 550 to Rs. 565 ; Lansdowne from Rs. 225 to Rs. 240 ; Delta from Rs. 460 to Rs. 475, Caledonian from Rs. 580 to Rs. 600.

The commodity markets were generally falling away during last week, but since Monday morning, a better tone has prevailed all round. The Main reason for this improvement appears to be the general feeling of confidence in the Government's voluntary scheme of restricted sowings, as reports from various districts by various sources reveal that the scheme is working satisfactorily. Such news caused the speculators to take a favourable view of the future ; and their buying acitvities have instantly checked the decline. Raw jute future after touching Rs. 32-12 is now better at Rs. 33-8, while Hessians futures appreciated from Rs. 9-5 to Rs. 9-8-6.

Outside demand for Hessians is rather poor, but in spite of that prices are keeping fairly steady. Bazar operators hold a bullish view ; and with a little improvement in demand, values are likely to register further advances.

Turning to Jute shares, the market is decidedly in an overbought position, but with prospects as they are dealers and professional operators are not inclined to part with their holdings and prefer to await developments. It is also thought that under the present circumstances, the mills will possibly be in a position to distribute better dividends in future. The market closes with a firm undertone.

Howrahs fluctuated between Rs. 66-4 and Rs. 66, closing today at Rs. 65-10 while Kamarhattys were dealt around Rs. 678.

Looking to the recent reports, Adamjee and Agarpara appear to be attractive with chance of capital appreciation and satisfactory return.

Teas.—There is nothing fresh to report in this section. Hathikhiras changed hands between Rs. 28-8 and Rs. 29, but generally tea shares remain neglected.

Sugars.—These ruled fairly steady with Balarampores at Rs. 19-12 ; Cawnpores at Rs. 38 ; Samastipores at Rs. 11-8. Rohtas were in good demand up to

Rs. 10-2, while Basti and Punjabs improved to Rs. 250 and Rs. 312 respectively.

Rubbers.—There is little change to record either in prices or activity. Prospects, however, continue to be bright.

Engineering.—Engineering shares showed no change. Indian Irons were dealt around Rs. 8-4 and Bengal Iron at Rs. 4-10.

Electrics.—This section has been steady during the week and there has been no change in prices. Bengal Telephones were done at Rs. 19 ; U. P. Electrics at Rs. 162 ; but Rawalpindis were a shade easier at Rs. 23. There are sellers for Muttra at Rs. 11 and Benares Electrics at Rs. 15-4.

Miscellaneous.—Paper Mills were in slightly improved demand. Bengal Paper had found buyers at Rs. 106 while India Paper and Titaghur were firm, quoting Rs. 186 and Rs. 21-8 respectively. Burma Corporations are easier at Rs. 6-3 and Tavoy Tins at Rs. 4-4. British India Corporation were transacted at round Rs. 2-14 and Ivan Jones at Rs. 2-8. Midnapore Zemindary have slightly declined to Rs. 77 but with a better price for raw jute, they have speculative possibilities.

BOMBAY STOCK EXCHANGE.

(*By Wire*)

(From Our Correspondent)

Bombay, February 6.

Money Market.—Money was firm with intercall quoting at $3\frac{1}{4}$ per ent.

Exchange.—Though quiet in the beginning of the week, the market closed steady with Banks selling T. T. at 1s. $6\frac{1}{8}$d. for February ; 1s. 6 3/32d. for March ; 1s. 6 1/16d. for April ; 1s. 6 3/64d. for May and 1s. 6 1/32d. for June-July-August. Banks are buying 3 months bills at 1s. 6 7/32d.

Securities Market.—Rupee Securities market firmed up on rumours of expansion of currency though closed slightly easy. $3\frac{1}{2}$ per cent. Paper which was around Rs. 97-8 during last week, firmed up as high as Rs. 98-9 though closed at Rs. 98-1. 1941 closed at Rs. 101-2 ; 47-50 at Rs. 102-2 ; 1943 at Rs. 106-1 ; 60-70 at Rs. 110-5 ; 55-60 at Rs. 117-4 ; 1935 at Rs. 101-4 ; 39-44 at Rs. 107-12 ; 40-43 at Rs. 109-2 ; 38-40 at Rs. 108-8 ; 45-55 at Rs. 117-9 ; Bombay Development at Rs. 102-6.

Shares.—All sections have moved up with the remarkable rise in Steels.

Textiles.—All leading scrips have improved considerably though closed lower than the highest touched during this week. There was a good deal of activity in Dyeings, Central Indias and Kohinoors. Central Indias were done as high as Rs. 413-2 though closed at Rs. 406-4 and are talked of reaching higher levels. Bombay Dyeings after reaching Rs. 1,001-4 closed at Rs. 988-12 ; Gokaks were steady at Rs. 237-8 ; Kohinoors better at Rs. 238-12 ; Century closed at Rs. 331-4 ; Colaba at Rs. 170 ; New Great at Rs. 222-8; Simplex at Rs. 106-4 ; Swadeshi at Rs. 265.

Hydro Electrics.—Powers have risen by 70 points and were steady around Rs. 641-4. Andhras after firming upto Rs. 1,840 losed on selling, at Rs. 1,806-4 while Hydros were steady at Rs. 183-2.

Iron and Steel.—Steels have had a remarkable rise though closed slightly lower than yesterday's quotations. Ordinaries were done as high as Rs. 155 though closed at Rs. 151 and Deferreds which were quoted at Rs. 747-8 closed at Rs. 718-12. Second Preferences were better at Rs. 172-4.

Cements.—This section ruled steady with Bundis closing at Rs. 39-14 ; Gwalior at Rs. 127-8 ; Indian at Rs. 415 ; Katni Deferreds at Rs. 1,327-8 ; Ordinary at Rs. 393-12 ; Okha at Rs. 211-4 ; Punjab Ordinary at Rs. 27-6 ; Shahabad at Rs. 386-14 ; United at Rs. 80.

Miscellaneous.—Bombay Burmas reached Rs. 420 but closed at Rs. 412-8 and New Shares at Rs. 127-8. Belapur Sugars were easy at Rs. 287-8 ; Trams were better at Rs. 173-12 with chances of further appreciation ; Petrols steady at Rs. 4-1 ; Constructions better at Rs. 89 ; Radio Deferred and Ordinary were steady at Rs. 585 and Rs. 517-8 respectively ; Telephones at Rs. 118.

Banks and Insurance.—Barodas closed at Rs. 107-12 ; Centrals at Rs. 39-8 ; Imperial Fully Paid at Rs. 1,587-8 ; Partly Paids at Rs. 398-12 ; Bank of India at Rs. 121 and Union at Rs. 5-12.

New Indias were better at Rs. 47-8 ; Orientals were steady at Rs. 4,600 and Vulcans at Rs. 7-13.

MADRAS STOCK EXCHANGE

(*By Wire*)

(From Our Correspondent)

Madras, February 6.

The Securities market was active owing to considerable buying power being developed by Calcutta operators, tight conditions having ceased perceptibly. There have been more buyers for 4 per cent. 1960-70 loan at Rs. 110-5 with little offering, whilst a good turnover was noted in 5 per cent. 1945-55 loan around Rs. 117-8. The enquiry for short and medium dated loans continued poor with business restricted. Mysore Loans advanced but at the close had good sellers.

The demand for fixed interest securities was moderate with some deals in Cochin Malabars Debentures at Rs. 104 and Premier Hosiery Preferences at 12 annas Premium.

Banks.—Bank shares were dull with the exception of Indian Banks and Indo-Commercial Banks. The former have buyers at Rs. 135 and the latter at Rs. 112 ex-dividend. The Report and Accounts of the Indo-Commercial Bank Limited for the year ended 1934 make good reading. The Directors and the management should be congratulated on the excellent results achieved. A dividend at the rate of $7\frac{1}{2}$ per cent. per annum free of tax for the half-year has been recommended, with substantial sums carried to the Reserve Funds. A new issue of shares is apparently under contemplation. This would give an opportunity to the several investors who are on the look out for good bank shares giving a reasonable yield with prospects of capital appreciation.

State-aided Bank of Travancore weakened to Rs. 15.

Public Utilities.—Electrics were in good demand with several deals reported in Trichy-Srirangams at Rs. 200 ; and Rs. 20 for the big and small shares and Rs. 13 for Vellore Electrics ; and 8 annas premium for West Coast Electrics.

Mills.—Mills were firm. Buckingham and Carnatic Ordinaries were done at Rs. 215 whilst Cambodia Mills were taken up at Rs. 13-8 ; Gokaks were a bright feature rising to Rs. 238. Premier Hosiery met with buyers at par whist Vasantas continued scarce.

Cements.—Cement shares strengthened perceptibly with Punjab and Shahabad being the main features. Punjab closed at Rs. 28.

Sugars.—This section was dull and excepting for isolated deals in Belapurs at Rs. 297 and Buland Sugars at Rs. 3-8 premium, there were no deals of note.

Planting.—Rubber shares were neglected, Teas came in for better attention especially with Peria-Karamalais and Vellamalais and large lots of the former changed hands at Rs. 39 with buyers over whilst Vellamalais were bid up to Rs. 10 without inducing sellers.

Miscellaneous.—In this section, Tata Steel Ordinaries and Deferred monopolised the attention and the former rose to Rs. 155 and Deferreds to Rs. 735, closing quieter.

Worth-While Investments:
INDIA:

WELL-ENTRENCHED COTTON MILL

ATTRACTIVE EQUITY SHARES

By "Watch—Dog"

The balance sheet for 1934 of the Muir Mills Company Limited (Cawnpore) has been issued this week and serves as a reminder that one of the soundest investments in equity shares is furnished by the ordinary shares of this well-managed and well-entrenched Company.

From every point of view, the position is most favourable. The capital plan consists of Rs. 15 lakhs of 6 per cent. Preference Shares of Rs. 50 each and Rs. 15 lakhs of Ordinary Shares of Rs. 50 each. The reserves amount to Rs. 40 lakhs, being made up as follows:—

For replacement of machinery ...	Rs.	7,00,000
New extensions ...	,,	15,00,000
Equalisation of dividends ...	,,	15,00,000
General Reserve ...	,,	3,00,000

Buildings and machinery whose gross value is Rs. 86½ lakhs have been depreciated to Rs. 32 lakhs. It will thus be seen that the book value of the property is just about equal to the paid-up capital.

It is also to be added that for a mill which consists of 85,484 spindles and 1,578 looms kept in tip-top condition, the book value of Rs. 32 lakhs is an extremely conservative valuation.

The Company has been providing for depreciation of machinery, as well as for replacement of machinery and for new extensions. The amounts set apart for replacement of machinery and for new extensions are more or less intact as the depreciation provision has been obviously adequate for keeping the plant in trim. Against a total reserve of Rs. 40 lakhs shown on the liabilities side, investments and cash on the assets side stand at nearly Rs. 45 lakhs.

Sundry liabilities like deposits etc., are set off by stocks, book debts etc.

The balance sheet position is thus exrtaordinarily strong, both as regards the book value of the assets and the considerable surplus liquid assets.

When we turn to the profit and loss statement, the story disclosed is equally gratifying. The 1934 profit, after providing for all charges including taxation, comes to Rs. 8 lakhs. To this are to be added the carry-forward of Re. 1 lakh from the previous year and Rs. 60,000 being the profit on the sale of investments. The sum to be disclosed of is thus Rs. 9½ lakhs.

Depreciation takes off Rs. 1½ lakhs. Rs. 3 per share (free of income tax) is paid on each Preference Share. The *ad interim* dividend on the ordinary share was Rs. 5 ; the final dividend now proposed is Rs. 5 ; in addition, a bonus of Rs. 10 has been recommended, all payments free of income tax. The ordinary share of the paid-up value of Rs. 50, therefore, receives a distribution of Rs. 20 free of tax. This works out to 40 per cent. and compares with 35 per cent. in 1933 and 40 per cent. in 1931 and 1932.

The current market quotation of the ordinary shares is Rs. 342. For purposes of calculation, we may reckon that the current rate is roundabout Rs. 350. A payment of Rs. 20 on a share which is available at Rs. 350 works out to an yield of 5.7 per cent. tax free. This is as favourable a yield as an investor can hope to get in these days when all interest yields have come down rapidly and appreciably.

If one were to make a study of the current yields on the shares of jute mills in Calcutta, which are also joint stock concerns whose financial policy has been extremely satisfactory and whose reserve position shows remarkable strength, the average yield on good stocks works out to 4½ per cent. The Muir Mills can compare with any of the soundest jute mill in Calcutta. It follows that the yield on the Muir Mill ordinary stocks is fully one per cent. higher than is available on the generality of jute shares. From this point of view, there is still a good margin for rise in the equity shares of Muir mills.

There is no reason why these shares should not rise to over Rs. 400. Even at Rs. 400, the investor would still be getting the large yield of 5 per cent. tax free, which is double the yield which he can get on government securities.

From another point of view, the prospects for rise in the case of Muir Mills ordinary shares are equally bright. It may be taken as certain that the Government of India are committed to the policy of doing all that is necessary for ensuring a square deal to the Indian cotton mills. On the present basis of protection, the mills situated upcountry have a big pull over those working in the Bombay Island. Amongst the upcountry mills, there is hardly another cotton mill enjoying the impregnable strength of Muir Mills.

Its capital is modest and well-designed. Its reserves are abundant and well-invested. Its plant is conservatively valued, so much so that the allocation for depreciation in future years need not be (and I would add, should not be) on the present basis. The sales organisation and the sales campaign of Muir Mills are efficient and up-to-date. The Muir products are reputed all over the country. The management is in most capable hands ; and those in charge of the working of the Company are zealous of the great traditions that have been built up by the founders. The Muir Mills combine efficiency, enterprise, progressiveness and enlightened financial policy.

* * * *

The ordinary stocks of the Muir Mills are by far one of the most favourable propositions in India to-day.

"Watching the Watchdog" writes as under from Bombay:—

> The article on Tata Steel Company's prospects and Investment advisiabiliay in your issue of the 2nd inst., is here thought of as an inspired one.
>
> They say, only on November 9, 1934, the rate of ordinaries was Rs. 89-4 and that of Deferreds Rs. 394-6. Till now, you did not write any article with statistics as now—but after thousands of shares were bought by interested parties. When your article appeared to-day, the last closing was Rs. 147 and Rs. 585 for Ordinaries and Deferreds for March settlement; and they to-day closed at Rs. 148 and Rs. 693-12 or so.
>
> What is the mystery? Merely a recommendation by your Bombay correspondent since four months is no excuse. On December 2, 1934 the rates were Rs. 98 and Rs. 423-12 respectively. What is the mystery?

In sending the above letter, the correspondent adds:

> As you always act in the best interests of the public, I hope you will have the courage to publish my letter without disclosing, for etiquette sake, my name and address.

It is a pity that etiquette compels me to keep back the name of the writer. Otherwise my friends might be able to know if the correspondent is equally an interested party, that is to say, if he is a "bear." In that case, he will have to watch not the dog, but the "bull."

* * *

INVESTMENT BREVITIES

Reliance jute mill shares are most attractive, in this section of the market, at current levels. In fact, every company in Jardine Skinner group shows the best profit per loom and the highest yield per cent.

* * *

Central India Cotton Mill (Bombay) is heading for a rise. The shares are now about Rs. 405.

* * *

Bombay Trams are a good buy.

* * *

At every reaction, New India Assurance Company shares must be bought and locked away.

Worth while Investment

Britain:

BRITSH AMERICAN TOBACCO CO.

By GORDON CUMMINGS

This well known company was registered in 1902 to acquire the export business of the Imperial Tobacco Company (of Great Britain and Ireland), Ogdens Limited, American Tobacco Company, Continental Tobacco Company, Consolidated Tobacco Company, and American Cigar Company.

It is closely connected with the Imperial Tobacco Company of Great Britain and Ireland, which holds a substantial share interest, and is engaged in the manufacture, selling and exporting of tobacco and tobacco goods outside of the British Isles. The main source of revenue is derived from investments in subsidiary and associated companies, the latter including Imperial Tobacco of Canada, British Tobacco (Australia), and United Tobacco (South). A controlling interest is also held in Tobacco Securities Trust, with which it jointly controls Tobacco Insurance Company.

The present authorised capital is £36,000,000, of which £34,176,761 is issued in stock, divided into £4,500,000 5 per cent. cumulative preference, £6,000,000 6 per cent. second cumulative preference, and £23,676,761 ordinary stock. All issues are transferable in the form of £1 units of stock. Apart from small issues of ordinary stock—mainly for the purchase of additional shares in subsidiaries—there has been no large increase in the issued capital since 6,000,000 second preference shares were offered at par in October, 1929. At 30 September, 1925 the issued ordinary capital was, however, only £16,071,445, but in the ensuing year it was increased to £23,480,767, mainly through the allotment of a capital bonus of 25 per cent., and the issue to shareholders in July, 1926 of £3,241,994 ordinary shares at par. The issues of capital for cash were made in order to provide additional funds for further developments.

The 5 per cent. preference dividends are paid on 31 March and 30 September, second preference dividends on 30 April and 31 October, and the ordinary dividends quarterly in January, March, June and September.

Despite recent poor trading conditions in most countries abroad, the profit record is marvellously good. In the table given below results are set out for the last ten years:—

	Net Profit after Tax	Pref. Divs.	Ordinary % Earned.	tax free Paid.
	£	£		
1925	5,145,238	4,920,238	30·6	27-11/12
1926	A. 6,195,817	5,970,817	25·4	B. 25
1927	6,354,096	6,129,096	26·1	25
1928	6,563,560	6,338,560	26·9	C. 25
1929	D. 6,357,772	6,132,772	26·0	25
1930	6,501,560	5,946,560	25·2	25
1931	5,334,448	4,749,448	20·1	20
1932	5,438,253	4,853,253	20·6	20
1933	5,403,066	4,818,066	20·4	20
1934	5,452,981	4,857,981	20·6	20

A. Not including £755,299 taxation adjustments added to undivided profits.

B. Plus capital bonus of 25 per cent. in ordinary shares.

C. Plus capital bonus of 15⅝ per cent., satisfied by allotment of ordinary and deferred shares in Tobacco Securities Trust.

D. Before charging £100,000 transferred to Employees' Benevolent Fund.

During the last four years four interim dividends of 10d. each free of income tax have been paid annually, followed by a final distribution of 8d. per £1 of stock, making 4s. free of tax per £1 unit. On account of the current year, the first interim of 10d. per unit has already been declared.

Judging by the published figures, it would appear at first glance that profits have been liberally distributed, but in view of the conservative nature of the management it can be taken for granted that the disclosed figures are considerably below the total profits earned by the whole group. A note to last year's profit and loss account stated that profits of subsidiary companies only to the extent of dividends receivable therefrom were included in the parent company's profit and loss account. Such dividends, together with an amount transferred from reserve for losses of subsidiary companies, which was equivalent to the company's proportion of the net profit earned during 1933-34 by subsidiary companies formerly making losses, did not exceed the aggregate of this company's proportion of the profits less losses of subsidiaries for the year.

This is a case where it is, indeed a pity from the shareholders' point of view that the Directors do not see their way clear to publishing consolidated profit and loss accounts and balance sheets. It is certain that, if they did so, an even more impressive state of affairs would be disclosed.

In view of the above remarks, the balance-sheet does not really show the true strength of this combine, although the figures are certainly very impressive. Balance-sheets for the last two years ended 30 September, 1934, are summarised below, the figures being given after adjustments for final appropriations:—

ASSETS.

	1933	1934
	£	£
Property, Plant, etc. ...	1,429,004	1,350,176
Goodwill, etc. ...	200,000	200,000
Subsidiaries—Shares ...	20,315,565	20,323,672
Subsidiaries—Due (net) ...	1,834,651	3,830,397
Associated—Investments ...	4,084,924	4,027,567
Associated—Due (net) ...	127,612	364,251
Liquid Assets ...	15,829,434	13,498,785
	£43,821,190	£43,594,848

LIABILITIES.

	1933	1934
	£	£
Capital	34,083,761	34,176,761
Creditors, etc. ...	4,506,796	3,960,356
Stock Premiums ...	581,308	620,808
Building, etc. Reserve ...	650,000	675,000
Special Reserve ...	1,928,146	1,952,281
P. & L. Balance ...	2,071,179	2,209,642
	£43,821,190	£43,594,848

Expansion during 1933-34 in the net amounts due by subsidiaries was accounted for by an increase in advances to these concerns for the purchase of additional stocks of tobacco, etc. In view of the low

prevailing money rates, the opportunity was also taken of increasing the loans to associated companies. As a result, cash fell during the year from £9,096,727 to £8,037,383, the total of liquid assets at 30 September, 1934, being made up of the last mentioned figure, together with £273,059 investments, £3,488,831 stocks, and £1,699,512 debtors and short loans. The item for Creditors mainly represented final dividends, employees' benevolent fund of £112,143, and reserve for taxation.

As regards the value of investments in subsidiary and associated concerns, the auditors' reports for a number of years past have stated that these have an aggregate value largely in excess of the balance-sheet figures. If at any time the Directors decide to write up these investments to anywhere near their present real value a substantial capital bonus should accrue to ordinary shareholders. If this eventuality ever comes to pass, the bonus might be in further ordinary shares of British-American Tobacco, or a distribution of some of the investments as in 1928, when part of the ordinary and deferred shares of Tobacco Securities Trust were distributed.

With regard to the future it is only necessary to give the remarks of the Chairman, Sir Hugo Cunliffe-Owen, Bart., at the meeting held on January 7 last, when he stated "We are, as you see, in a very strong cash position and therefore well equipped to take advantage of any opportunities which may occur to enlarge your company's business. The only drawback to-day in having large cash reserves is that it is almost impossible to use such reserves advantageously in view of the present bank rate, and we were very glad to take the opportunity of making advances to our allied and associated companies to which I have referred, at a considerably higher rate of interest than we could obtain elsewhere." Dealing with prospects for the current year, he added "In a business like ours—which has world wide interests and which, as I have told you before, derives its profits from many sources—there are nearly always some good points, as at present, and always some that we are not satisfied with. Over a period of years, we are less dependent on any one market than we used to be, and to-day our profits are much less dependent on any one market than ever before." In conclusion he said that under existing conditions there was no reason to be other than satisfied with the prospects of the business at the present time.

In view of the cautious attitude always adopted these statements can be taken to indicate that profits will again show expansion for the year 30 September next. Amongst tobacco shares, Bats £1 ordinary units at 127s. are the best investment. On last year's 20 per cent. tax free dividend the yield is £4. 1s. 3d. per cent. gross. In 1928 they touched a highest of 146s., while the lowest price during the depths of the depression was 65s.

Combined preference dividends were covered almost ten times last year, so that these issues are almost gilt-edged, the 5 per cent. units yielding £3. 12s. 6d. per cent. at 27/6, and the 6 per cent., £3. 12s. 11d. per cent. at 33/-.

BRITISH COMPANIES IN INDIA

BENGAL AND NORTH WESTERN RAILWAY

Net earnings of the joint undertaking of Bengal and North Western Railway Company amounted to Rs. 1,78,78,189 for the year to 30 September last, against Rs. 1,84,57,798 for 1932-33. The company's share, however, increased from Rs. 1,02,97,602 in 1932-33 to Rs. 1,04,36,524, equivalent to £776,144 and £784,559 respectively after crediting small exchange profits. After adding £46,636 interest on reserves, against £48,628 in 1932-33, and deducting income tax and interest charges, there is an available balance of £568,427 for the past year, compared with £559,904 for the previous twelve months. The following table shows the alteration of these balances:—

	1934 £	1933 £
Net Profit	568,427	559,904
Less Allocations to Sinking Funds, etc. ...	79,895	77,614
	488,532	482,290
Less Preference Dividends ...	64,833	65,314
	423,699	416,976
Less Ordinary Distribution ...	420,000	414,000
Surplus	3,699	2,976
Add Brought Forward ...	97,012	94,036
Balance Forward ...	100,711	97,012

For the fourth successive year, the ordinary distribution is maintained at 16 per cent., made up this time of an interim dividend of 4 per cent. and bonus of 4 per cent., and a final dividend of 7 per cent. together with a bonus of 1 per cent.

Gross earnings of the joint undertaking for the year to 30 September, 1934 show a decrease of Rs. 3,43,307, the working expenses an increase of Rs. 2,36,302, and the net earnings a decrease of Rs. 5,79,609, as compared with 1932-33, which occurred entirely on the Tirhut section, due to the earthquake. Expenditure on earthquake damage repairs was estimated at Rs. 4,05,000 on the Company's section and Rs. 18,92,000 on the Tirhut section, or a total of Rs. 22,97,000.

During the year ended 30th September, 1934, Rs. 2,76,720 has been charged off on the company's section and Rs. 4,91,228 on the Tirhut section or a total of Rs. 7,67,948. It is hoped that the balance of Rs. 1,28,280 on the company's section will be charged off during the year ending 30th September, 1935, whilst on the Tirhut section it is expected that the balance of Rs. 14,00,772, which is to be met from funds provided by the Government, will be charged off by 31st March, 1937.

The following statement shows the results of working the joint undertaking for the past five years:—

	1930 Rs.	1931 Rs.	1932 Rs.	1933 Rs.	1934 Rs.
Gross Earnings	3,50,32,122	3,10,79,864	3,25,63,089	3,34,13,874	3,30,70,567
Working Expenses	1,57,46,459	1,49,33,473	1,43,75,987	1,49,56,076	1,51,92,378
Net Earnings	1,92,85,663	1,61,46,391	1,81,87,102	1,84,57,798	1,78,78,189
Percentage of Working Expenses to Gross Earnings	44.98%	48·05%	44·15%	44·76%	45·94%
Mean Mileage	2,079	2,105	2,113	2,113	2,113
Capital Outlay on open and unopen Line, including Stores	21,15,28,160	21,59,15,562	21,58,27,596	21,65,41,193	21,77,26,478

STOCK MARKETS MAKE MIXED SHOWING

BRITISH BANK RESULTS

PROSPECTS OF TIN & OIL SHARES

By R. GORDON CUMMINGS.

By Air Mail

Special for "INDIAN FINANCE"

London, Jan. 29.

Stock markets have made a rather mixed showing this week, the main features being South African gold shares and tin shares, the former receiving substantial investment support on the rather belated recognition, that those of the established gold producing companies are offering substantial yields at current prices. As I pointed out last week, public interest in tin shares is gradually broadening for the same reason. Even now after the good rises of the past few days, most tin shares are under-valued on prospects.

Government stocks were rather unsteady for a few days; but a hardening tendency was seen on Friday afternoon, when it was known that the average discount rate for Treasury Bills had reached a new low record of 3s. 10.91d. per cent. This compares with a previous lowest of just over 4s. 9d. per cent. on 22 September 1933. An additional disturbing factor was the announcement that underwriters had been left with 55 per cent. of the recent issue of 2 3/4 per cent. stock made by the London County Council. Dealings started at ¾ discount, but recovery was seen later. India loans were only slightly affected by the Reform Bill. Home railway stocks have been idle, but with no violent fluctuations. Traffics for the past week registered moderate recovery, taking the totals for the four groups.

Industrials have provided few features, principal activity being seen in *Unilevers, United Molasses* and *Lewis Berger* ordinary shares.

Oil shares have continued their upward movement with *Budmah Oil* a leading feature at around 4½. It certainly looks as though this rise is to continue.

Continued activity has been seen in Australian gold shares, although most prices are lower than last Monday. There has been substantial selling on the part of short term speculators, but a fresh rise is likely in the near future.

Investment Outlook

Certain sections of the popular Press have been rather bearish on the outlook for the Gilt-edged stocks. My own opinion is that the present set-back is only temporary and recovery should take place in the near future. Moderate lines of *Queensland* 3 per cent. 1922-47 stock, and *Union of South Africa* 3 per cent. 1954-64 stock are offering at 100 and 101 respectively, to yield around 3 per cent. The former is a good semi-short term investment. An issue of £9,800,000 3¼ per cent. debenture stock 1970-80 is being made at par by the *Mersey Docks and Harbour Board,* holders of an equivalent amount of 3½ per cent. debentures being offered the right to convert into the new stock. No less than £5,000,000 in cash applications, has been received in advance of the public issue. If the new stock can be obtained at anything up to 102 when dealings commence, it will make a good investment.

Big Five Bank Figures

Now that the full reports of the "Big Five" British Banks—Barclays, Lloyds, Midland, National Provincial and Westminster—have been published, it is possible to consolidate the figures of their balance sheets at December 31 last, and make a comparison with the 1933 year-end totals. The following table summarises the balance sheets for the last two years

Assets

	1934	1933
	£	£
Cash in hand and with Bank of England ...	196,727	201,997
Balances with other Banks, etc.	69,066	63,633
Money at call and short notice	138,364	106,752
Bills discounted ...	232,532	269,926
Investments ...	505,382	481,944
Liquid assets ...	1,142,071	1,124,252
Advances to customers, etc.	680,118	660,817
Acceptances ...	112,650	103,908
Bank, etc., Premises ...	42,481	43,623
Investments in other Banks	26,860	26,300
	2,004,180	1,958,900

Liabilities

Current, Deposit and other accounts ...	1,775,933	1,741,766
Acceptances ...	112,650	103,908
Issued Capital ...	64,716	64,716
Reserves ...	47,570	45,250
P. & L. Balances ...	3,311	3,260
	2,004,180	1,958,900

As shown, the assets of these five banks have expanded during 1934 by over £45,000,000, the total now exceeding £2,000,000,000—a truly colossal figure. Turning to the figures of the individual banks, changes under each heading of assets are not, however, uniform. Taking the individual items of 1934 and 1933 in turn, cash has fallen in each instance with the exception of Lloyds and Westminster. Each bank, however, records an increase in money at call, the increase in the case of Lloyds being over £12,800,000.

Apart from the Midland, bills discounted are lower in each instance, the greatest decline being almost £12,480,000 by Barclays. Despite statements that the banks were heavy buyers of investments during 1934, the increase in this item is not so large as might have been expected. National Provincial shows the largest increase under this heading with a rise of £13,213,000, while Lloyds is the only case where a decline has been registered.

Balances are satisfactorily increased, although further expansion is hoped for if the promise of improving trade means anything. The only decline is that of the Midland—down by £625,000—the chief rise being Barclays (£7,144,000) and Westminster (£7,866,000). Acceptances and endorsements on behalf of customers are an encouraging sign of the greater use of bills in trade, all banks, except the National Provincial, recording balances in these items. The Westminster shows an increase of £5,530,000.

Turning to the liabilities side, current, deposit and other accounts are higher all round, National Provincial figures being up by almost £9,000,000 and the Westminister total by almost £11,000,000. These figures, however, include unstated amounts reserved to cover contingencies, taxation etc., and final dividends.

Brighter Industrial News.

Some very encouraging reports and statements have been published by industrial companies, the most important being the preliminary announcement of *Imperial Tobacco Company*. In respect of the year to 31 October last, a final dividend of 7½% together with a bonus of 7½%, both tax free, are being paid making a total distribution of 22½% tax free against 20% for 1933. Profits carried forward are £1,139,000, or just over £300,000 more than a year ago. Taking into account the cost of the increased dividend, profits for the past year would appear to be practically £2,000,000 in excess of those for 1933, if a special credit of £521,000 from advertising reserve is excluded from the 1933 total figure of £8,114,608. On publication of these excellent figures the £1 ordinary units rose slightly to 143s. *British American Tobacco* are slightly easier at 126s.

The *Rover Company*, motor car manufacturers, inform shareholders that net profits for the 21 weeks to 29 December last were £54,211, after providing for all expenses. For the whole of the previous year, the profit was £94,440, but there was a debit balance of £182,073 carried forward. This, of course, is now further reduced. Shareholders are offered 210,000 shares of 8s. each at par, the cash being required to further strengthen the financial position, and to make provision for meeting an increased demand. The shares have reacted 6d. to 14s. 9d.

Leyland Motors, manufacturers of commercial vehicles, also experienced a satisfactory recovery in profits during the year to 30 September last, the net figure after providing for depreciation being £317,137, against £79,429 in 1932-33. The ordinary dividend, as already announced, is increased from 5% in 1933 to 12½%, and after transferring £50,000, against nil to reserve, a balance of £46,575 is carried forward compared with £29,520 brought in. The balance sheet discloses a sound position, but in view of the fluctuating prosperity of the motor vehicle business, the £1 ordinary shares must be considered somewhat speculative at their current price of 49s. 6d.

On the other side of the picture, it would appear that the London and Suburban gas companies have not done so well during 1934. Preliminary statements have been issued by *Commercial Gas, South Metropolitan Gas*, and the *Gas, Light & Coke Company*. In the first two cases reduced dividends are announced, the Commercial payment for 1934 being made up to only 5½ per cent., against 5¾ per cent., while the South Metropolitan total dividend is 5¾ per cent. compared with 6 per cent. in 1933. The Gas Light & Coke, however, is maintaining the year's distribution at 5.6 per cent., although the carry forward is reduced by over £3,000. On these announcements Gas stocks have been dull.

Newspaper Shares.

When times are bad, newspaper companies suffer in common with commercial undertakings, as the latter have an unsympathetic tendency to cut down their advertising expenses. It is well-known that most newspaper companies can only live by their advertising. It is not surprising, therefore, that profits for the last three years have, on the whole, been considerably below those of the years between 1925 and 1930. Advertising revenue of the leading daily papers has, however, been showing marked improvement of late, and suspect that practically every leading newspaper company will record expansion in profits during the current year. A lot has been heard in this country of heavy expenditure on competitions, free gift and book schemes put into operation with a view to maintaining circulation. I hardly think, however, that expenditure in this direction will have exceeded the increase in advertising revenue.

So far as the share market is concerned, the best known company is *Associated Newspapers*, which owns the *Daily Mail, Evening News* and *Sunday Dispatch*, together with interests in various provincial papers. This company's 5*s.* deferred shares are the most promising purchase at 26*s.* 9*d.* For a number of years up to 31 March 1931, annual dividends were 40%, but in 1931-32 there was a reduction to 25%, followed by 20% per annum in the two succeeding years. Payments are made quarterly, and the first three distributions for the current year have been at the increased rate of 26⅔% per annum. The final dividend will be announced towards the end of March, and it is possible that this may be at a higher rate than for the first three quarters. Earnings on the £2,765,337 of deferred capital have been well in excess of distributions during recent years. In 1927, shareholders benefitted from a 50% capital bonus.

The above company is virtually controlled by the *Daily Mail Trust*, which in addition has substantial share interests in *Daily Mirror Newsparers*, Anglo-Newfoundland Development Company, and E. Hulton & Company. Towards the end of last year, it was announced that the basis of investments had been broadened, these now including about 50 other holdings. In the near future the name is to be changed to Daily Mail and General Trust. Although not covered by available profits, 10% tax free dividends were paid for the years ended 30 September 1933 and 1934, while in the last year a bonus of 1¼% tax free was added. At the meeting in December last it was stated that investments with a book value of £4,046,588 had actually a market value in excess of £7,840,000, thus giving the £1 ordinary shares a break-up value of about £3. At 57s. they are a promising holding.

Somewhat more speculative, *Odhams Press* 4s. ordinary shares are still an interesting lock-up at around 11s. 6d. This company owns or controls over 40 different periodicals and publications including the *Daily Herald, People* and *John Bull*. The *Daily Herald* has now the largest circulation of any newspaper in the world ; and although it has cost a tremendous amount of money to establish the paper on its present basis, it is not likely to be long before this investment is profitable. For the year to 31 December, 1933, the ordinary dividend was 15 per cent., but actually 36½ per cent. was earned on the £750,000 ordinary capital. In 1932 earnings were 31½ per cent., compared with 27 per cent. in 1931 and 1930.

Tin Share Boom

Last week I dealt briefly with the outlook for the tin mining industry. Preliminary statistics have now been published for 1934 by the International Tin Research and Development Council. For the past year world production of tin is estimated at 107,700 tons, against 84,963 tons in 1933. World consumption in manufacture, however, was approximately 130,000 tons in 1934, compared with 134,000 tons in 1933, and only 106,000 tons in 1932. It now appears that the trend of consumption, which has been declining steadily from the middle of 1934, has probably reached its lowest level. Certain countries, especially Russia, Canada and Japan, are showing marked upward consumption figures, which combined with the announcement that the motor car industry in America is rapidly expanding, indicates that the production of tin will have to be increased.

It is estimated at present that existing stocks of tin represent only six or seven weeks' requirements at the present rate of absorbtion, without allowing for the reserve stock accumulated by the "buffer pool." The next revision of the quota will take place in a month or so ; and I shall not be surprised if the former rate of 40 per cent. against the present 30 per cent. is restored.

Two leading firms of dealers in tin shares have given me some interesting tables of statistics on the leading companies. Taking tin at £225 per ton, profits are calculated on the basis of the present

30 per cecnt. quota and also on full production. As a result, even on the present basis highly satisfactory earnings yields are shown, but if unrestricted production were to be restored, these earnings would be doubled, trebled or even quadrupled in many instances.

Last week I recommended *Kamunting Tin, Associated Tin Mines of Nigeria,* and *British Tin Investment Corporation.* All these shares have risen since, but are still worth buying. Additional selections offering scope for substantial appreciation are *Kamra Tin* 5s. shares at 4s. 9d., *Pattani* 5s. shares at 13s., and *Killinghall* 5s. shares at 12s. 9d.

Oil Share Outlook

The oil market have lately been over-shadowed by the uncertain position of the industry in America. While there is likely to be continuation of this uncertainty until something definite is done to restrict or control the production of crude oil in the U.S.A., I certainly feel that now is the time to buy oil shares. Prices may react slightly in the near future, but if they do, readers, who now act on my advice, should be prepared to increase their holdings.

The safest investment is *Burmah Oil* £1 shares at 82s. 6d. This company should be well known to all readers, of *Indian Finance,* but I would point out that by buying these shares investors obtain an interest not only in the Indian oil trade, but in practically every leading group in the industry operating outside America, as Burmah Oil has substantial shareholdings in Shell Transport and Trading, and Anglo-Persian Oil, apart from its other widespread interests.

Amongst the more speculative issues, *British Controlled* £1 preference at 9s. 1½d. and Apex 5s. shares at 27s. 6d. are likely to go better on a continuation of favourable sentiment. The shares of the Mexican Eagle and Canadian Eagle Companies are also promising lock-ups.

Market Pointers

There has lately been some knowledgeable buying of *Polikoff* 10s. participating preference shares at around 8s. 3d. This company manufactures clothing on mass production lines, but up to a year ago was not remarkably successful. At present preference dividends are over 5 years in arrear after taking account of a 4 per cent. payment some months ago. The trading outlook is definitely improving.

If the present demand for leading dividend paying gold shares continues, speculative activity is certain to spread to the shares of the newer developing companies. Lately there has not been much movement in *Van Dyk Consolidated Mines* 10s. shares, and *Kentan Gold Areas* 10s. shares, now 38s. 9d. and 11s. 6d. respectively. Both should sooner or later receive attention on the part of speculators.

Net profits of *Ashanti Goldfields,* the leading concern in the West African mining market, increased by £99,354 to £846,572 for the year to 30 September, 1934. A final dividend of 35 per cent., making 75 per cent. for the year is being paid, against 90 per cent. for 1933 on a much smaller capital. Compared with 1933, costs per ton were reduced by 7d. to 27s. 11d., while ore reserves at 30 September last fell by 44,932 tons to 584,818 tons with an average value of 24.0 dwts—an increase of 0.2 dwts. At 48s. 9d. ex-dividend the 4s. shares have scope for recovery to well over 50s.

An increase of 10 per cent. in the retail price of certain classes of motor car tyres should benefit *Dunlop Rubber,* whose shares were recommended last week. So far the shares have not responded to this news, being still quoted at 52s. 6d.

A first interin payment—of 2½ per cent.—is announced on the £1 ordinary shares of *Grosvenor House (Park Lane).* Following on the maiden 5 per cent. dividend for the whole of the last financial year, this announcement certainly indicates that the company is doing much better business as a result of increased spending power on the part of the public and the greater number of distinguished foreign visitors who stay at this well-known luxury hotel when in London. The shares have possibilities at 22s. 6d.

Provincial figures of the total coal output of Great Britain during 1934 show an increase of 13,842,000 tons over 1933, production being approximately 220,954,000 tons. Exports have shown a very satisfactory increase. This bears out my previous forecast that the coal trade was doing better.

THE BOURSES IN AIR MAIL WEEK

Paris

Though sentiment on the Bourse was quite healthy, business was on a reduced scale during the week under review. Speculators adopted a cautious attitude ; and operators were inclined to take profits, owing to the imminence of the Chamber debate on financial affairs.

On the Parquet, Bank shares strengthened and were steady throughout the week except on January 23, when a weakness set in following the absence of fresh buying support. Rentes and other Government issues were irregular. Industrials displayed a good deal of uncertainty and met with some liquidation. But Thomas Houston was the outstanding feature of this section ; and a sharp rise was recorded from 157½ to 174 on January 22. Raffinaire Say met with some enquiry. The firmness of sterling helped Internationals, especially Suez Canal shares, which, after dropping from 17,72 to 17,590, recorded 17,890. Rio Tintos which were steady during the major portion of the week lost 34 f. to 1190. Royal Dutch Petroleum were also easier. Central Mining at the outset improved from 1630 to 1647 but afterwards reached to 1,635.

Diamond Shares were irregular after having been firm during the early part of the week. Jagersfontein rose from 83 to 88.25 and both the preferred and deferred of De Beers issues appreciated. But there was a set back on January 21. They improved later on renewed buying interest but again lost ground, De Beers Deferred dropping from 428 to 419, and the Preferred from 898 to 899.

Several shares in the Gold Mining group improved, especially Sub-Nigels which advanced by 13 f. to 948. Crown Mines rose from 1018 to 1050 and Rand Mines from 536 to 585. Copper and Rubber shares mostly moved against holders, whilst oils were featureless.

Among Foreign Bonds, there was some slight recovery in 5½ per cent. German Young Loan ; but later it weakened and dropped from 444 to 436.

Berlin

A cheerful tone pervaded the Bourse in Berlin during the early part of the week and prices were generally firm with rises in most sections. But during the latter part of the week there was an irregular tone in most markets.

Bank Shares were the centre of attraction ; and many rises were recorded. Berliner Handelsbank was quoted at 103. Shippings were better. Rayons were dull and Minings unsteady. Industrials were fluctuating but Farbenindustries rose about 1/2 to 141.40. Electricals were irregular.

WALL STREET IN AIR MAIL WEEK

BETTER BUSINESS REPORTS

SPURT IN STEEL MILL ACTIVITY.

By F. Rocke.

January 24, 1935.

The uncertain fate of the gold clause continues to hamper Wall Street in its daily business ; another dull session has been recorded. This is unfortunate as the encouraging business reports which are now being received should have imported activity alround. Brokers were inclined to hold their hands until the Supreme Court's decision in the 'Gold Clause' cases was known. The main feature was the firmness of preferred stocks generally, following upon payments of arrears by Radio and Associated Dry goods. Some rail issues were bought owing to the proposal that the R.F.C. was going to lend money to enable companies to buy in their depreciated bonds. Steel Stocks were also firm on the increasing likelihood of another big rise in Steel Mill activity. Communications were exceptionally strong on account of the favourable report of the Federal Communications, Commission, which permitted mergers of communications companies and forbade the exclusive occupancy contracts by which Western Union prevented its competitors from running wires by the railroad tracks. The Commission also recommended that foreign ownership of Stock in a merger company should be limited to, at most, one fifth of the total. There was a retrogression in activity on January 21 when it was known that the Supreme Court had issued no verdict on the "Gold Clause" cases. But there was some rally and the market closed firm. The attention of the operators was, however, turned in the main to Washington.

In the Bond market Government issues were in greater favour than last week. The discrepancy between the gold Clause and Legal Tender issues narrowed, as the result of the sales of the former and purchases of the latter by the Reserve banks and Treasury agencies.

Treasury issues were quoted higher throught the week. Chileans were strong on the passage of the Bill providing for the debt service through the lower house. Utility bonds were the centre of attraction in this section, and there was considerable rise in prices, when it was known that the efforts to persuade the Administration to take a less uncompromising attitude to the companies was successful.

The railways have been the topic of the week and there was considerable activity in Rail shares when it was known that the R. F. C. was to come to the aid of the railways. A Bill was introduced in Congress on January 18 to permit the R. F. C. to make loans for a year after January 31. The measure also allowed greater lattitude with regard to advances by which the R. F. C. might guarantee railroad bonds ; and adequate security was no longer required. It is in relation to railroads that the future of the R. F. C. is under discussion in Washington. It is of the utmost importance, therefore, that investors should watch the developments of the Government's 'alphabetical agencies.' The uncertainties which prevail at present, doubtless offer considerable scope for speculation. But no forecast of likely developments is possible ; and one must watch and wait to see whether the weaker roads are to be left to their fate or assisted by state loans until some long-term scheme is worked out for their ultimate salvation.

The Corn Products Refining Company was mentioned in these columns last week in connection with the Commercial Solvents Corporations. These companies have jointly acquired several molasses concerns ; and together may henceforth dominate this industry in the United States.

The earnings of the Company have been remarkotherwise, is increased by this move. It is primarily engaged in the production of glucose and starch, and is responsible for about 75 per cent. of the total American output of the former. It also sells corn sugar, corn syrup and salad and cooking oils under a variety of trade names. There are also associated companies from which substantial revenue is derived, which produce dairy poultry feed.

The earnings of the Company have been remarkably steady. Earnings in the first nine months of 1934 were not up to the 1933 level amounting to only $2.23 per share against $2.68. This was due to the exceptional position caused in the industry by the abnormal smallness of the corn crop. In the full year the earnings would have covered the $3 dividend rate ; and this year they should improve appreciably. At the present price of 65 the yield is 4½ per cent. Though there is no probability of substantial Capital appreciation the stock can be recommended to those who want an investment with a good yield and an upward trend of intrinsic value. The preferred stock, which is not callable, stands at around 150 and gives almost the same yield as the Common.

There has been some disappointment with regard to the small increase in earnings in 1934 by R. J. Reynolds Tobacco Company. The directors have maintained the usual rate of dividend. The intrinsic position of the Company is good ; and the usual dividend rate was continued owing to the large amount of undivided profits. Cash amounted to $48,598,756, securities $341,161,950 and working capital $125,86.067. The fall in cash together with the increase in investor stocks by nearly $11,000,000 may give some cause for alarm, since it illustrates vividly the sharp rise in the price of raw tobacco. 1934 purchases were replacing stocks bought at the lowest prices since the War. This necessitates an increase in the price of cigarettes ; for otherwise profit margins would be appreciably lowered and it is expected that some step in this direction would be shortly taken.

The American Tobacco Company is proposing to raise a $25,000,000 loan to buy certain brands which are now issued ; and if this is successfully accomplished, the saving is estimated at 31 c. per share.

The Air Reduction Company has had an excellent record of earnings throughout the depression. It is mainly engaged in manufacturing and selling oxygen, acetyline and other gases and oxy-acetyline cutting and welding equipment. Its products are used almost in every branch of constructional industry. The excellent maintenance of profits, even when construction was dull, suggests that earnings now should be very high, as there has been considerable activity in the automobile, steel, building and shipbuilding industries.

Earnings per share of stock in the first nine months of 1934 totalled $3.66 against $2.54 in 1933 ; and it is believed that the full year's earnings may be in the neighbourhood $5. Dividend payments in the year amounted to $4.50.

The Company has no funded debt and no preferred stock. There are outstanding 841,289 shares of no-par Common Stock. The financial position is excellent. At the price of around 112, the yield assuming $4.50 dividend, is only 4 per cent. but with improving trade, there may be an increase in the dividend. The stock is therefore, a safe investment with possibilities of capital appreciation.

The improvement in the Steel industry has been maintained and there has been an increase in activity over last week. Orders from the automobile industry are satisfactory, and several exceptionally large orders for railroad steel are also coming in. Conditions are still expected to improve even though there has been a set back in the price of scrap metal. The National Tube company has purchased 35,000 tons of steel scrap. The Norfolk and Western Railway

has ordered 24,000 tons of rails from the Carnegie Steel Co. and 8,000 tons from Bethlehem Steel Corporation. Ford have increased their domestic production for February by 20,000 to 130,000 automobiles and Baldwin Locomotive Co. booked $21,935,000 new business in 1934, against $10,635,000 in 1933. Unfilled orders on December 31 were $9,462,000 against $4,358,000 a year earlier. As it is there is no relaxation in demand and there is nothing to portend a falling off in production.

It is expected that U. S. Steel Corporation will declare another dividend of 50 c. on the Preferred Stock, after which the arrears will total $11.25 per share. Bethlehem Steel Corporation, according to rumours afloat, is discussing with bankers plans for a large bond issue, in order to finance part of the Company's heavy maturities which are due in the course of the next eighteen months. Discussions are now going on about the merger of the National Steel Corporation and Inland Steel Co. These two concerns have made the best earnings during the depression and a merger would make them fourth in size in the industry.

The labour troubles are still unsettled and having regard to the facts given above we still hold to our view expressed in these columns last week, with regard to the outlook of Steel Shares.

The automobile industry is improving well and from the New York Automobile Show it was clear that Ford, though a formidable competitor, was not going to try to rout his rivals. General Motors' Chevrolet are looked upon as quite as attractive as the Ford Models.

In this connection, the Bendix Aviation Corporation should be mentioned. The name is rather misleading ; but the company is mainly concerned with the manufacture of automobile accessories, and particularly breaking equipment. It is very closely associated with General Motors, which has, if not control, certainly the largest single holding of the Company's shares. Bendix is, therefore, assured of a large proportion of the available business from the largest automobile producer in the country. Earnings in the first nine months of last year were 83 c. per share against 52 c. in the corresponding period of 1933. The financial position is satisfactory, showing a year ago, working capital of $9,040,000. The stock at around $16 holds net prospects of capital appreciation. It lost ground recently, partly on the general market uncertainty and partly on selling by speculators who bought for the show.

Among Preferred stocks Mathieson Alkali works Inc. can be recommended. The main considerations governing the transactions in preferred stocks are the high yield, the reasonable certainty of the dividend being paid and the marketability. Preferred stocks even of the leading companies are not generally traded in Wall Street ; but of late more than usual attention has been paid to them ; and there have been some marked price advances. The American Radiator, American Tobacco, General Motors and American Sugar Refining Companies shares are all quoted high ; and this, perhaps, has to be explained by the fact that these are companies which cater to the needs of various industries and which should benefit rapidly whenever recovery on a grand scale manifests itself as even during the depression they suffered worst.

The Mathieson Alkali Inc. produces sodas, liquid chlorine products, ammonias and similar chemicals, which are extensively used in the manufacture of glass, paper, textiles and other goods.

The capital is composed of $2,382,700 7 per cent. $100 par preferred stock and 626,263 shares of no par common Stock. In 1934 dividends totalled $1.50 unchanged from the previous year. At 28¾ the stock yield rather over 5 per cent. and there is room for capital appreciation. The highest quotation for 1934 wws 28¾ and lowest 23½.

Business pointers: Business news is encouraging and Steel Mill activity for the week is at 51.5 per cent. of capacity compared with 49 per cent. last week.

Electric output shows an increase of 9.4 per cent. New insurance for 1934 shows an increase of 10.1 per cent. over last year. Freight car loadings are as the same as last year.

Brokers' loan fell by $24,000,000 in the week ended January 23 to $634,000,000 according to the Federal Reserve Bank.

LONDON STOCK EXCHANGE

Rather dull conditions have obtained on the Stock Exchange during the week under review and there were no features of outstanding interest. The Stock Exchange has been dull and depressed owing to shifting foreign exchanges, troubles in the commodity markets and a surfeit of conversion loans. A flow of new loans in the gilt-edged market led to sales of British funds, and in the absence of buying by big purchasers prices gave way. On Thursday gilt-edged was dull and Indian Loans and Home Funds were quoted lower in the absence of support. 3½ per cent. Indian stock 1931 was quoted at 99, 4½ per cent. 1958-68 at 118½, 2½ per cent. Consols at 91 7/8, 4 per cent. Funding Loan at 120½ and 3½ per cent. War Loan at 108 3/8. Among other sections Minings have been active and Rio Tintos and Kaffirs were quoted higher. There was a setback owing to profit taking but they recovered later on. Teas and Rubbers were unchanged. Though there was no activity in Home Rails shares prices were well maintained. Industrials were dull but were fairly steady.

NEW YORK STOCK EXCHANGE

The market ruled dull and lower due to postponement of Gold Clause cases' decision. If the decision is favourable, prices will advance. If unfavourable, it is expectd that the Administration would take proper measures to counteract the bad effects.

COMPANY REPORTS

THE MUIR MILLS CO., LTD., CAWNPORE.

Report for the year ended December, 1934.

The Directors beg to submit the Audited Balance Sheet and Profit and Loss Account for the year ended 31st December, 1934.

The result of the year's working after payment of all charges and after providing for a bonus to employees and for estimated taxation is a profit of Rs. 7,91,628-15-3. Adding to this Rs. 60,316-0-3 being part realised profit from Investments and Rs. 1,06,530-0-0 being the balance brought forward from 1933, there is a sum of Rs. 9,58,474-15-6 available which the Directors have allotted as follows :—

	Rs.	A.	P.
Ad-interim Dividend of Rs. 1-8-0 per share on the Preference Shares, and Rs. 5-0-0 per share on the Ordinary Shares to 30th June	1,95,000	0	0
For Depreciation	1,50,000	0	0
	3,45,000	0	0
Leaving for disposal a sum of Rs. 6,13,474-15-6 which they propose to deal with as follows :—			
Final dividend of Rs. 1-8-0 per share on the Preference shares (free of Income Tax)	45,000	0	0
Final dividend of Rs. 5-0-0 per share on the Ordinary Shares making 20 per cent. for the year (free of Income Tax)	1,50,000	0	0
Bonus of Rs. 10-0-0 per share on the Ordinary Shares (free of Income Tax) ...	3,00,000	0	0
To be carried forward	1,18,474	15	6
Total ...	9,58,474	15	6

Improved trading conditions were experienced during the year.

Under the provisions of the Factories Act the working day was reduced to 9 hours with effect from 1st January, 1935.

Sir Thomas Smith having expressed his desire to be relieved of the active duties of Managing Director in March, when he will have completed 40 years service in India, and 20 years as Managing Director, the Board have accepted his resignation with much regret and have placed on record their great appreciation of the service he has rendered to the Company. They have invited him to continue on the Board and this invitation has been accepted. They have had pleasure in promoting Mr. Kenneth John Dodds Price and Mr. Thomas Irvine Smith to be Managing Directors on his retirement.

In view of these changes, shareholders are asked to increase the maximum number of Directors from four to six, and a resolution to this effect will be submitted to the forthcoming General Meeting.

T. Smith, Chairman, T. Gavin Jones, Ram Narain, H. Horsman.—Directors.

THE INDIAN WOOD PRODUCTS CO., LTD.

Report for the year ended 30th September, 1934.

The Directors have the pleasure to submit the Report and Statement of Audited Accounts of the Company for the year ended 30th September, 1934.

General.—The Factory worked continuously throughout the year apart from the usual annual stoppage amounting to 7 days for the overhaul of the Machinery and Plant.

The prices obtained for the Company's products showed a further fall during the year and this is evidenced by a fall in the Sales total of Rs. 63,717-10-7. Since the close of the year further reductions have had to be made in prices in order to meet competition, and it is probable that these lower rates will prevail throughout most of the current year. It is hoped however that the loss sustained will be offset to a certain extent by increased production due to the installation of new machinery.

Accounts.—As it is now considered that the majority of the items represented in the Block account have been written down to a conservative figure it has been decided that the sum allocated in the past to Depreciation may safely be reduced to a very much smaller figure, and this reduction has contributed materially to the slightly better result shown on the year's working.

It has further been decided that the Reserve in respect of Depreciation in the value of the Company's securities is no longer necessary as such and the amount of Rs. 29,000 previously shown under this heading has accordingly been transferred to Contingencies Fund.

The Profit on Revenue Account is Rs. 4,19,246-9-4 including the interest earned on the Company's Investments and a sum of Rs. 63,093-0-0 has been set aside for Income and Super Tax.

Stocks of manufactured goods have been valued at below cost.

After writing off Rs. 5,497 for depreciation on the Forest Concession and Motor Car, and providing for Calcutta Charges and Commission, the net profit for the year is Rs. 2,99,915-5-6. This sum added to Rs. 1,50,069-10-10 brought forward from the previous year gives a balance of Rs. 4,49,985-0-4 for disposal.

The Directors recommend that this should be disposed of as follows :—

	Rs.	A.	P.
Payment of dividend of 20 per cent. free of Income-Tax, on 119,850 Ordinary shares of Rs. 10 each	2,39,700	0	0
Transfer to Contingencies Fund ...	50,000	0	0
Carry forward	1,60,285	0	4
Total ...	4,49,985	0	4

Directorate.—Mr. S. C. Lyttleton having gone on leave Mr. T. S. Gladstone was appointed in his place.

According to the Articles Mr. G. L. Scott retires but is eligible for re-election.

Auditors.—Messrs. Price, Waterhouse, Peat and Co., the retiring Auditors, offer themselves for re-election.

Gillanders Arbuthnot and Co.—Managing Agents.

WORLD OF INDIAN FINANCE

Calcutta, February 15.

Another week of the same tenor. In the words of the manager of an exchange bank, "there has been no market like this for four or five years. Same as last week; worse if anything." Hardly any business in interbank call money because there are hardly any funds to loan out. Hardly any business in the exchange market because exporters do not like the present rates. The variation that was afforded to this monotony was the colossal setback that occurred in London in the early part of the week in the prices of shares and bonds. As was to be expected, the sympathetic effect on prices of securities in India was instantaneous and striking. London was recovering towards the close; so was India. The Government are piling up sterling in London; and the Imperial Bank is piling up profits on ways and means advances which it is only too glad to extend to the Treasury. Why should it not? If the Finance Member is so blind to his own interests, why should the Bank authorities teach him what is proper while that very advice would mean lesser earnings by way of interest. The ways and means advances have increased by Rs. 2 crores to Rs. 6 crores, and this is a month of heady revenue. Can anything be more absurd and topsy-turvy? If the Imperial Bank was really looking after the credit situation, it should have the courage to tell the Government that, in conditions in which the call money rate has come to be on a par with the Bank rate, it must refuse advances to the Treasury. It should make it clear to the authorities that the proper way of reimbursing the depleted coffers is by creating currency against the swollen sterling assets.

However, why it should be a matter for surprise if the attitude of a bank which has to satisfy shareholders is somewhat like that of a taxi driver who took a prospective Parliamentary candidate to a meeting which the latter was to address? The prospective member was waxing eloquent and spoke in inpressive terms for an hour. At the end of it, he was apologising for tiring the patience of his hearers. "Go on, mister, do not trouble to close your speech"—came a voice from the audience. When the address was finished, the speaker hunted for the appreciative listener and wished to know who he was. "I am the taxi-driver who brought you to this meeting" —was the startling information he received. Longish speeches suited the owner of the car whose meter was sticking all the time. Larger ways and means advances should suit the Imperial Bank who would be charging interest at God-knows-what rate. For, the public has no means of knowing what exactly is the basis of the interest that is charged by the Bank in the case of ways and means advances. It may be the Bank rate; it may be any definite percentage below the Bank rate; it may be the average rate of Traesury Bills during the week in question; or it may be an arbitrary rate fixed from time to time. Whatever it is, the Bank should certainly be happy to have the free balance of the Government and, at the same time, to be able to loan it at a very handsome profit. We wrote, last week, that we could not divine as to who was exactly the party that was being benefitted by the persistence of the Government in the deflationary policy. Deeper consideration has revealed to us the information that at least there is one party who stands to profit. We own, we have derived great consolation from this thought. It is good to know that this ill wind is blowing somebody some good.

Our readers must not think that all that we have said in the last paragraph is meant to be only a piece of smart sarcasm. It is our deliberate opinion that the Imperial Bank authorities are not conducting themselves like true custodians of the credit situation of the country so long as they do not pull up the Finance Member when he asks for more and more ways and means advances. This frequent and frantic recourse to ways and means loans is in total defiance of the purpose which the device of ways and means accommodation is intended to serve. If the Imperial Bank is anxious to oblige the Government, why should they not take, say, Rs. 10 crores of intermediate Treasury Bills and be done with it?

To create a situation in which ways and means advances are as good as equivalent to Treasury Bills is no service to the money market. We know that the Bank authorities do not like this plain speaking. On a former occasion, we had to criticise a like attitude on their part on the question of ways and means advances; and it was brought to our notice that our comments were unpalatable. But when there has been this truculent persistence of the financial authorities in a policy for which there is no justification whatsoever, we cannot but blame the Bank authorities for aiding and abetting an operation which has been condemned not only by us but by journals like the *Times of India* that are usually appreciative of most of what the Government do.

In a market thus puzzled over the ways of the powers-that-be and altogether "nervy," the news of the debacle in London came as an exaggerated shock. There has been great parallellism between London and India in a great many respects. Both had built up a considerable bullish account in bonds and equity shares. In this upward surge, speculators had naturally taken a large hand. For over a month, the markets just stood still; prices moved within narrow limits. The weaker bulls were getting tired. The quick harvesting they anticipated was not materialising. All over the place, warnings were being broadcast that the bulls had overshot the mark. The *morale* of the weaker bulls was being shattered by deferred hope. At the same time, a number of adverse factors was accumulating momentum. Three important new issues proved damp squibs on the London market. The underwriters were left with the "baby." Secondly, the suspense about the Gold Clause decision was most tantalising. That a great power like the United States should have kept the rest of the world on tenter hooks on a matter of such compelling importance is nothing short of a scandal. There should certainly be some kind of machinery whereby expedition in decision could have been ensured. Fairly authoritative hints were given that the decision of the Supreme Court might be adverse and that, however, the President was ready for such a situation with an emergency proclamation which will nullify the decision. Commonsense suggests that these hints must, doubtless, turn out correct. Nevertheless, the decision has been adjourned; and markets all over the world can do no more than mark time. Suspense is worse than bad news. This was the second adverse influence at work.

Thirdly, all the shout about Britain's trade recovery is partly unreal as the recovery is only sectional, confined to particular industries and particular areas. The nation has been lulled by banner headlines in daily papers that everything was getting O.K. and alright with Britain, and that Britain was the only country where everything was O.K. and alright. To a nation so buoyed up, a setback in unemployment figures came as a cruel reminder that things were yet not getting as O.K. as they all thought. Fourthly, a Labour Government seemed imminent. Horror of horrors! A real, hundred per cent. Labour Government not only in office but in power! What will they not do with the race of Money Bags? Will they not help themselves to all the money taken out of Messrs. Money Bags? Bank chairmen delivered long sermons against labour hopes about nationalising banks. Newspapers had ominous articles about the future of sterling and the future of British Funds? Vast preparations were afoot to fight this labour menace. Meantime, the holders of Funds were having their nerves racked. Fifthly, the Continent, even more prone to panic, put two and two together. Is not this increase in unemployment a serious thing? Will the Labour Government borrow in excess and depreciate currency in bigger doses? Who knows? Why not sell sterling? Why not sell sterling stocks? Causes like these have been gathering strength. If something cheering and outstanding had happened, say, a new loan and heavy over-subscription, the bearish factors would not have weighed. But what happened was just the opposite. The labour censure motion on the administration of social insurance was announced. Even usual Government supporters spoke strong and bitter against the Macdonald administration. This was the straw that broke the camel's back. The tired bulls lost heart and hastened to unload. Prices fell. They grew more panicky and were in greater haste to sell. Prices tumbled. They threw their scrips on the market for what they would fetch. The result was a first-rate crisis both in India and in London. But the intrinsic strength of the situation was not long in asserting itself. The crisis proved short-lived. Recovery was sharp and swift as the earlier collapse. The censure motion was thrown out by a heavy majority. This shake-out has done one great good. It has eliminated the weak bulls and the tired bulls. Those who are left in the market or who have now entered the market in the reaction make for a healtheir technical position. The market is now set for a cleaner, healthier and more uninterrupted rise.

The exchange market has been steady but with hardly any business turnover. There have been practically no bills. The rupee-rate has been steady for near and slightly quieter for forward. On the weekly tender day, applications were received for £ 1,745,000 at 1s. 6 5/32d., and were allotted approximately 57 per cent.

The closing rates were: 1s. 6 1/8d., March 15 T.T.; 1s. 6 3/32d., March 16-April 15 T.T.; 1s. 6 1/16d., April 16-May 15 T.T.; 1s. 6 1/32d., May 15-August T.T. and 1s. 6d., T.T. from September onwards.

Bills may be quoted: 1s. 6 7/32d., up to March 20; 1s. 6 3/16d., from March 21 to April 17; 1s. 6 5/32d., from April 18 to May 15 and 1s. 6 1/8d., from May 16 on to December.

Money has been in good demand with very little offering. Business was done up to $3\frac{3}{4}$ per cent. during the week. The closing rate may be quoted $3\frac{1}{4}$ per cent. Firms' money for call and three days' notice may be quoted 1 per cent. Onemonth and twomonth deposits $1\frac{1}{4}$ per cent.; threemonth deposits $1\frac{1}{2}$ per cent.; sixmonth deposits $1\frac{1}{2}$ per cent.; and twelvemonth deposits 2 per cent.

The sterling-dollar rate has kept fairly steady during the week under review, while the sterling-franc rate has sagged from the level of 74.40 at the beginning to 74.15 at the end of the week. The appreciation in value of the franc in relation to sterling probably marks the disappearance of the feeling that France is prepared for a measure of devaluation or that she would make tentative preparations therefor through a policy of reflation. Whatever the actual reasons for the changes in the international exchanges during the week, it is remarkable that we are practically back again in the position that ruled at the beginning of the year. The mood of hopeful expectancy induced by the announcement of monetary changes in France and by the impending visit of M. Flandin to London has now passed away. It is practically certain that no advance has been made either by France or Great Britain on the question of stabilisation as a result of the talks between the two Premiers. The utmost that they could have made of this opportunity is for each to present his own viewpoint in clear terms and to understand sympathetically the viewpoint of the other. The larger question of changes in the attitude of the Governments helpful to stabilisation may be considered later. Here it is important that the feeling is growing that the new monetary policy of the French Government has proved too inadequate during the very short time in which it had a trial.

A Paris message during the week points out that there was at the close of last week a fierce attack on the Rentes which fell sharply and that the market was of opinion that the war between the Government and the big banks had begun and that the cabinet would fall unless M. Flandin, the Premier, drastically curbed the banks. It is also believed in certain circles, the message continues, that the large banks are trying to force the currency issue and that by opposing the cheap money policy they will compel the Government to devalue the franc. Such an attitude is due to a consciousness of the inadequacy of the policy enunciated by the Government. We have it on the authority of the London Financial Press that during the short time in which the new policy has had a chance the only effect has been to put up short-term money rates without any fall in the rates for long-term money. The other purpose of the new policy, namely, the attraction of gold and currencies from the hoards has so far singularly failed, though, obviously, it is too soon to expect the hoarder to respond to the new measures. That this policy has not proved effective should be no matter for surprise. For, even while it was enunciated there was the unimpressive spectacle of the Premier advocating cheap money at one end and the Minister of Finance holding out assurances of a stable franc on the other. Though, theoretically perhaps, the two are not so incongruous, market circles are quite justified in viewing the success of such a policy with scepticism. Even if the policy were intrinsically sound, it has had such a bad start, that it would be very surprising, indeed, if it should ultimately produce appreciable results.

It is necessary in this context to appraise the significance of the virtual failure of the new policy to the question of stabilisation. The message referred to above suggests that the banks are out to force the hands of the Government in regard to the devaluation of the franc. The implication of the statement contained in the report is that the Government believe that, if a policy of cheap money rates is successful, then, the prevalence of cheap money might minimise the necessity for devaluation. It is inconceivable that cheap money could obviate altogether the devaluation of the franc. But it is quite understandable that the success of the Government in regard to low money rates would relieve the pressure of opinion in favour of devaluation, and the Government too might not be faced with such situations as arose when the Citroen Company was forced to close the factories. It is not known what plan the banks propose to follow in pursuance of their present idea. To some extent they are right in imagining that, if the present money policy is defeated, then, the Government would feel compelled to show themselves more accommodative in regard to the question of stabilisation. It would very much help to clarify the situation if the banks had taken this attitude before M. Flandin left for England.

It is certain that the attitude of France, Britain and the United States is not unhelpful to stabilisation. It is believed that the chief difficulty in the way of France devaluating is the fear that such devaluation on her part would be followed by counter-moves from England and the United States. The exchange of ideas between Mr. Macdonald and M. Flandin should have referred a great deal to this question. Though it is too much to expect that Great Britain will show herself ready to surrender her freedom of action in this regard, something should have been done to disarm suspicions of France on this account. The idea of an international monetary standard rules out the idea of any one or group of countries manœuvring for the advantage of depreciated exchange. And this means that the stabilisation of exchanges, which is of the essence of an international monetary order, should be based on an understanding among the principal countries as to the relation between them. The time has certainly arrived when the foundations of an international monetary order should be laid by a definite understanding as to the value of the dollar, sterling and the franc in relation to one another.

In his article on the End of Deflation, which he has contributed to this issue of *Indian Finance,* Dr. Paul Einzig deals with the changes that have come over men's ideas in regard to money and exchange. He records the fact that people are prepared to recognise that any undue sanctity for existing parties would involve trade and industry in serious difficulties and that even, theoretically, there is such a rigid limit to deflation that the maintenance of parity in all circumstances and conditions is impossible by achievement. With this reading of the position and with this view of the exchange problem, every one will readily agree. But Dr. Einzig goes farther and suggests that there must always be a certain amount of readiness to change the parity as and when conditions seem to require such a change. It is quite necessary that the excesses of France and the Gold Bloc countries in respect of deflation and monetary orthodoxy should not cause a swing to the other extreme of support for frequent change of parities. The problem before the world is to bring about a restoration of an international monetary standard ; and changes in parities after such restoration will assuredly precipitate a situation similar to what we are experiencing now. It is better far to eliminate the causes which might necessitate the abandonment of parities than to run the risk of a frequent recurrence of this chaos of currencies.

ON THE EVE OF BUDGET

A forecast of the budget presents special difficulties in the current year. The taxation and financial policy of the new Finance Member can be gauged only when we have before us at least his first budget. Besides, incidents like the recent Indo-British agreement make it difficult for us to know whether, in pursuance of such an agreement, any changes in duties so as to give greater preference to Great Britain might take place. There is another consideration. Various circumstances have combined to give a fillip to imports. The duties realised from imports have been higher. But this does not betoken any appreciable improvement in the economic conditions of the country. Which means, that it is not easy to judge of the probable realisations from income-tax and super-tax. It seems certain, however, that a few changes in taxation will be contained in the budget which Sir James Grigg will announce at the end of this month; and that, what is more important, it may be enunciating certain important changes in the fundamentals of taxation policy. A clue in this regard is afforded by the reply which the Finance Member made to the resolution on taxation which was discussed in the Assembly this mid-week. On Thursday, the Assembly took up the discussion on Dr. Ziauddin Ahmad's resolution recommending the Governor-General-in-Council to take immediate steps for revising the present taxation policy. So far as voting on this resolution was concerned, the Government remained neutral. In the result, Mr. Ranga's amendment urging a lowering of the incidence of taxation on the poor classes, Mr. Iyengar's amendment demanding a revision of the assessment of taxes on incomes below Rs. 2,000 and of the excise duties on matches and sugar, and the resolution of Dr. Ziauddin as amended were passed without division.

* * *

It is not the passing of these amendments or of the amended resolution which can give us a clue about the coming budget. For, we can hardly expect any change to be made in excise duties on matches and sugar. Nor is there any hope that Mr. Ranga's amendment will be more than a pious hope. If at all any action is taken in regard to the amendments, it is possible that the income-tax limit will be reduced from Rs. 2,000 to Rs. 1,500 or Rs. 1,000. But the real importance of the discussion centres on the observations which Sir James Grigg made. He admitted that the income-tax should certainly be reduced though he was not sure whether it had reached the stage of diminishing returns. He also agreed that the revenue tariff on imports was too high, too all-embracing and too complicated and that it was a hindrance of trade and a burden to consumers. He added that it ought to be overhauled. We believe that Sir James could not have, since taking up his office, had sufficient time to make an adequate study of these matters or arrive at final conclusions. This means that while there will be the lowering of duties in a few instances, the budget should be more valuable for the elucidation of the views of Sir James as to the lines on which this study for the overhaul of the customs duties should be undertaken.

The main facts about the budget situation are these: Against a budget estimate of Rs. 33.49 crores from sea customs duty on imports, the realisations in the first ten months of the financial year came to Rs. 32.37 crores. Export duties yielded Rs. 3.41 crores in ten months as against Rs. 4.70 crores budgetted for the twelve-month period. Amongst other duties, the most notable are Rs. 4.12 crores from excise duty on motor spirit in ten months against Rs. 4.70 crores which is the budget estimate; Rs. 2.40 crores on kerosene against Rs. 2.95 crores; Rs. 55.04 lakhs against Rs. 1.47 crores from sugar excise; Rs. 1.13 crores against Rs. 1.38 crores from match excise. The grand total from customs duties is Rs. 44.62 crores realised in ten months as compared with the budget estimate of Rs. 49.16 lakhs. There is thus a leeway of Rs. 4½ crores to be made up in two months. The average realisations per month work out to Rs. 4½ crores. It is, therefore, quite on the cards that the revised budget for 1934-35 will provide for Rs. 4 crores to Rs. 4½ crores in excess of the original budget estimate. This should mean that, even allowing for some short-falls in income-tax and a few other items, but taking into account lower interest charges due to successful loan conversions, the revised surplus would be not Rs. 19 lakhs as anticipated last February but anything like Rs. 3½ crores.

* * *

When we turn to the prospects for 1935-36, the position is even more favourable. In the first place, the various excise duties that were levied in the current fiscal year were not in force for the full twelve months. This means that the excise on matches, sugar, and steel ingots might give, perhaps, an excess of Rs. 1½ crores in 1935-36. The Finance Member will, therefore, have a surplus of Rs. 5 crores to deal with. Of this, the restoration of the 5 per cent. cut would absorb Rs. 1, crore. The balance should certainly be such as to give the promised relief to the income-tax payers. So far as income-tax is concerned, there are two classes who clamour for relief. There are those with incomes between Rs. 1,000 and Rs. 2,000 who were brought in the emergency budget of 1931. There is, secondly, the surcharge that was levied in the same budget. The latter category has found stout champions in the various Chambers of Commerce and other powerful bodies. It is, therefore, certain that the Finance Member would find it difficult to maintain the *status quo* in this regard. At the same time, the lowering of the income-tax limit to Rs. 1,000 was so universal a hardship that any Finance Member who is amenable to the voice of reason and justice cannot postpone action. Is it possible that a kind of *via media* will be found by reducing the surcharge to half and by lowering the income-tax limit to Rs. 1,500?

* * *

In these circumstances, that is to say, when the Government are almost sure of a handsome surplus, the levy of any new tax would be unjustified. When we make this remark, we have in mind the rumours, current for some time, that the budget is likely to impose an excise duty on cement. We cannot say that, in relation to the position which the Indian cement companies have built up in recent years, an excise duty would prove too onerous. But the simple fact of the matter is that the cement industry is enjoying a strong position not because of any adventitious aid, but because of the organisation for management and sales that was brought into effect by the Concrete Association of India and the Cement Marketing Board and by the rationalisation

methods which the various units in the industry had the foresight to adopt. It must also be remembered that this industry is not working to its full capacity. Yet another interesting point in this connection is that while rationalisation has brought down the cost of production and increased efficiency, these benefits have been passed on to the consumer by the lowering of cement prices by the cement concerns. To levy an excise duty on this industry would be to penalise efficiency and also to jeopardise further prospects of cheaper cement for the consumer. On the other hand, the cement companies may be obliged to reverse their recent policy and put up the prices. We are definitely of the opinion that, while no possible objection can be raised against the levy of excise duty if it is found necessary, this matter should be viewed in relation to the general policy of taxation, which, we have reasons to think, will be the subject of a careful and authoritative investigation.

* * *

There may be minor changes in duties, especially where it is proved beyond the shadow of any doubt that the present high rates have brought the law of diminishing returns into operation. Silver is a case in point. In the first year in which an import duty on silver was levied, the budget estimate of Rs. 1 crore was substantially exceeded. There can be no objection to a small duty on silver ; on the other hand, a small duty will benefit both the Government and the Indian silver market. But the screwing up of this duty in budget after budget had the effect of killing the goose that was laying the "silver eggs." We also hear reports that the surcharge on the British cotton imports will be removed, thus bringing the duty to 20 per cent. as against Great Britain. Bombay is responsible for the rumour that while the surcharge will be retained, an excise duty of 5 per cent. may be levied on cotton mill production. If the surcharge is removed as against Great Britain, the Indian mill industry will have to be grateful to Mr. H. P. Mody for this great blessing. For our part, we will not blame the Government. The millowners themselves have played their cards badly and have made it impossible for publicists like us to speak up for them. All that we need say is that if the removal of the surcharge were a scandal, the imposition of an excise duty would be both a political and economic crime.

END OF THE NATIONAL GOVERNMENT

There is a singular concensus of opinion to-day that the end of the National Government is near and that the world should be prepared for striking changes in British politics. Though it is true that no party in a democratic constitution can expect to continue in power indefinitely, the National Government may be said to have been doomed from the moment it took office. Striking as was its success at the polls on the last occasion, no one in Britain ever missed the fact that the National Government rose to power on the virtual ruin of two major progressive parties. The "National" Liberals and Labourites broke the heart of their lifelong friends before they entered the bosom of their historic enemies. And none but the most cynical would fail to look for speedy retribution. The origins of the National Government are, indeed, such as no member of it can feel proud of. Its election tactics consisted of the creation of an unreasonable scare and the holding out of the most extravagant promises. The country was stampeded into overthrowing the Labour Party, which had served the country well, and voting for the virtual dissolution of that historical system of party government which is the pride of British politics. The Government was formed largely by the deserters from each party ; and the deliberate dismemberment of the Labour and Liberal Parties which the Conservatives carried out has had its nemesis to-day in dissensions among the Conservatives themselves. The enormous majority, which the Government enjoyed in both Houses, prevented the emergence of an effective opposition and ruled out every chance of the Government being defeated during the tenure of the present Parliament. And it is the unenviable achievement of the National Government that it has weakened itself even in this Parliament.

* * *

The reason for these changes is not far to seek. There is a long list of sins of commission and omsision with which the National Government may justly be charged. The opponents might well follow the Biblical course of judging "out of thine own mouth." At the time of the dissolution of the Labour Government and the general elections which followed, the supporters of the National Government made out that the pound was in danger, that the National budget was unbalanced, that the Labour Government had neither the will nor the capacity to protect the pound and the national finances, that the state of the national economy required energetic measures which were not in accord with the new-fangled notions of Labour and that the only course which the public could take was to send a party with an absolute majority in the House to support the programme sponsored by the leaders of the National Government.

* * *

As pointed out already, the National Government were out to create a panic in the country ; and their methods were so effective that they secured overwhelming support. But the last few years have not only shown that the Government have failed to redeem their promises but also induced the suspicion that they could not have commanded much confidence in their capacity to do so. That the pound was in danger can by no means be regarded as a discovery of the middle of 1931. The folly of the return to the gold standard was apparent almost soon after it was decided on. Equally may

it be said that from July, 1931 the hope of saving the pound, in the sense of avoiding devaluation, was altogether forlorn. The event has proved that in refusing to be dictated to by a clique of American bankers in regard to matters of internal administration for the sake of a loan for protecting the lost pound, the Labour Government showed a far better political insight and economic understanding than those who hustled them out of power by such questionable methods. What is important in this context is that those, who promised to save the pound in August 1931, were guilty either of a total lack of understanding or a cynical disregard for truth. But the more serious part of this is that the electorate should have been led to believe that the abandonment of the gold standard, with which the country was then "threatened," far from being a sorely needed reform, was a danger, from which protection should be sought at the price of cherished political principles. The monetary and exchange policy, which the Government has pursued, is a contradiction of the principles which they professed at the elections. But this may be overlooked as the world as a whole has learned but slowly in the school of actual experience. But one would expect that traces of that policy would linger and manifest themselves at least when the occasion was appropriate. It is to the discredit of the National Government that it showed a thorough incapacity to size the international monetary situation when the first Preparatory Committee of the World Economic Conference met in the third quarter of 1932. It will be remembered that at that time both France and the United States endeavoured to persuade Great Britain to return to the gold standard and thereby save the world the disorganisation which would result from increased defections from the international monetary order. It is agreed on all hands to-day that, if Britain had stated terms which were possible of fulfilment by France and the United States of America, stabilisation would have been possible and the world might have groped its away back towards an international monetary standard and all that such standard means to world trade and industry. If the National Government had an insight into the state of world economy and the principal developments of the future, it would have seen that Great Britain would not be left to monopolise the benefits of depreciation, and that the better course would be to bind the nations to definite parities and thus help the resumption of freer international trade. On the other hand, the national Government felt that they had come by a strange chance by the boon of depreciation, that the abandonment of the gold standard had reduced the foreign nations to the position of supplicants for British favour, and that they were in a position to dictate the terms on which they would agree to Britain returning to the gold standard. It should not, of course, be overlooked that the reasons, for which the United States of America had to devalue the dollar, were such as could not have been foreseen at the time of the Preparatory Committee. But this cannot alter the fact that the National Government showed itself at the time to be singularly lacking in an understanding of the position and of the dangers with which Britain and the world were then threatened.

* * *

To have missed the insecurity of Britain's vantage is but a poor testimony to the financial acumen of the British Government. About the same vital defect was seen in the negotiations which were carried on in the World Economic Conference regarding stabilisation. But for the courage of Mr. Roosevelt, who readily monopolised the responsibility for the breakdown of the Stabilisation Agreement, Britain would have had to bear the blame for the failure of the Conference. To this day, the National Government have not given any assistance to the solution of the international monetary problem, except that they have maintained sterling in the purely technical sense of ironing out the more violent fluctuations in the exchanges.

CALCUTTA

In the sphere of national finance, too, there has been no achievement to compare with the promises that were held out at the time they came to office. It must be said in fairness that the Government have been able to secure very substantial savings for the taxpayer on account of interest charges on the public debt. This is, no doubt, something for which the country must feel grateful to the Chancellor of the Exchequer and through him to the Government of which he is a member. It must also be conceded that on every occasion the Treasury showed a capacity for intrepid tactics in their dealings with the market. But when one comes to think of it these savings on the interest charges and the decline in the borrowing rate of the Government must follow inevitably from their failure to save the pound or to stimulate trade and industry to any appreciable extent. When the currency of the country has been forced off gold and a policy of cheap money is followed in sheer exultation over the freedom from the fetters of gold, there has to be either a revival of trade or a phenomenal fall in interest rates. The rise in the prices of government securities cannot, therefore, be viewed as a vote of confidence in the Government's financial policy, but is only a reflection of the low state of trade activity. However true it may be that the cut in interest charges was inevitable, it must be set to the credit of the Government.

* * *

As for the revival of trade, there was, indeed, no reason at any time to hope that the Government would achieve anything substantial. The Cabinet consisted of either Conservatives wedded to old world notions of protectionism and its modern variants or Liberals who had never succeeded in understanding the cult of Liberalism or imbibed any of its historic traditions. The figures of unemployment and the balance of payments which are the acid tests of the national prosperity are intractably unfavourable. The former has virtually stabilised itself at the level of one million ; and the latter by all accounts was worse in 1934 than in 1933. The utmost that could be claimed for the policy of bilateral pacts, is that it prevented a further deterioration in foreign trade. What an anticlimax for the pompous pronouncements of 1931! So that it may be said of the National Government that they have not redeemed any of their promises, either in respect of the pound or the national budget or the foreign trade of the country. Nor can they claim to have learned during the period they have been in office and to have followed a policy which is the best under the circumstances.

* * *

While these are only sins of omission the policy in regard to unemployment insurance is an unpardonable sin of commission. The majority of the National Government are Conervatives who masked their indifference to human suffering with specious pleas of a narrowly technical kind. The reform of unemployment reliefs of various kinds began under the plea that in the Labour regime unemployment insurance has ceased to have any of the characteristics of scientific insurance. While this charge cannot be denied, it cannot follow that the reform of unemployment relief should have no consideration for the people whom it affects. This is hardly the place to go into details of the question. The depth of the resentment the Government have caused may be gauged from the outburst of Mr. Buchanan in the House of Commons and the overwhelming success of the Labour Party in the various bye-elections. Constituencies which had stood solid for the Conservatives for decades have gone over to the Labour Opposition. Even within the Parliament, dissatisfiaction with the Government's policy has risen steadily ; and it is significant that the grossly unparliamentary terms, which Mr. Buchanan used in his attack on the Premier, did not induce anyone to rise to a point of order ; with the result that the speaker could not give a ruling till the question was raised on the following day by a member, who was not present at the time of the speech. The London Correspondent of *The Hindu,* points out that the explanation of this strange conduct on the part of the members of the House of Commons lies in the fact that the whole House felt as deeply on this question as Mr. Buchanan himself.

* * *

It is hardly surprising that the dissatisfaction with the National Government should manifest itself in the form of gross personal abuse against the Premier. Mr. MacDonald, doubtless, has his convictions, but he is far from convincing. It is impossible to persuade oneself that in August, 1931, he could have foreseen any good to the country which could compensate the disruption of a party with which the future of the country must, in any case, lie. Though it is possible that Mr. MacDonald could have overrated his importance in the solution of the crisis of 1931, he could not have had any illusions about the extent to which he could influence or shape the policy of the National Government. The Labour Premier should have known that the Conservatives agreed to take office under him only to preserve the camouflage of a National Government and that after a stage he could remain in the Cabinet only at the price of all the principles which he professed over a lifetime. At the end of three years of "National" government, there was hardly anything National or Socialist left in Mr. Ramsay MacDonald. For all practical purposes, he was a Conservative. Neither in domestic or foreign politics, nor in matters of intimate concern to the working classes did he reveal any trace of Liberalism, not to speak of advanced Socialism. That a Socialist Premier should have stuck to a National Government, from which even the Liberals had fallen off, is a

INDIAN TEA LICENSING COMMITTEE

Registration of quota transfers, 1934-35.

PRODUCERS OF TEA ARE HEREBY notified that the latest date for registration of transfers of export quota rights in respect of the year 1934-35 is Wednesday, the 20th March, 1935. Quota transfers will not be registered unless the necessary transfer forms are received by the Joint Controller concerned, from both parties to the transfer, by 5 p.m. on that date.

A. C. DANIEL,
Secretary.

INDIAN TEA LICENSING OCMMITTEE

Notification to Shippers of Tea 1934-35.

Shippers of tea are hereby notified that the latest date for applying for an ordinary export license in respect of the year 1934-35 is Wednesday, the 20th March, 1935. Export licenses applied for will not be issued by the Joint Controller concerned unless the requisite details called for on the license form, or application form in the case of sold tea, are supplied at the time of application and must be received in the office of the Joint Controller concerned by 5 p.m. on the above date.

A. C. DANIEL,
Secretary.

condemnation alike of the Premier and the Cabinet of which he is the titular head.

* * *

The situation which has resulted from the disillusionment about the National Government is naturally noted by the leaders; and the last one month has seen developments which at least at first sight seem to be pregnant with possibilities. The Labour party has renewed its attack on the Government; and the confidence which is born of its recent electoral successes has induced its leaders to look more closely into their programmes. Mr. Lloyd George has inaugurated a campaign in favour of a New Deal; and though its lack of concrete details or any new idea is not missed by any one, the National Government see in it a new challenge; and rumours have been afloat that there is shortly to be a re-shuttling of the Cabinet with a view to draw Mr. Lloyd George into office. As Mr. Williams points out in his contribution to this week's *Indian Finance*, much would depend on the exact office which will be offered to him. It must not be overlooked at the same time that in any bargain that Mr. Lloyd George and the National Government might be making between themselves, they might ultimately prove to be counting without their host. Labour, judging from the comments of the *Daily Herald* on Mr. Lloyd George's New Deal, is supremely indifferent to this belated bid for power or popularity. Unless the English worker exhibits at the last minute a strange feeling of horror for a Labour Government, the next elections might well give an absolute majority to the Socialists. The supporters of the present regime have already started a propaganda against Labour; and Mr. Williams has referred to the efforts of the Banks to influence the millions of depositors in whose minds it is the easiest thing to arouse the fear of losing their savings. It remains to be seen what effect this clever propaganda will have on the depositors, or what Labour will do to disarm these fears. But it is certain that, so far as India is concerned, a Labour Majority might help to rescue the country from the constitution with which we are now threatened.

— —

BANK OF MYSORE

The Bank of Mysore reports another satisfactory year. The balance-sheet figures are more or less unchanged; and they reflect the neat balance between capital and deposits, and between deposits and liquid assets, which has always been a feature of the working of this Bank. The only change of note is the amalgamation of the Building Reserve with the General Reserve Fund, bringing up the latter to Rs. 22¼ lakhs, which is Rs. 2¼ lakhs in excess of the paid-up capital. Liquid assets are also larger by Rs. 1¼ lakhs and stand at Rs. 95 lakhs against deposit liability of Rs. 193½ lakhs. No bad or doubtful debts. The profits at Rs. 4.90 lakhs compare with Rs. 4.44 lakhs in 1933. An increase of Rs. ½ lakh in earnings has enabled the Bank to stabilise the bonus inaugurated in the second half of 1933, and to increase the carry-forward from Rs. 35,337 to Rs. 74,944. The present dividend distribution is Rs. 14 on each share of Rs. 100. The current market value of the Mysore Bank shares is Rs. 277½. The shares, thus, give an yield of 5 per cent. tax-free, which makes these shares one of the most attractive investments available in India to-day.

THE TRAVANCORE NATIONAL BANK

Eavesdropper writes:—

This is another of my Small Ten of South India. The Travancore National Bank has made satisfactory progress in 1934 in every regard. The issued capital has been raised from Rs. 16 lakhs to Rs. 20 lakhs; and the paid-up from Rs. 5.20 lakhs to Rs. 7.77 lakhs. The new issue was greedily taken up; and the directors are in the happy position to report that "though there is still a keen demand for the shares of our Bank, we are not for the present placing any more shares on the market." Deposits show gratifying expansion. They have gone up from Rs. 58.33 lakhs to Rs. 79 lakhs. Against which, the liquid position has been correspondingly strengthened. Giltedge holdings have risen from Rs. 10.46 lakhs to Rs. 12.49 lakhs and cash from Rs. 8.38 lakhs to Rs. 14.80 lakhs. For our part, we would like to see further expansion of the giltedge *portfolio*. The liquid assets are 185 per cent. of the demand liability and 35.5 per cent. of the total liability. The Bank opened three new branches in the year, the total number of branches being no less than 29. The earnings in 1934 are higher at Rs. 80,767. The Reserve Fund receives Rs. 30,000 and now stands at Rs. 2½ lakhs. The dividend paid is 9 per cent. tax free—quite a creditable record.

HUMAN RECLAMATION

Addressing a large gathering at Kumbakonam on the subject of "Agriculture and Education," Mr. S. V. Ramamurthi, I.C.S., Director of Agriculture, made a stirring appeal to educated young men to pull their weight in the national team to remove illiteracy. "We are poor because we are illiterate: we are illiterate because we are poor" was the burden of Mr. Ramamurthi's address and he proceeded to answer the question: "Is there no way of cutting the vicious circle?" It is a mistake, he said, to suppose that we have to deal only with soil, seed, season, implements and pests in agriculture. The primary factor of importance is man, who has been neglected. The removal of illiteracy and the fitting in of educated men in the agricultural framework constitutes our real task. Modern agriculture needs literate masses and educated leaders to appreciate and make use of the considerable volume of scientific research in India which, Mr. Ramamurthi thinks, is as high in quality as anywhere else in the world. And in the avenues of agriculture, educated Indians would find employment and service.

Developing his theme, Mr. Ramamurthi remarked that the right of the State to a year or more of the life of its citizens is recognised in many countries. Human reclamation is India's main need as against, for instance, Germany's need for land reclamation. To that end, Mr. Ramamurthi suggested conscription of the services of citizens in the Madras Presidency where natural conditions are favourable to agricultural development. Conscription in the war against illiteracy should be obligatory and the University should insist on six months' human reclamation work before giving degrees to graduates. The cost would be that of board and lodging, which could be arranged at a nominal figure with village panchayets. For a more extended campaign, Mr. Ramamurthi advocated an Education Fund on the analogy that "just as ryots are advised to borrow money for land reclamation and improvement in the belief that from increased profits of the future they can pay back the debt, so, too, the community may borrow money for human reclamation in the belief that it will repay the debt from increased income of the community." Mr. Ramamurthi has made an appeal to the educated public, being "convinced that if a census were taken among the educated community in Madras, the majority would be in favour of a scheme of intellectual conscription because it would ultimately raise the economic position of the whole community and immediately help to slove unemployment among educated men."

* * *

We are aware that Mr. Ramamurthi has been wondering for some time whether the problem of Indian agriculture is not a problem of improving the agriculturist in other words a problem of the men rather than the methods. And his idea of conscription for the army of teachers which this country requires is similar to the proposal we made recently that there should be a five year Plan for the removal of illiteracy and that every educated men should pledge himself to accomplish the elementary education of at least five children to whom the ordinary facilities of school education are not available. We should rejoice to see Mr. Ramamurti increase public interest in this problem and a solution on lines which would obviate any forbidding financial outlay.

Is the managing agent to be or not to be?

Solutions to this great puzzle are conflicting and may be roughly classified as under:

Bombay Shareholders Association :—No.
Federated Indian Chambers :—Yes.
Dr. John Matthai :—Yes, but on conditions.

Eavesdropper would like to be bracketted with Dr. Matthai, as would have been apparent to readers who had given any attention to the series he wrote on this topic nearly three years ago. Curiously enough, this series appeared just prior to the submission to the Government of Dr. Matthai's classic report on the cotton textile industry in which is devoted an entire chapter to the managing agency system. Great wits jump, as De Quincey might say. It was, indeed, a flattering thought to know that the opinion of one whose main claim is that he has had practical experience of company affairs for over a decade and a half coincided with the considered judgment of an eminent and impartial student of economics whose standpoint was scientific and objective and whose knowledge of Indian industries was both intimate and varied, without being interested or biassed. The memorandum, which the Bombay Shareholders' Association have submitted to Mr. S. C. Sen (Special Officer for Company Reform), is, in the nature of the case, a kind of answer to the conditional support which the Tariff Board report on cotton industry gave to the institution of managing agents. It follows, then, that the Shareholders' Association have set out, in this admittedly valuable document, to demolish the case that I myself put up in my series.

Dr. Matthai, from his official position, cannot answer the critics ; the responsibility is all the greater on me, to deal with the issues raised by J. J. Kapadia and friends. It is with great hesitation and even trepidation that I have to take on this task, as every point made out by Jagmohandas is documented, fully and aptly supported by concrete instances, definite facts and proven figures. I may as well admit, at the very beginning, that the extreme viewpoint urged by the Association is couched in temperate language and argued in convincing terms. This, again, does not lighten my task. Far from it. For, a foe in anger is easy to dispose off ; if your enemy is thoroughly poised and perfectly self-possessed, he is truly and vastly formidable. Yes, the indictment of the Association is formidable, vigorous and all-searching. Nevertheless, I do believe that they have overstated their case ; and I shall, as in duty bound, explain the reasons for my belief.

Their statement begins with a frontal attack. The opening paragraph may, fittingly, be the concluding peroration: "The managing agency system in relation to new companies should be prohibited by law and in relation to the existing companies, the same should be statutorily controlled." And they proceed to elaborate twenty-seven items in regard to which they want to devise statutory control. With a good many of the measures of control, everyone will be in complete agreement, not excluding the representatives of the better class managing agency firms who find themselves tarnished with the same brush as is applied to the admittedly bad ones. The Association would purge the system where it now exists, and bury it fathoms deep so far as new entrants to the world of joint stock concerns are concerned. I would, equally, urge the reform of the system but would vote, also, for the retention of the reformed system as a speciality of Indian company management in regard to industrial enterprises. In their main thesis, the Association have taken, as the text, the observation of the Tariff Board that, by virtue of the financial assistance rendered by the agents to the industry, the managing agency system is, under existing conditions, indispensable to the cotton textile industry. The Association, apprehending that this view of the Tariff Board would be utilised by vested interests in defending the system as applied to other industries, have examined the claim that agents have provided finance and thus proven their indispensability ; and, after demonstrating that this claim is hardly justified, they seek to establish that the very bottom of the Tariff Board's conclusion is knocked out.

In this connection, they score a fine point when they declare:

> "It must be remembered that the Board's report was written before the financial crisis that overtook Bombay in the latter part of 1933. We believe that the Board's views would have undergone a radical change had their report been written after this crisis."

For one Tatas who came to the rescue of the great steel company in its darkest hour, there are umpteen Currimbhoys and Charis who had sought refuge in their companies, to the detriment of the latter. "You talk of cases where managing agents have financed companies ; here are scores of instances where companies have financed managing agents. The fomer are few and far between ; the latter are plentiful and frequent" —declare the Association. The plea of the Tariff Board in this regard cannot, it must be owned, hold water. And, then, why should there be this necessity for the condescending financial succour from managing agents? Why should not companies be floated with adequate capital to cover the block cost and working capital? Is there not a deliberate design and sinister purpose in floating companies on an insufficient capital plan ? Is this not a dodge to enable the managing agent to come on the scene as if he were real God-send ? Is

not this under-capitalisation an artificial prop, an evil for which there is a ready remedy ? Does not the English Companies Act of 1929 tackle this mischief by enforcing that no allotment of share capital to the public can be made unless due provision is made for the purchase prise of the property to be acquired plus the working capital plus preliminary expenses ? Does not this provision bring the law as to minimum subscription as nearly as possible within the original intention of the legislature (vide paragraph 42 of the Report of the Greene Committee)? Is there any difficulty or objection in engrafting a like provision in the Indian Companies Act ?

To say that the Indian capital market would not put up the full capital requirements is disingenuous. To link under-capitalisation with the so-called shyness of the Indian investor is to argue against the verdict of actual facts. In the boom of 1919-21, we did not see any coyness in the investor ; on the other hand, he was more forward than prudent. Equally conclusive is the testimony of recent years. The sugar companies sponsored by Begg Sutherlands, Govan Brothers and the Mysore State were planned on an adequate capital basis ; and they experienced no difficulty in securing their full needs. On the contrary, it was the public that had difficulty in securing shares in these ventures. It is only the sugar concerns fathered by Indians, which sought to be extra-smart by keeping the capital small that the dividend allocation may be bigger. May be, dividends would work out to higher percentages ; but this must prove the most effective trick for managing agents to retain a vicious grip over the concerns. The Tariff Board state: "In our experience of Indian industries, we have seldom come across a case in which sufficient funds for working as well as fixed capital has been found in the form of paid up share capital, even where a firm is started under the auspices of a reputed managing agent." The blame for this state of affairs must not be laid at the door of the Indian investor. It is the company promoters whose greed or trickery must be blamed. I entirely agree with the Shareholders' Association that given a good proposition, the public are ready to put up the necessary capital.

If the utility of the managing agency system is to be based on the financial assistance which managing agents might render to the companies, the case is weak, indeed, for the retention of this institution. I agree with the Shareholders' Association that to rely on managing agents for finance is neither satisfactory nor desirable nor dependable ; and that the law as regards minimum subscription should be changed so as to prevent under-capitalisation.

---

5 per cent. of the issued capital is generally the minimum subscription, as contained in most Articles of Association. 5 per cent. of issued capital is a travesty of the purpose for which the provision for minimum subscription is enforced. My defence of the managing agency system is unconnected with the financial consideration. In the first place, the Association has failed to prove that any other alternative, which may be fashioned in the place of the managing agency system, will not be liable to the same abuses to which the managing agency system has led. In the second place, I maintain that while bad managing agents have been a drain and a menace, good managing agents have been a great strength and a valuable asset. Even the Bombay Shareholders' Association admit that the managing agency system has functioned well in Calcutta. Nine out of ten concerns in Clive Street have been built on enduring foundations ; they have splendid edifices ; and they are both beautiful and strong. I do not at all suggest that managing agents in Calcutta are angels or that the reformer will not find much to engage his attention here. But the structure of the jute mill industry and the intrinsic position of individual jute mills are proud object lessons, edifying examples. If this is the achievement of good managing agents, the reward they have earned is not the extinction of the system which they have brought into being and which they have worked with honour to themselves and profit to all. The worse type of managing agents suggests immediate reform ; but the better class of managing agents justify the retention of the reformed system.

In his pamphlet entitled "Inefficient Managing Agency System", Professor Sohrab R. Davar, who has devoted a lifetime to the study of the practical working of companies and the implications of Company Law in various countries, is himself prepared to concede that the managing agency system was, perhaps, the only practical method by which, under old conditions, new industries could have been planted and expanded in India. The whole question is whether the new conditions are such that you can dispense with this system *in toto* or you can find a substitute which will not be liable to like abuses. The new conditions, according to Professor Davar, have made investment easier ; "The investor to-day is quite capable of appreciating a new industry started under proper auspices and, in such cases, is ready to supply all the capital that may be necessary." He suggests that a little care on the part of investors and some investigation not only in the money market but with the help of an association like the Bombay Shareholders' Association should enable the investing public to know what is good and avoid what is bad. I am the last person to minimise the meritorious work which Professor Davar and his colleagues on the Bombay Shareholders' Association have done to educate the investing public in a better appreciation of their rights and in a more orderly formulation of their grievances. The Association have done such service that the investors in the entire country should be beholden to them. I wish more power to his elbow.

But in a farflung country like India, the investor can be said to be fully alive to all that he should know only when the press has a city staff who can deal with pro-

spectuses and balance-sheets and who can be relied on by investors as a safe and trusty guide. Meantime, the voice of the Bombay Shareholders' Association or of *Indian Finance* is only heard by a few. For the many, the guarantee of the genuineness of a company must continue to be the traditions of the managing agency firm. From this point of view, the present conditions do not mark any important change from those that prevailed in the days of the old company promoters.

Nor do I think that any substitute that can be suggested will be fool-prof or knave-proof. There is no managing agency system in Sweden ; but Sweden produced a Kreuger. There is no managing agency system in England ; but England knew more than one Hatry. America has no managing agency system ; but the shareholders in America have as many causes of grouse against those in authority as we in India have. What has caused the trouble and what has given rise to abuses is not the managing agency system but the system in which vested interests are able to exploit their power of possession and strengthen themselves and their near and dear ones in an impregnable position. Vested interests all over the world tend to concentrate and perpetuate power in their own hands. Without the managing agency system, power has been hereditary in other lands too. Mr. Roosevelt is tackling a like problem in America. If this is understood as the essential problem, the suggestions that the Bombay Shareholders Association have made for the reform of the managing agency system form a concrete basis for discussion not only for us but for those who are tackling the reform of Companies Law in other countries.

Curiously enough, I have to comment, this week, on the prospectus of a company which claims that "the prospect of a handsome dividend is rendered all the more certain because it has no managing agency." The Madras Sugars Limited, details of which will be found elsewhere in this issue, makes a special appeal to me for many reasons. Nearly fifteen years ago, I was negotiating with the Travancore Government for the setting up of a sugar refinery in the State ; fullest co-operation and sympathetic advice were offered me, on that occasion, by the Dewan, Dewan Bahadur T. Raghaviah, who, I now find, is the moving spirit of the Madras Sugars. The Travancore Sugars, which is now earning considerable profits under the management of Mr. N. S. T. Chari, owes its inception to the fervour and judgment of Mr. Raghaviah. He is at once level-headed and enthusiastic. It is no small asset and profit, for a company to be able to count Mr. Raghaviah as one of the responsible heads of its management. In the second place, the Madras Sugars intrigues me because I have always felt that the smaller type of sugar crushing and refining plant must now take the place of the larger factory units ; and that South India affords the most propitious conditions for this start. In fact, Mr. Ramakrishna, the versatile Director of Industries of Madras, has developed schemes for small-scale sugar plants, which should suit a middle class province like Madras. If Mr. Raghaviah makes a success of the Madras Sugars, he will be doing pioneering work and his will be the example which should reaffirm the faith of Mr. Ramakrishna in his scheme and which would be copied in other districts of South India. Thirdly, the combination of talent and prestige is unique in the directorate of the Madras Sugars. Two eminent businessmen, one big zemindar, one expert in agriculture, one retired Director of Industries and two distinguished retired officials—if this Board cannot inspire confidence as to efficiency of management and integrity of finance, I wonder what will.

The management is to be in the hands of two executive directors, one of whom is Mr. Raghaviah and the other is Mr. Tadulingam who was recently Principal of the Coimbatore Agricultural College and who has an intimate knowledge of the problems connected with the cultivation of sugarcane. Their remuneration is to be Rs. 200 per month. I know that, in the case of Mr. Raghaviah, it is 5 per cent. of the salary that he was drawing as the Dewan of Travancore. You cannot call this extravagant remuneration! What is even more striking is that the executive directors have decided not to draw even this moderate remuneration until the Company works at a profit. As I have pointed out, the cry of overproduction of sugar in India is only a false alarm. There is room for more sugar factories especially in South India where the cane grown is of a superior quality and the yields are heavy. The cane area selected by the Company is an excellent one with a network of rail and road communication. It is very near big consuming markets, there is no sugar factory within 150 miles of the proposed factory in any direction and all the cane needed for the factory can be drawn from within a radius of ten miles either by road or rail so that transport of the raw material is bound to be very cheap and will, at the same time, ensure the delivery of cane in a fresh condition. Investors have done well in the Mysore Sugars. I am sure, they will accord a rousing welcome to the Madras Sugars as the latter has a number of common points with the Mysore venture and may be described as its 'smaller edition.'

OLYMPUS

(From Our Correspondent)

New Delhi, February 12.

The Aga Khan has come and gone. His followers made it a point of advertizing that His Highness had come to consolidate Muslim ranks. Any way, whatever the purpose of the visit, it certainly created some misunderstanding. As usual, the Muslim Members of the Central Legislature were asked to give a welcome Dinner to the Aga Khan. Mr. Jinnah was approached and refused to be a host and, therefore, kept away from the function altogether. A few others among his followers did the same. Their view was that the function might be misunderstood as too communal in its outlook.

* * *

However, the majority of the Muslim Members did join it as hosts. The only point of controversy is as to whether Sir Abdur Rahim was right in joining the hosts. He is no longer "Muslim Member" of the House. He is the President of the House. Sir Abdur presided over a similar function two years ago and, perhaps, thought there was no harm in doing the same again. He certainly kept his lips sealed and did not make any observation on any controversial question.

* * *

Whatever the object of those who organized the Dinner, the speech made by His Highness has created a very favourable impression, especially as he courageously fixed his mind on a Hindu Divinity to indicate that the form expressed truly the historical and spiritual evolution of India and showed that unity lay in diversity. The speech was really one of the best I have heard from the Aga Khan and made a deep impression on the audience.

* * *

For the first time a Finance Member opened his lips and anticipated his budget picture. Sir James Grigg told the Assembly that he had every intention of presenting a balanced budget. Such a statement had to be made in defence of the decision of the Government to restore the salary cut. Sir James was as specific and categorical in his answers as he thought was the pledge of his predecessor putting the Services first above the taxpayer.

* * *

The discreet silence of the European Group on the occasion shows that some conciliation has taken place between them and the Government. I may say, in passing, that in the Assembly the only Party that does constitute Government's ideal of a constructive opposition, is the European Group and they are able to score a point or two and make Government consider public criticism as voiced by their constituents.

* * *

I do not suggest that in no matter is Government prepared to listen to the Indian Opposition. Yesterday, for instance, the Assembly carried two resolutions without opposition from Government. The first related to the prevention or control of rice imports from Siam and Indo-China, and, the other, referred to the removal of disqualification against Pandit Dwarka Parshad Misra of Jubbulpore and Chowdhury Ashrafuddin of Comilla.

* * *

The Assembly has now settled down to work after excitement of the first fortnight. The Whips have relaxed their grip over the Members who are now being allowed to "pair off." The President, too, curbed the Opposition by ruling out of order their adjournment motion to censure the Government for not terminating the Indo-British Pact. Sir Abdur Rahim told the Assembly that the constitution puts a limit on the powers of the House ; and, if Government was to be condemned for its failure to accept recommendations of the House, the process would become interminable.

This ruling pleased the Government who were, undoubtedly, feeling sore over the eleventh-hour change in the Opposition tactics which made the House vote jointly on the two parts of Mr. Jinnah's resolution on the J. P. C. The Law Member thought a solemn agreement had been broken. Any way, the Government wants to be more careful hereafter in coming to an understanding beforehand.

* * *

Another reason why the Assembly has now found its footing is that from this week the seating arrangement has been fixed finally for the Session. The new arrangement has thrown into the background both Mr. A. H. Ghuznavi and the Raja of Kollengode, who were telling the people in Calcutta a month ago that each of them was sponsor of a party of 16 and would lead it ! Apparently, the question of leadership remained the main bone of contention, with the result that no party has been formed. In fact, with the coming into their counsels of Sir Ghulam Hidayatullah, the contest became triangular. However, this development has not affected the Government as all the votes which this Party was expected to mobilize are, in any case, given to Government.

* * *

Mr. Jinnah, too, has been given a centre seat more befitting the role his little party plays in the Assembly. The Congress Party wanted the same number of Front Benches as are allotted to the Government ; and they have got it. But this arrangement has thrown Mr. Satyamurti further from his leader while Mr. Asaf Ali has moved forward and taken his seat behind Mr. Desai.

* * *

Social life, too, has begun to move. The Congress Members, who were abstaining from joining any social function where an Official was to be honoured, readily responded to the invitation for Dinner to the Aga Khan and to the At Home given to Sir Abdur Rahim by the Press Gallery Committee of the Assembly. The Press Gallery Committee was first inaugurated by President Patel. Sir Ibrahim Rahimtoola exactly followed the line adopted by his predecessor. Sir Shanmukham Chetty changed the constitution of the Committee and confined its Membership to the Press men in the Gallery and omitted Journalist Members of the Assembly from its rolls. The Committee, as constituted now, is the same that Sir Shanmukham created.

* * *

This function attended by about 50 people was the first to be organized by the Press Gallery Committee on its behalf. When Sir Shanmukham Chetty was made President, the Press greeted him at a Dinner given in his personal capacity by Mr. Durga Das, Secretary of the Committee. The Fourth Estate has certainly come to its own by the step it took in honouring the new President. And who will deny that the Press is becoming more and more interested in the work of the Central Legislature? Whereas, formerly there were hardly half a dozen active working men in the Gallery, they number easily two dozen nowadays. The extent of the interest roused by the new Assembly may be judged by the fact that, for the first time, the demand for seats in the Press Gallery exceeds the number of seats provided for the purpose.

* * *

I may end with a word about the coming Budget. It will not be a dull affair. Sir James Grigg is credited with having quite a thrilling story up his sleeves. He wants to make it bear the imprint of his personality and his financial genius. He knows he will stand or fall by his first performance.

OVER-PRODUCTION IN COTTON MILLS

(FROM OUR CORRESPONDENT)

Thursday, Feb. 14.

The question of restricting output is still exercising the attention of the textile industry in Bombay. The circular letter of the Millowners' Association has not elicited the degree of response that would justify concerted action. The support of at least 80 per cent. of the mills must be secured before the scheme for the abandonment of the double shift can be successfully launched. But so far only 50 per cent. of the mills, in their replies, have notified the Association that they are favourably impressed by the proposition. A few weeks ago I mentioned in these columns that strong and influential interests are opposed to the single shift system; and the opinion is held in many quarters that well-organised double-shift working of the mills is not incompatible with progressive development. But overproduction is so obviously risky that it is not unlikely that mills may be made to err in the side of caution. The opposition comes mainly from the "nationally" inclined mills. The owners of these mills aver that grounds for restricting the production of Indian cloth cannot exist, so long as the country is consuming large quantities of foreign cloth. The fallacy of such an argument is at once apparent. It is because the country still consumes large quantities of foreign cloth that unrestricted and rapid production of cloth in this country may lead to a glut in the market and a disastrous drop in prices. The consumption of foreign cloth, however deplorable, is a fact that must be taken into account.

It is possible, however, that other factors may force the hands of the millowners, particularly the scarcity of staple cotton and the consequent rise in the price of cotton generally. The high cost of raw materials is probably the most effective brake on hectic production; and even the mills with large cotton stocks are beginning to conserve their activities for fear lest the price of cotton in the future should make the working of the mills unremunerative. It is this factor, perhaps, more than the fear of over-production that has led six Bombay mills to close down night shift work in the mills in the course of the last fortnight.

In the meantime, the Government of India is engaged in looking into other ills inherent in the Indian cotton industry. The Indian Central Cotton Committee have issued their report for the year ended August 31, and they have drawn attention to the malpractices which have brought Indian cotton into disrepute. The chief malpractice is that of watering; and the Central Committee are convinced that "the only effective remedy for the various malpractices which were responsible for lowering the reputation of Indian Cotton" is an amendment of the Cotton Ginning and Pressing Factories Act. But there are also other malpractices. Careless ginning, admixtures and impurities in cotton, oil spots in cotton, are all complaints made against Indian cotton by consumers both in this country and abroad. The use of incorrect weights, that age-old form of perverted notions of profit, has also been heard of. In view of all the above, it is desirable that legislation should be passed to prevent these malpractices and to reclaim Indian cotton from suspicion and distrust.

The Report of the Central Committee above referred to makes the welcome announcement that the Bombay Government have approved of the establishment of a cotton market at Amalner and the question of another at Bijapur is receiving attention. The Gujerat Divisional Board of Agriculture has also passed a resolution requesting the Government of Bombay to establish regulated cotton markets at Surat and Broach. With regard to the standardisation of weights for cotton transactions, the Central Committee have suggested the adoption of the Railway *maund* of 82 2/7 lbs. and the Bombay *khandy* of 784 lbs. as the standard units.

The Report also makes the following suggestion with regard to the general cotton policy of India:

> "The events of the year have amply proved the unwisdom of continuing the production in India of large quantities of short-staple cotton, for which there is only a limited market at present, and of which the future is problematical in view of the increasing tendency of the world's mills to spin finer counts. The question of the possibility of growing medium and long-staple cottons in areas at present growing short-staple cotton is, therefore, one of considerable importance."

Bombay now possesses a new exchange known as the East India Chamber of Commerce Ltd. It was opened on Friday morning by Raja Bahadur Govindlal Pitti and is situated at Sheikh Menon Street. The object of the institution is to allow smaller traders to carry on exchange transactions in silver and gold in an organised manner in smaller quantities. The present Bullion Exchange has a fixed unit of 2,800 tolas for dealings in forward transactions in silver. This naturally results in the exclusion of traders with humbler means; and they are driven to carry on transactions outside with its attendant dangers and difficulties. The new Exchange will offer the facilities of organised and regulated transactions in gold and silver to the speculator of modest resources. One only hopes, with the Raja Bahadur, that it will not prove an incentive to reckless and excessive speculation.

Whenever the question of the appointment of a Chairman for the Bombay Port Trust comes up for decision, Indian commercial interests in Bombay and their spokesman in the Central Legislature urge the necessity of Indianisation of this important institution. But there is always a gap between official promises and protestations and official performance and despite repeated requests no Indian has yet been chosen to be placed at the head of the Bombay Port Trust.

The retirement of Mr. W. R. S. Sharpe, the present Chairman, is drawing near and the old controversy is raked up once more. Mr. J. K. Mehta, Secretary, Indian Merchants' Chamber, in a letter to the Government of Bombay, has drawn attention to the necessity of placing an Indian in the charge of the Port Trust affairs and gives a brief history of the reiterated demands that have been made in the past unfortunately to no avail. He recalls how the request was made in 1925 and again in 1926 when Mr. Sharpe's appointment as the Deputy Chairman foreshadowed his future appointment as Chairman. The request was repeated in 1930 and 1931 and although in 1930 the Government gave the familiar though hollow assurance that the matter would receive attention in 1931 they replied by appointing Mr. Sharpe as Chairman as they were "overwhelmed by points of view of personal suitability and of economy in establishment." The indefatigable Chamber took up the cudgels again in 1932 and sought to amend the Bombay Port Trust Act of 1879 with a view to secure an Indian majority on the Bombay Port Trust which would also incidentally involve a larger element of Indianisation in the personnel, including the post of the Chairman.

The request has also been made on the floor of the Central Legislature and in 1932 a resolution calling for Indianisation, moved by Sir Phiroze Sethna was adopted by the Council of State. And if one were to believe the preambles of state documents and the gushing professions of men in high authority one would think that the powers-that-be are consumed with a desire to Indianise the services in India.

And yet the control at the top in almost all the services is still in non-Indian hands and the latest decision of the Government to appoint an I.C.S. officer as the Chairman of the Bombay Port Trust on the retirement of Mr. Sharpe is naturally feared to be a continuation of the same old policy.

A copy of this Prospectus has been filed with the Assistant Registrar of Joint Stock Companies. Madras.

THE MADRAS SUGAR, LIMITED.

(INCORPORATED UNDER THE INDIAN COMPANIES ACT, 1913.)

AUTHORISED CAPITAL ... ... Rs. 6,00,000

PROSPECTUS

This Company has been formed for the purposes specified in the Memorandum of Association and more particularly for the production, manufacture and disposal of sugar, jaggery, improved jaggery and allied products and other food products generally and for the cultivation of sugarcane and other crops.

2. The Company proposes to operate on factory and non-factory bases in good cane-producing areas in the Districts of North Arcot, Chittoor, Chingleput, South Arcot and Tanjore in the Madras Presidency and produce and sell white sugar and jaggery of different varieties and other allied products.

3. To start with, it proposes to instal *inter alia* a modern sugar factory and refinery in the Palar Basin of the North Arcot District and produce 2,000 tons of white sugar every year. The area under cane in the said Basin is to-day about 4,000 acres. The Madras and Bangalore Railway line runs right through the Basin and connects it with such big trade centres as Vellore, Madras and Bangalore which are all within a hundred and fifty miles of it.

4. Over 50,000 tons of foreign sugar are still being imported into the Madras Presidency annually while the total production of white sugar in the Presidency is still far below its requirements. Freight and other conditions preclude any serious internal competition from Upper India. There will be no difficulty therefore in finding a ready sale for the 2,000 tons of sugar proposed to be produced by this Company.

5. In order to encourage white sugar industry in India, the Government of India passed the Sugar Protection Act of 1932 and imposed a duty (including surcharge) of Rs. 181-4-0 per ton of imported sugar. This gave a great impetus to the installation of sugar factories in the country, especially in Upper India, and resulted in an appreciable fall in the import of foreign sugar with consequent loss in the income accruing to Government from the import duty. With a view to recoup this loss and relieve the general tax-payer, the Government have now imposed an excise duty of Rs. 26-4-0 per ton on factory sugar produced in India. This has raised the cost of production of Indian factory sugar by Rs. 26-4-0 per ton, and the profits from sugar manufacture would doubtless fall correspondingly. It will be seen, however, from published figures that under the protection afforded by the Sugar Protection Act of 1932, sugar factories in India have been declaring dividends running up to 40%. It may therefore be confidently expected that, even after the imposition of the Excise Duty, the dividend which a well-managed sugar factory can pay to its shareholders would be very handsome, so long as the protection afforded by the Act of 1932 exists. Under the Act this protection continues until the year 1945. The prospect of a handsome dividend is rendered all the more certain in the case of the Madras Sugars, Ltd., because it has no Managing Agency and consequently there will be no loss to the shareholders in the shape of heavy managing commission. The Company's Directors are well-known businessmen and retired high officals and its management will be entrusted to two Executive Directors with a very moderate remuneration as per Clause X of the Memorandum of Association, *which the Executive Directors have decided not to draw until profits begin to accrue.*

6. Sugar manufacture is intimately connected with agriculture and the success of sugar factories depends mainly on the supply of cane for milling before the cane deteriorates The Company intends to make money advances to cane growers at easy rates of interest and thereby enable them to improve their yields of cane by better cultivation and manuring and also introduce early and late varieties so as to render it possible for the factory to extent its crushing season. If possible, the Company will also endeavour to grow its own cane under improved methods of cultivation in the neighbourhood of the factory.

7. The capital of six lakhs consisting of 2,000 Preference Shares of Rs. 100 each and 40,000 Ordinary Shares of Rs. 10 each which the Company seeks to raise, will be ample for (i) installing and working a modern sugar factory producing 2,000 tons of sugar annually, (ii) making advances to cultivators growing cane for the factory and (iii) raising its own cane in the neighbourhood of the factory, if conditions permit.

8. The MINIMUM SUBSCRIPTION on which the Directors may proceed to allotment is ten per cent. of the authorised capital. Nearly the whole of this amount has already been subscribed by the Directors and their friends.

9. The PRELIMINARY EXPENSES payable by the Company exclusive of brokerage, are estimated not to exceed Rs. 7,500.

10. BROKERAGE not exceeding two and half per cent. on the face value of the shares will be paid to BONA FIDE Brokers, Bankers, or authorised Agents, at the discretion of the Directors.

11. An AGREEMENT will be entered into between the Company and the firm of Messrs. Krishna & Co., whereby the Company will agree to sell Messrs. Krishna & Co., at wholesale market rates, the sugar, jaggery and all their products, and whereby the firm of Messrs. Krishna & Co., will agree to pay twenty-five per cent. of its nett profit to the Company.

12. NO SHARES have been allotted or proposed to be allotted otherwise than for cash.

13. The ARTICLES OF ASSOCIATION provide as follows:—

The qualification of every Director shall be the holding in his own name, on the date of his election or appointment as a Director, of shares (either Preferential or Ordinary) in

A copy of this Prospectus hes beon filed with tne Assistant Registrar of Joint Stock Companies, Madras.

THE MADRAS SUGAR, LIMITED.

(INCORPORATED UNDER THE INDIAN COMPANIES ACT, 1913.)

6. DEWAN BAHADUR S. RAGHAVA AIYANGAR AVERGL, Retired District and Sessions Judge, 'Rangasaranam,' Srirangam.

7. DEWAN BAHADUR A. APPADURAI PILLAI AVERGAL, M.A., I.S.O., M.L.C., Retired Director of Industries, Poonamalle High Road, Kilpauk, Madras.

the Company of the nominal value of Rs. 3,000.

Each Director shall be paid out of the funds of the Company, as remuneration for his services, such sum not exceeding Rs. 25 as determined by the Directors for every meeting of the Directors at which he shall be present in person, besides travelling and hotel expenses.

If any Director shall be appointed to advise the Directors as an expert or be called upon to perform extra services or go or reside abroad or make special exertions for any of the purposes of the Company, the Directors may pay to such Director such special remuneration as they think fit, which remuneration may be in the form of either salary, commission, or a lump sum and may either be in addition to or in substitution of the remunerations provided elsewhere in these Articles.

14. The RIGHT OF VOTING at General Meetings is one vote for every preference share and one vote for every ten ordinary shares.

15. The two Executive Directors are members of the firm of Messrs. Krishna & Co., and as such they are interested in the contract between the Company and the firm.

16. All the Directors are interested to the extent of the shares they hold and to the extent of the remuneration provided for them in the Articles of Association.

17. A copy of the Company's Memorandum of Association is included in the Prospectus and forms part of it.

18. Copy of the Memorandum and Articles of Association and of the above agreement can be inspected at any time during business hours at the Company's office.

19. Application for shares should be made upon the form accompanying the Prospectus and sent to the Registered Office of the Company, or the Company's Brokers, Bankers, or authorised Agents, together with the money payable on application.

20. The allotment of shares is entirely at the discretion of the Dirtctors. Where no allotment is made the deposit will be returned in full, and where the number of shares allotted is less than the number applied for, the balance of the deposit will be applied to the remaining payments. Failure to pay future instalments on shares allotted, when due, will render previous payments liable to forfeiture.

21. Share certificates will be issued within three months from the date when the share amount is fully paid up.

22. Prospectus and form of application can be obtained at the office of the Company and also from the Company's Bankers, Brokers, or authorised Agents.

Dated, the 1st October, 1934.

MORE ENHANCEMENT OF REVENUE

(FROM OUR CORRESPONDENT)

Madras, Feb. 11.

The Government are now engaged in giving an indirect but concrete reply to the popular demand for remission of land revenue. They are not apparently content with the answers they provided in the Government communique referred to last week. To take the war into the enemies' camp is in most circumstances the best strategy ; and it would now appear that, far from securing a remission of land revenue, most districts will have to busy themselves fighting an actual enhancement. Government know only too well that it is tactically uncomfortable to be on the defensive. Some time ago, it was South Canara, now it is Salem. The settlement enquiry is finished, and the Special Report of the settlement officer provided the Government with material on which to base their claims to enhanced revenue. Needless to say, the Government are inundated with representations from the ryots of the taluks which have been affected. Equally needless is it to say that the Government are not convinced of the validity of the claims put forward by the ryots. The Government "have carefully considered the representations," but "are unable to accept it." "It is evident," says the communique on the subject, "from the large number of representations received and their detailed nature that there is no force in the contentions raised." The memorialists have pleaded that as fresh councils will be brought into being next year under the new constitution, resettlement of the area should be postponed. The Government say that they have explained their position in this respect on more than one occasion in the Legislative Council. As the attempts at land revenue legislation have been unsuccessful, they are not prepared to take any further steps towards legislation on the settlement of land revenue. At any rate, the resettlement of a district cannot be postponed on grounds like these. For the object of resettlement is to ensure a fair distribution of the incidence of land revenue throughout the Presidency. And when other districts have been resettled, and as the settlement of the Southern taluks of the Salem District is now due, the Government consider that it should be carried out in accordance with the usual principles.

The Government do not accept the contention of the ryots that the condition of the ryot has not materially improved since the last settlement. And as in other cases, also there is the same difference of opinion between the Government and the people, as to the nature and the extent of the agricultural indebtedness that has grown up during these years, the difficulties experienced by the ryots in regard to the payment of the land revenue and the extent to which the prosperity of the ryots has been affected eitherway. The ryots contend that the new indebtedness has gone to a considerable extent towards the payment of land revenue ; that the fall in prices has been so severe as to offset in large part the increase in the productivity of the land and that on the whole, there has been no increase in the yield sufficient to justify anything like an enhancement of revenue.

The Government, on the other hand, claim that the statistics furnished for them by the special settlement officer go to prove that land revenue has been paid without any serious difficulty, that the productivity of the land has increased and that the ryots as a whole have grown more prosperous since the last settlement. They, therefore, argue that they cannot find any justification for the postponement of the introduction of the resettlement in the area under consideration. The only thing that they have been able to persuade themselves to do is to grant, "as a matter of grace," towards the area the same concessions in the matter of increment remissions which were allowed in the district of east Godavari, West Godavari and Kistna.

The reply of the Government to the memorial of the ryots of Salem proves, if additional proofs were needed, that what is wrong in our present system is not so much the particular rate assessed as the idea underlying the whole system. To urge that the increased prosperity of the ryots is a reason for the State coming in for a large share of the product of the land sows that it is high time that the whole system of land revenue were overhauled.

The ryots of Salem show a somewhat shrewd political insight in urging that the resettlement should be postponed in view of the fresh councils that will be introduced next year as part of the new constitution. They are more sanguine than most of us can be that any good can flow from the new constitution. But inasmuch as there will be a second chamber composed, presumably of the big land holders, it is not quite impossible that the pressure on the Government in respect of remission of land revenue might be more than it is now.

Agricultural distress has on the whole left the Government strangely unmoved. But in the Native States there is a demonstration of the truth that blood is thicker than water. In the Native States of Mysore and Travancore, the machinery of Government has been set on the move to devise measures of relief for the agricultural population. Committees, with not only sympathy for the agriculturists but also experience of their troubles, have laboured in recent times ; and at about the same time reports are issued in both these states. And it is not unreasonable to hope that before long Mysore and Travancore will have shown us the way as to how to proceed in regard to the problems affecting the welfare of the agriculturists.

In Travancore a Co-operative Enquiry Committee presided over by Mr. G. K. Devadhar very recently submitted a report which contains many important recommendations. It is understood that the Committee have recommended the establishment of Debt Conciliation Boards which will be charged with the double purpose of solving the problem of rural indebtedness and carrying on vigorous propaganda for encouraging tariff amongst rural population. This may be regarded as providing the basis for the better economic conditions amongst the people. But, according to the Committee, the really constructive work will lie in the provision of credit for agriculturists for better marketing facilities through the service of experienced marketing officers. The Committee specifically recommend the appointment of marketing officers, who will study the conditions in the market and also advise the producers in regard to the quality of their products. As regards credit, the proposals of the Committee are the Land Mortgage Bank is to be converted into a co-operative institution and branches of the same are recommended to be started throughout the State. No long term loans are to be given by ordinary societies and even the power of giving loans should be entrusted to Land Mortgage Banks. Increase in the number of societies, non-registration of communal societies, limiting members of preliminary societies to 200, development of non-credit societies, opening co-operative store for every high school and college, starting of societies for encouraging poultry-farming, dairy farming, and rural reconstruction are among other recommendations of the Committee.

The Central Co-operative Bank, according to the Committee, must be organised, and they recommend that a full time secretary should be appointed while the propaganda work should be done by non-official ladies and gentlemen, who will act as honarary organisers. The co-operative regulations as they

THE END OF DEFLATION

NO SANCTITY IN EXISTING PARITIES

THE NEW CONCEPT

BY PAUL EINZIG

The decision of France and other countries of the Gold Bloc to abandon their efforts to deflate further, marks the end of a phase in post-War financial history. What is even more important, it also indicates a change in the general conception regarding monetary policy. For the first time in modern financial history, deliberate policy of deflation has attained a stage where it reduced itself *ad absurdum*. To all but the fanatic adherents of monetary orthodoxy, it is now evident that deflation has limits, beyond which it cannot continue, for the simple reason that it sets in motion influences which tend to reverse the process. It is a matter of common sense that it is arithmetically impossible to deflate indefinitely ; and yet in the absence of practical experience this obvious fact was not adequately realised until recently. The example of France has proved conclusively, however, that continuous deflation inevitably results in a chronic budgetary deficit, owing to the rigidity of the burden of the public debt. The currency of a country that has a chronic budgetary deficit is bound to be vulnerable, no matter how strong its technical position may be.

The realisation through practical experience of the existence of arithmetical limits to deflation is of the utmost importance from the point of view of the shaping of future monetary policies. In the past, every Government and every Central Bank considered it their sacred duty to defend their currencies at their parities irrespective of the sacrifices involved. They regarded it as their sacred duty to deflate indefinitely if necessary in order to be able to maintain their existing parities. The monetary system of the world was chained to gold and was at the mercy of the behaviour of the yellow metal. If there was an acute shortage of gold—such as was experienced during the period of post-war stabilisation—and if in consequence, commodity prices fell, we had to submit to it without a murmur. The mere idea that any country should depart from gold or should alter its mint parity owing to the grave inconvenience caused by the behaviour of gold was considered extremely immoral and dishonest. It was regarded as the moral duty of every country that valued its commercial integrity to defend its gold parities to the utmost rather than yield to adverse pressure. It is not enough if they exhaust all their gold resources in defence of their currencies. The fact that Great Britain used up foreign credits equivalent to the amount of her gold reserve before she suspended the gold standard did not save her from the attacks of orthodox critics. She was expected to do a good deal more. She was expected to penalise her depressed trade by a higher bank rate ; to drive a number of perfectly sound firms into bankruptcy by credit restriction, to compel workmen, if necessary, at the point of machine guns, to accept lower wages. In the view of orthodox economists, it would have been the duty of the British Government of 1931 to defend the sacrosanct parity of 84s. 11½d. per ounce of fine gold even at the cost of wholesale ruin and bloodshed.

Recent experience has shown that, even if the Government is prepared to deflate ruthlessly, there is a limit beyond which it cannot go on. It is impossible to have your cake and eat it at the same time. It is, doubtless, possible to reduce commodity prices at the cost of bankrupting a large number of industrial and commercial firms ; but it is impossible to make the industrial and commercial firms continue to pay the same amount of taxes as before. It is possible to deprive millions of people of their employment, but it is impossible to compel them to spend as much as they did before so as to enable the Treasury to collect the same amount of revenue. Neither bank rate nor machine gun can defy the rules of simple arithmetic. If deflation cuts down revenue and expenditure cannot be cut down to a corresponding degree owing to the rigidity of the burden of the public debt, then the chronic deficit, which arises, will tend to set in motion reflationary influences which sooner or later reverse the process of deflation. Thus, even if a Government is prepared to sacrifice everything for the sake of the so-called sound currency, the chances are that sooner or later the currency will have to yield to adverse pressure.

The realisation of the existence of natural limits to deflation will, doubtless, make Governments hesitate in future to sacrifice too much for the sake of maintaining the existing parities. They may think twice before inflicting the sufferings of ruthless deflatitn upon their people if they are aware that these sacrifices may prove to have been wasted. It is probable that in future, if the monetary authorities are confronted with a persistent deflationary trend, they will be more inclined to take the line of least resistance by abandoning their parities than they were in the past. It is possible and even probable that the whole conception of the world towards the monetary problem will undergo a change. The maintenance of parities will no longer be considered a sacred moral duty, but a matter of expediency. The parities will be maintained so long as their maintenance does not involve grave inconvenience, and so long as the inconvenience it involves is outweighed by the practical advantages obtained through the stability of the monetary unit in relation to gold. They will be abandoned, the moment it is realised that, from a practical point of view, these advantages are more than outweighed by the sacrifices required for maintaining the existing parities.

It is on such a conception that the new gold standard should be based. There is no harm in returning to the gold standard, on parities which are reasonably low, so long as we do so on the understanding that, the moment it is considered too costly to maintain the parities they would be abandoned once more. The danger of stabilising currencies lies in the fact that, once they are stabilised, the monetary authorities are inclined to defend the new parities, regardless of the sacrifices involved. Once this attitude is changed, it will be possible to enjoy the

advantages of the gold standard without having to put up with the worst of its disadvantages.

From a moral point of view, no objection can be raised to the new conception of the gold standard. If it is made plain in the stabilisation laws that, although the monetary authorities are under obligation to convert the notes into gold at a fixed parity, this parity only holds good until further notice, the moral aspects of maintaining parities do not arise. Since the Governments do not promise unconditionally to convert the notes forever at a fixed parity, they will not be placed in a position where they are compelled by force of circumstances to break their solemn undertaking. Nor are they placed in the dilemma of having either to break their promise or try to avoid doing so, for a while at any rate, at the cost of sacrifices which are entirely out of proportion to the result.

From a practical point of view, such a qualified gold standard presents no serious disadvantages. It would not undermine confidence in the stability of the currency. No responsible Government would think of going off the gold standard or changing the parities on account of temporary and narrow movements of commodity prices. It is only if they were confronted with a fundamental trend of considerable magnitude that they would avail themselves of their right to abandon the existing parities. It is conceivable that no actual change would be made for decades. If and when the change becomes necessary, it is to the advantage of everybody concerned if the parities are abandoned without first having to undergo a desperate deflationary struggle to maintain them.

It is not unreasonable to hope that the trend of evolution points towards the adoption of such a modified gold standard. The unwillingness of President Roosevelt to relinquish his right to change the parity of the dollar seems to indicate that he realises the importance of having a relatively free hand in regard to the parity. It would, indeed, be an ideal solution that within certain limits the Executive should possess the right to change the parities by decree, subject, of course, to the subsequent approval of Parliament. One of the reasons why the Governments of the countries of the Gold Bloc are so reluctant to devalue their currencies is that they would have to obtain the consent of their Parliament (in the case of Switzerland also the consent of the electorate through a referendum) which is no easy matter. The chances are that, once the act is accomplished, Parliament and public opinion accepts it with relief, even though it would be opposed to it if it had been consulted beforehand.

If, as a result of the crisis, the world succeeds in getting rid of its deflationary mentality and adopts a more elastic conception of the gold standard, this would amply compensate mankind for the sufferings of the last four years.

WILL FIVE POWER PACT HELP STABILISATION ?

CITY CIRCLES HOPEFUL

LLOYD GEORGE IN NEW CABINET

By Francis Williams
City Editor, The Daily Herald, London.
By Air Mail.

The Anglo-French agreement giving Germany and other European Powers a plan for a pact of mutual assistance in the event of aerial attack, is generally regarded in the City as likely to result in an improvement in international and financial trading relationships.

Political fears have been at the root of many policies of national self-sufficiency and if the Anglo-French agreement should receive a favourable reception in Germany and elsewhere, it is hoped that it may lead to a revival of international confidence which will, in its turn, bring about a greater willingness to reduce trading barriers.

A better political spirit on the Continent should certainly reduce fluctuations in exchange rates; for many of those fluctuations recently have been due more directly to political, than to financial, anxieties.

This, in its turn, by creating a more normal condition in the exchange markets, should pave the way for an examination of the question of an exchange stabilisation agreement. The difficulty in the way of any stabilisation has been that fluctuations due to the movement of international funds in consequence of political and other anxieties have obscured the real relationships of the currencies and have, therefore, made it difficult to determine at what rate stabilisation should be considered.

Although, therefore, discussions between M. Flandin, the French Premier, and Mr. Neville Chanberlain, the British Chancellor, on stabilisation have had no definite result, I understand that their talk closed on the understanding that the matter should be taken up at a later date, possibly in a few months' time, when the effect of the Anglo-French political agreement would be more clear and when also it might be possible to judge more accurately how far the present rise in the American price level is likely to continue.

Meanwhile, the general banking view is that over the next few months the £ will decline in value.

This is based on the fact that it is now practically certain that Britain's adverse balance of international payments was larger last year than in 1933 and that this tendency is likely to continue during the present year.

The Treasury and the Bank of England have, I understand, agreed that, although the Exchange Equalisation Fund will operate as before to even out fluctuations, no action will be taken to prevent a long term decline in the external value of the £ due to this cause.

Internally, big political developments, which will have sooner or later repercussions of considerable economic and financial importance, are probable. An early reconstruction of the Cabinet is almost certain. And I have it on good information that a strong feeler has been sent out to Mr. Lloyd George to ask him whether he would consider serving in such a reconstruction Cabinet.

He has not yet made a decision which will depend to some extent upon the actual office he is offered. The fact that he should have been approached is, however, an indication of the Government's nervousness regarding his demand for a more active policy on public works and unemployment reduction.

As I pointed out in a previous article, his declaration of policy was much more favourably greeted in Government circles than in Labour Party circles, although originally the reverse was expected.

Whether Mr. Lloyd George joins the Government or not—and the betting odds are slightly that he will—reorganisation of the Cabinet will take place and will be followed by a more definite policy to increase internal trade.

This is likely to have a good effect upon industrial shares, particularly in the constructional industries.

OVERSEAS' NEWS: By Air Mail

GREAT BRITAIN

THE REST OF THE "BIG FIVE"

A fresh crop of speeches completes the orations of the Chairmen of the Big Five ; and these must claim pride of place in this week's Overseas' News. This year the bankers were, if anything, a little more subdued in their optimism than last year, showing that recovery has not been uniformly rapid throughout the year. And while last year all the Chairman with the exception of Mr. Mckenna, were inclined to criticise and deplore the experiments of Mr. Roosevelt in the economic and monetary sphere, this year they are strangely reticent about America. Only Mr. Mckenna has voiced his faith in "walled-in economy" and the possibilities of a further expansion of the home market. The speeches have one common feature, however. All the bankers have roundly criticised the hasty opinions frequently expressed on public platforms regarding bankers and banking.

Westminster Bank.

The Hon. Rupert E. Beckett dwelt in the beginning on the items of the balance sheet and summarised briefly the features of the banking year. These were a slight decline in the volume of bank deposits, the absence of an expansion in the demand for advances, a reduction in the volume of bills discounted and the necessary increase in investments. With very slight changes this represents the average experience of all bankers during the past year.

The second part of Mr. Beckett's speech, in which he dwelt on the economic situation, is of greater interest. Mr. Beckett rightly holds the view that only in freeing international trade lies the hope of lasting world recovery. He has made some very apt observations regarding the policy of economic nationalism which the high priests of tariffs and quotas would do well to heed. "Recent international agreements aimed at fostering particular industries which, while no doubt favourable to the countries and industries concerned, have the effect of canalising trade within new and unexpected channels ; barter agreements have much the same result and, incidentally, help still further to reduce the volume of commercial bills of exchange." Then again, "a policy of isolation seems to me a futile aspiration for a world-wide Empire like ours with frontiers conterminous to other countries in amost every part of the globe."

Mr. Beckett, however, is at a loss to discover how, in view of the present chaotic conditions of trade and currencies, tariff walls are to be removed or the currencies stabilised. He is definitely of opinion that the time is not ripe for stabilisation. "Under such conditions as these, and having regard to the uncertainties attached to other principal currencies, to attempt to stabilise now would appear to me to be dropping our currency anchor on shifting sands, only to have it swept away again." He is constrained, therefore, to come to the conclusion that "the present must be, by reason of world conditions, largely a period of marking time in the international sphere."

Mr. Beckett concludes his speech by referring to the attacks which have been made recently on the joint-stock banks. But all will agree that the efficiency and integrity of the banking system in Great Britain is above reproach.

National Provincial Bank

Mr. Colin F. Campbell in his speech at the annual meeting of the national Provincial Bank, struck a more optimistic note than Mr. Beckett although he did not share the sparkling optimism of Mr. Mckenna. Mr. Campbell thinks that his hope, expressed a year ago, that the second century of the Bank had opened under auspices obscured by difficulties but brightened by greater confidence at home, has been fully justified by the events of 1934. He infers the growth of activity in the home market and of the purchasing power of consumers from the expansion in the bankers' clearing returns and from the remarkable expansion at Christmas time in the Bank of England's note circulation.

But Mr. Campbell does not allow his optimism to obscure his conviction that only in the expansion of international trade lie the seeds of world recovery. His reading of the international situation is gloomy and his faith in "directed economy" begins to flag while reviewing the situation in other countries.

These measures are interesting as a further illustration of the limitations of those who try to organise trade by official authority, instead of leaving it free to follow its own lines of development. Dictated economy finds that it cannot dictate beyond the borders of the country in which it is set up, and for navigating the shifting currents of world trade the elasticity of private enterprise has so far shown itself to be the surest guide.

The business of this country, built up on a basis of export activity and international trade and financing, cannot expect a full return to prosperity under present conditions. Trade barriers imposed by every nation and the almost complete cessation of international movements of capital inflict a condition of paralysis upon important parts of our economic machinery. The history of the pre-war period shows clearly how closely the activity of our export industries was connected with the oversea movement of our capital ; and it is too often overlooked that the cessation of this movement is a cause of depression and unemployment. Solvent borrowers abroad are so difficult to find in these times that restrictions on foreign lending seem almost unnecessary ; but, though some restrictions may be required in the interests of the stability of sterling, it is to be hoped that at least some relaxation of these restrictions may be permitted before long in the case of such suitable borrowers as may be forthcoming.

As to the possibility of the restoration of a common international standard, we shall have to wait, apparently, until a change in price levels brings the franc and the dollar into harmony. At present the pound, balanced between them, retains its power to move in either direction, a power that it would lose by stabilisation. For this reason it is essential that stabilisation should only be decided on under conditions that rule out all reasonable chances for regretting it.

His remedy for the present ills is a recourse to larger international lendings ; but he shares the opinion with the other bankers that the present is not an auspicious time for any attempt at stabilisation.

Under the circumstances a vigorous housing scheme and other public works activities on the part of the Government are, in his opinion, but calculated to further the well-being and prosperity of Great Britain.

Lloyds Bank.

Mr. Beaumont Pease of the Lloyds Bank contented himself with a vigorous defence of the banking system and bank management in Great Britain in view of the criticism of those who have recently attacked the policy of bankers and advocated state control for banking. It is more than likely that the cry for nationalisation of banks and industries is but one of the many new-fangled slogans that make their appearance before a general election ; and Mr. Pease showed by an analysis of deposits that, if it came to a question of votes, nearly 14 million satisfied depositors would stand by the present system, which has worked so satisfactorily in the past. Mr. Pease essayed a short recital of the mysteries of banking in order to create the impression that most of the criticism levelled against the present system is either uniformed or malicious. He referred to the case of Australia where the movement for nationalisation of banks and industries was happily

Air Mail Week.

defeated at the polls. He also put up a defence for the Bank of England which is unfortunately made the butt of the charges against banking in Great Britain.

It is a pity that Mr. Pease's advocacy for the joint stock banks should leave him so little time for a survey of the international situation. It is only at the very end that he gives a hurried review of the difficulties of international trade.

"My business is in practical every-day affairs, and every day I see in my daily work obvious reasons for our poor condition. Why cannot we pay our debts to America? Because she will not take our goods in payment. Why was Australia unable to send her barley to Belgium? Because she refused to accept Belgian glass. Why could not we sell our coal to Italy, and why were thousands of our miners idle in consequence? Because we would not buy Italian marble. Why cannot Manchester sell her goods to South America? Because exchange restrictions in that country prevent the dispatch of the purchase price. I could multiply such instances indefinitely. If our well-being depends on trade, and if trade is the exchange of goods between man and man and between nation and nation, these obvious obstacles must be removed if trade is again to flow freely. Surely it is not necessary to look for "some great thing" or to babble of the distant virtues of Abanas and Pharpars in the form of experiments with currency, or the nationalisation of banks, when some cure at any rate for the world's economic leprosy is so obviously at our doors."

But while he is alive to the dangers of economic nationalism not everyone will agree with him that Great Britain in this respect is the smallest offender.

"We in this country have endeavoured to combat evil. We have shown a spirit of give and take ; we have made a number of trade treaties with nearly a score of nations, and even our adoption of some measures of Protection, illogical as it might seem, have, I believe, helped to open the eyes of the world to the fact that excessive nationalism is an enemy to peace both political and economic. Peace in both these spheres is what to my mind the world so greatly needs. Let us continue to do all that we can to seek and ensue it."

The protagonists of tariffs and quotas in England would take it as a doubtful compliment to be told that they are outdone by other countries in the rigidity of their methods. In an era of economic suicides, Great Britain obviously desires to pass for one of the most desperate.

FRANCE

FOREIGN TRADE IN 1934

Complete figures are now available as regards the foreign trade of France during the year that has ended and the statistics form very interesting reading. The policy of restriction on trade movements by means of quota regulations and tariff barriers, which were the regular features of the French foreign trade during the last year, has exerted its full effect. The import and export trade of the country stand compared with the figures for the past six years as follows :

(In millions of francs)

	Imports	Exports	Import surplus
1929 ...	58,220	50,139	8,081
1930 ...	52,510	42,835	9,675
1931 ...	42,205	30,438	11,767
1932 ...	29,808	19,705	10,103
1933 ...	28,431	18,474	9,957
1934 ...	23,061	17,822	5,239

It will be noted from the above table that the year that has ended is notable for a record fall in the total volume of both imports and exports. There has been a progressive shrinkage of the external trade of the country for the past six years and the steady decline has reached the record low level last year. Imports have fallen by 60 per cent. during the six years and exports by about 64 per cent. during the same period, though in the last three years the shrinkage in exports is much less severe that that in imports. Much the same percentage is noticeable, even if the figures are taken separately according to the class of materials. Classifying the trade figures according to the commodities, foodstuffs, raw materials and manufactures, the following table shows the position :—

IMPORTS

(In million of francs)

	1929	1934	Percentage
Foodstuffs ...	13,167	7,451	43
Raw Materials ...	35,125	11,373	67
Manufactures ...	9,928	4,237	57
EXPORTS			
Foodstuffs ...	6,077	2,566	58
Raw Materials ...	12,568	5,149	59
Manufactures ...	31,494	10,107	69

It is thus evident that the fall has affected all classes of materials. In the years 1931 and 32 there was a heavy import surplus ; and this has evidently scared the French politicians and economists to adopt a rigorous policy of reducing this surplus. There have been quota agreements with regard to many of her staple commodities. There have been high tariff barriers against many commodities from other countries. There has been very vigorous bargaining especially with the United Kingdom for reciprocal concessions. There have been retaliative measures against French commodities in other countries. To add to these essentially restrictive influences on the free movement of trade there have been the chronic budget deficits and the policy of deflation that the successive governments have followed with wonderful consistency. There have been political disturbances, acting as another hindrance to the free movement of trade. The stringency in the money market and the inelasticity of the credit supplies have only tended to increase the difficulties of foreign trade. Many concerns had to go into liquidation ; and the total turnover in trade cannot make one jubilant. All these features are revealed in the comparative statements of trade figures given above. Here and there, there have, of course, been concessions obtained and the policy of quotas has been relaxed ; but it can be said in general that protection

on the one side and counter-protection on the other, remain even to-day at the level of maximum application.

Another feature is also noticeable. The trade movement has been very limited since the stabilisation of the franc. There has been a very wide divergence between the internal price levels and those prevailing abroad, with the result that export of French merchandise, which had all other advantages, laboured under a heavy handicap. Even now the gulf between the price levels has not been narrowed ; and this fact, supported by the trade figures, has given a new fillip to those who would advocate a devaluation of the franc. Even during the latter part of the last year, in the course of the budget speeches in the Chamber, Mr. Raynaud was bold enough to point out the necessity for a revaluation of the currency. The question has again been revived, though the authorities are still disinclined to swerve from the path of conservatism. During the current week a fresh demand has been made for devaluation by M. Raynaud. He boldly declared that the franc was overvalued and said that the Government's new policy was dangerous, especially in regard to its decision to call upon the Bank of France to rediscount the Treasury Bills. He would suggest one of the three alternatives for solving the national depression. He would seek an agreement with Great Britain and the United States of America on the possible stabilisation basis for levelling sterling and dollar with the gold bloc currencies. Or he would allow the franc to drift until it finds its own equilibrium. The third alternative is to fix a new value for the franc. Though the question of devaluation is quite old and though the difficulties of maintaining the franc are becoming increasingly dear, the French authorities have not taken any bold step in that direction. But prominence is given to this matter in financial circles especially in view of the forthcoming visit of the French delegation to England to confer with the British authorities. Nothing has yet been announced as to what will be discussed during the coming talks ; but rumour has it that financial matters will not be left out. If one is to judge from the conference which the Prime Minister had with M. Tannery, the Governor of the Bank of France, and M. Baumgartner, Director-General of the Department of the Movement of Public Funds, one can guess that M. Flandin is equipping himself with all possible information for any discussion that might take place in London, and this leads to the thought that we are making some progress towards stabilisation.

GERMANY

THE RAYON INDUSTRY

By a judicious regulation of output and competition many of the German industries have made rapid progress during the last one year. An examination of Germany's foreign trade figures will show that during 1934, the balance of account has become very unfavourable. Normally she enjoys an export surplus ; but with the growing passive balance, which first manifested itself in January 1934, Germany had to take immediate steps to control imports and promote exports. The various regulations regarding the issue of exchange certificates and the conclusion of the trade agreements with foreign countries were all intended to achieve this aim, *viz.*, to control imports and encourage exports. At the same time, the vast schemes of public works for affording relief for unemployment had resulted in an increased demand for many of the commodities ; and this has facilitated the internal expansion of the industry. In many branches of the building industry like cement, for instance, there has been an increased home consumption. There has also been a general rise in the consumption of other articles due to the increased capacity of the people to spend. These are some of the chief features of the German industries ; and the rayon industry in common with others, reveals these tendencies.

For the first time since the beginning of the reduction of German rayon output in 1931, production in 1934 is estimated to have increased to about 40 million kilos. This represents an increase of 18 per cent. over last year's figures ; and the rise is attributed to the increased domestic demands for rayon as a result of the growing shortage of other textiles. The German producers are also working to full capacity ; and many are contemplating an extension to their plants. The Government has done much to put the German rayon producers in a favourable position and it has come to feel proud of the result.

Chief among the measures taken by the Government to safeguard the industry from foreign competition is the decree empowering the German members of the German Rayon Syndicate to withdraw its membership without notice. This syndicate was established in 1931, for ten years with Dutch, Italian, French, and Belgian producers for the regulation of the sales of rayon in the German market without unduly depressing the prices. Since the end of 1933, separate agreements have been concluded by the German government with the respective foreign governments on the basis of a quota of 75 per cent. of the 1931 level. By empowering the German members to withdraw from the Syndicate, the German Government has sought to strengthen the position of the producers for the reorganisation of this syndicate. When the imports have been curtailed to 75 per cent., this was found to be an acceptable compromise, for the foreign producers have secured some kind of title to import Rayon into the German market without being handicapped by foreign exchange restrictions ; with the result that neither they nor the German producers are now willing to withdraw from the Syndicate. This has thus grown to be much stronger than ever.

As a result of these measures, the German producers have increased their quota in covering the German consumption of rayon from 50 per cent. at the end of 1933 to 80 to 85 per cent. Thus foreign producers, who were members of the Rayon Syndicate, could not benefit from the increase of consumption in Germany.

U. S. A.

THE SUPREME COURT & GOLD CLAUSE

To the weekly Chronicler of American trade and finance, more than even the great captains of industry or the giant operators on the exchanges, the delay in the decision of the Gold Clause cases is a grievance of the first magnitude. There is a regular hold-up of American business ; and hardly anything of interest transpires. The markets are holding their breath in suspense ; and neither in Washington nor Wall Street are people prepared to take a definite view of the future and act thereon. It is indeed, a great pity, as the Government, and the markets alike, are well prepared for another powerful plunge ahead. So far as the Administration are concerned, they have regained confidence that the policies underlying the N.R.A. are fundamentally sound. As for business, there has been during the last fortnight and more a succession of good news, which, like Democles of the old fable, businessmen are unable to taste. The simile is more apt than one would think at first sight. For there are the temptations of good business deals which can be put through on the strength of the favourable reports of recent times. But over the heads of businessmen and Government alike hangs the better known Democles' sword of the Supreme Court decision.

One would think that a situation like this should spur the Court to hasten the announcement of its verdict. But, strange as it may seem, it is precisely this reason that impels the Courts to ponder long over the issues involed before they deliver their decision. It is believed that there is some difference of opinion among the judges constituting the Supreme Court and that the majority are trying their best to win over the dissenters so that the verdict would be unanimous. But it is by no means clear which side is favoured by the majority. Arguing hypothetically, it is difficult to understand how the Supreme Court could delay a decision in favour of the Administration. For such a decision would not raise any embarrassing questions of public policy, though conceivably, it might create difficulties for the Supreme Court in respect of reconciling the existing law with the requirements of the public welfare as conceived by the Administration. It is obvious that the view taken is that deference to the requirements of public welfare on the part of Congress and legislation in accordance with such requirements interfering with the rights specifically guaranteed to individuals will not be strictly legal, unless the Court interprets the General Welfare Clause as conferring such right of legislation on Congress. If the Court were prepared to take the latter view, they should have little hesitation in affirming their faith in such interpretation, announcing their verdict accordingly on the cases before them.

The delay, therefore, arouses the suspicion that the Supreme Court is led in its interpretation of the law to the position that the Constitution does not confer on Congress the power to interfere with the right of individuals under bonds entered into between such individuals and the Administration. It is only then that the Court has to consider the more fundamental question of whether the Supreme Court was intended by the framers of the Constitution to interpret the law too literally or to act as the guardian of the rights of the States when they are threatened by the encroachment of the legislative authorities working under the Constitution. This question would be widely juristic and not narrowly legal. This may, conceivably, mean protracted discussions among the judges constituting the Supreme Court and a battle royal between the champions of the juristic and the legal viewpoints.

There is implicit in this reasoning the view that delay is inexplicable except on the supposition that the Court, generally speaking, are inclined to give a decision adverse to the Administration. But it is also possible that the judges are not considering a uniform decision in all the cases. That is to say, they might well make a distinction between the Gold Clause in contracts between private parties and the Gold Clause in bonds to which the Government of the United States is a party. They might hold the view that, while the Federal Government have the power to legislate on what should be considered the legal tender of the country, they will not be entitled to change the terms of a contract to which they themselves are a party. This distinction between the rights of Government bond-holders and the rights of holders of bonds from private parties is easily understandable. It might also have some sanction in existing law ; but it will be easily appreciated that the consequences of invalidating the abrogation of the Gold Clause in public bonds and upholding its abrogation in private bonds will not minimise the gravity of the problem for the Administration. Mr. Roosevelt may have the satisfaction that, so far as private indebtedness is concerned, his valuable work of reducing its weight by a change in the value of the dollar will remain intact. But the Federal budget would be even more seriously unbalanced than it is now. And, obviously, it is one thing for the Government to go in deliberately for a deficit in what they consider to be the interests of the nation as a whole. It is quite another to have such a deficit increased by an extraneous agency which cannot, in the nature of things, be expected to appraise either its extent or its significance. There is above all the question of prestige. It is, no doubt, true that an adverse decision by a judicial body is not like a vote of confidence in the Legislature. Nevertheless, such a decision by the Supreme Court might well be followed by a general desire on the part of every malcontent in the American economic system to rush to the Courts over every point of dispute with the Administration. It is believed that the Court will deliver its verdict only just before the coming recess. The evils of the written Constitution are never more keenly felt by the people nor bitterly resented by the Administration than at the present time It is to be hoped that the Supreme Court will explore the way of preserving the work of the last two years without, at the same time, shaking the confidence of the people in its judicial impartiality.

PUBLICATIONS OF THE LEAGUE OF NATIONS

JUST OUT; "STATISTICAL YEAR-BOOK OF THE LEAGUE OF NATIONS" 1933-34

270 pages ... ... in wrappers Rs. 6 14 0
in cloth Rs. 8 8 0

This is the most complete and authoritative international compilation of official statistics regarding the economic, financial and social activities and the population of all the countries of the world.

These statistics including Vital Statistics, Labour Conditions, Production, International Trade and Balances of Payments, Transport, Public Finance, Monetary and Banking Statistics, Prices, Conversion coefficients for weights, measures and currencies, have been brought up to the end of 1933 or the beginning of 1934 and have been reduced, whenever desirable, to a common measure.

The present edition marks an improvement on its predecessor in the abundance of its information on various matters of great topical interest, such as public finance and the distribution of population by age, groups and occupations, etc. Another new feature consists of the tables on the production and use of nitrogen and of index-numbers of employment.

"REVIEW OF WORLD TRADE", 1933

A presentation and analysis of world trade in 1933 — about 60 pages ... ... Price Rs. 1 12 0

This volume compares the trade of the world of continental groups and of individual countries in 1933 and in recent years. It shows the contribution of each country to the total, the changes in the direction of trade and in the relative importance of the groups of commodities of which it is composed. The analysis demonstrates that, while the value of trade diminished again in 1933, the quantum increased, mainly owing to the larger exports of raw materials; exports of manufactured products were, however, also slightly higher than in 1932. Special attention is devoted to the trade in the most important crude materials and foodstuffs. An annex contains revised indices of the prices and quantum of the trade of individual countries.

JUTE AND JUTE GOODS

JUTE

Calcutta, February 14.

The market ruled dull and inactive during the week under review. Imports in the up country markets are reported to be very small, but there is very little active interest being taken by shippers in Calcutta. Mills are taking moderate interest for Picked Districts and are awaiting developments with regard to the restriction scheme of the Government of Bengal, the result of which will not be known before sowings are well under way.

The futures market has remained featureless during the week though prices have undergone appreciable fall under pressure of sales.

Ready Firsts are quoted at Rs. 31 and a fair amount of business has taken place in the London market. The uncertainties about the gold clause decision in America is having an unsettling effect on the prices in Calcutta though the undertone towards the close of the week is steady. It is hoped that after the gold clause decision is announced, the market will take a turn for the better.

JUTE MANUFACTURES

Calcutta, February, 14.

The hessians market has ruled steady but quiet during the week under review, and prices on balance are lower than what they were during the previous week. The highest and lowest quotations for Ready nine porters were Rs. 9-8-0 and Rs. 9-6-0 per 100 yds. There has not been much enquiry from the overseas markets, but the local speculators are very steady in their ideas. The trend of the market, however, is not much in their favour and it seems quite probable that in the course of the coming weeks the price might decline further. Mills have not come out to sell in anticipation of higher prices. In case the market does not go up they will have to sell the unsold portion for the near deliveries. There has been a general weakness in the outside markets and therefore hessians also is very likely to remain so in sympathy with them.

Heavy goods market was not so easy as that of hessians, but the strength was more visible in prices than in the actual turnover of business. In view of the approaching busy season for heavy goods holders are not in a mood to discount prices and like to hold on for better prices.

A special cable dated February 14, New York, states:—

Gold case impossible forecast. Stock of hessian end January Spot 116 millions yards, afloat 109 millions against 122 and 106 million yards last month. Consumption January 470 million yards against 370 million yards December 1934 and 410 million yards January 1934.

Total reported sales for the week ending, Saturday, the 9th February, 1935.

COTTON AND COTTON GOODS

COTTON.

Calcutta, February 14.

A quiet and steady tone was the feature of the cotton market over the week end, with prices fluctuating over a narrow range. April-May Broach contract went through between Rs. 247 and Rs. 252 per candy.

Reports from Bombay state that a bullish activity which was prevalent early last week subsided at the week end when rates firmed up by over two rupees. With the exception of a few liquidating operations the market was quiet. Following a rise of 6 to 11 points in the New York market, mainly due to better trade demand, Broach April-May opened at Bombay at Rs. 252 against the earlier quotation of Rs. 254-4. Liverpool opening was three points easier, hardening to a point up at the end of the week.

It is reported that the United States Agriculture Secretary is seeking through British a reduction of the Indian import duty on cotton and in the event of failure he has an attractive scheme for subsiding the export of a million bales to the Far East and India.

COTTON PIECEGOODS

Calcutta February 14.

The inactivity of the local market continues in spite of the advent of the Hindu marriage season when a considerable amount of business is transacted. Both Lancashire and Indian products evoked scarcely any inquiry last week and the outlook for mills at the present moment is far from cheerful. Unless piecegoods prices harden with a corresponding decline in the value of cotton, sales during the next few months will be on a losing scale.

The forward position is influenced by a persistent market rumour that the import duty on cloth will be reduced by 5 per cent. from April and until the position is clear buyers are chary of further commitments.

The yarn market is featureless with a tendency for prices to be steady over the week end. Bombay reports a small turn-over and while prices have remained unchanged sales have been disappointing. There was practically no demand in Bombay from important consuming districts and stocks have accumuated. In spite of offers of lower rates buyers are not forthcoming. Much the same conditions obtain in the South Indian markets.

The following comparative statement, showing the monthly importations of piecegoods and yarns into Calcutta from Great Britain and Japan during the past six months, will be of interest:

	Gr. Britain Pkgs.	Japan Pkgs.
August, 1934	10,478	10,861
September, ,, ...	8,501	15,676
October ,, ...	10,579	15,283
November, ,, ...	6,761	9,694
December, ,, ...	4,399	8,039
January, 1935	6,164	12,147
January, 1934	5,932	5,185

Increases in the imports from Japan during January this year as compared with those for January last year will be found under all the main headings except Hosiery.

	Jany., 1934 Pkgs.	Jany., 1935 Pkgs.
Grey Dhooties	Nil.	2,678
Grey Shirtings	591	2,983

BULLION

GOLD

Calcutta, February 14.

Over the week-end the Bombay market moved within narrow limits with a fair amount of export business. The market is still keeping under the United States dollar parity due to uncertainty about the Gold Clause decision, which has been deferred. There is hardly any nervousness about an adverse decision due to good enquiry for ready gold from foreign interests at slightly under the prevailing level.

Daily arrivals in Bombay were about 20,000 totals which were absorbed against short covering for settlement deliveries and the market is steady about the parity level.

Stocks in Bombay on February 8 were 6 lakhs tolas (including sovereigns).

According to a statement in the Assembly by the Finance Member approximately 27 1/3 million fine ounces of gold were shipped from India between September 22, 1931, and January 12, 1935.

New York reports state that the situation remains unchanged, the preponderating opinion being that *Status quo* will be maintained, if necessary, by legislation or administrative action, although recognition of adverse decision in one or more cases would at least temporarily affect securities as well as commodities should foreign exchange weakness follow.

Total exports from United Kingdom during the week ended February 1, 1935, amounted to £3,457,000 of which £3,396,000 were shipped to the United States. Total imports to United Kingdom during the same period amounted to £3,332,000 of which Africa contributed £1,147,000; India £445,000; France £656,000 and the Netherlands £810,000.

LONDON—Air Mail Week.

The Bank of England gold reserve against notes amounted to £192,403,692 on the 23rd instant, showing no change as compared with the previous Wednesday.

On the 25th instant the Bank announced the purchase of £30,433 in bar gold.

In the open market bar gold to the vaue of about £2,200,000 was disposed of during the past week.

There has been buying on American account and further shipments have been made to New York, although these will not arrive before the reassembly of the United States Supreme Court on February 4th.

There is still a measure of uncertainty, the majority of operators abstaining from making shipments and prices were fixed at a substantial discount on dollar parity.

SILVER

Calcutta, February 14.

The Bombay market ruled easy on tired bulls unloading for near delivery. The difference between end of February and end of March settlement widened to over Rs. 5-4-0 on persistent rumours about the duty being reduced by Rs. 5-13-9 in the forthcoming budget. Some selling on Indian account in London continues due to liquidation by hedge operators, but as a fair amount has already been liquidated, there is less pressure to sell in London.

Stocks in Bombay on February 8, were 23,000 bars. Total exports from United Kingdom during the week ended

February 1, 1935 amounted to £355,000, of which £283,000 worth of metal was shipped to the United States. Total imports into the United Kingdom during the same period amounted to £436,000, to which Hongkong contributed £330,000. .....

London Air Mail week:

The market continued to show a steady tone and there has been little change in quotations during the week.

There has been further buying by China speculators and purchases for the American Treasury were again a feature. Weak advices from Bombay were followed by substantial re-sales by the Indian Bazaars, which, with other speculative re-sales, were the main source of supply.

The market maintains its good undertone, although there has been a disposition to liquidate some of the speculative holdings, possibly induced by nervousness prevailing in other markets.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 21st instant to mid-day on the 28th instant:—

TEA

Calcutta, February 14.

Auction sales on February 12, comprised about 11,7000 packages of which 6,000 were broken and leaf grades, the remainder being dust. The former two were irregular and rather easier and prices generally showed a decline of 3 pies, Fannings being the weakest feature.

At London auctions on February 11, 30,500 packages of Indian tea were submitted for sale, on a good demand. Common sorts were easier, but best autumnals sold the most.

The following are the full particulars of Sale No. 33.

Tea with Export Rights.	1935	1934
Offered	11,389	8,958
Sold	9,660	8,894
Average	0-7-10	0-10-11

Tea for Internal Consumption.

SUGAR

Calcutta, February 14.

The Indian interest has still remained with the Bombay centre, and the other markets have mostly looked on—in fact Calcutta advice, that there was no demand in that port except for the special millings, for which the requirements are limited. Latterly the China markets appear to have taken some more interest, and sales have been reported to Shanghai, but the interest does not appear to be sufficiently strong to maintain any advanced prices yet. Steamship liners have assisted the business for forward positions for India by extending the period for booking freight beyond the customary three months, and fair bookings have duly been made, but the demand for the earlier shipments has brought several chartered steamers in this market.

Manila

A market report dated t he 31st December shows that on the 31st December, 1934 no sugar shipments had been made ex this years crop to the American Market. At the same date the year previous 198,460 tons had been exported to the United States markets. This report states that indications were that shipments for February were likely to be very limited. Holders in general were not prepared to accept the present low prices, and the issuing of export permits is likely to be considerably delayed due to difficulties being encountered by the Centrals in completing the audits necessary, for the fixing of planters individual quotas. In view of these difficulties exporters have shewn very little interest in buying, with the consequence that although milling is in full swing, practically no sugar has as yet changed hands.

Messrs. Bird & Co.'s report dated February 9 states :—

PRICES.

		Ready.	Forward.
Calcutta	...	9 8 6	9 9 0
Bombay	...	10 0 0	10 0 0
Jamnagar	...	9 9 3	9 10 0
Bhavnagar	...	9 9 9	9 10 0
Karachi	...	9 12 0	9 11 6

Calcutta

The Java sugar market during the week under review remained firm and this was caused principally by the very small stock in hand. Stock holders showed no desire to sell out their holdings except in small lots from day to day to meet demand at best possible prices obtainable. This position is likely to remain and prices may improve further as the next arrivals are not due before approximately the 20th of this month. Importers are not at present interested in forward business due to the decline of secondhand quotations of Indian sugars. Indian sugar market prices declined during the week due to strong competitive selling among speculators, weak stock holders and poor demand and the market generally was unsettled. Dealers are not interested in anything but ready positions and then only for their day to day requirements. No improvement in demand is likely to set in until local buyers feel more confident of the future.

Bombay.

During the week under review the market continued dull and depressed and closed with an easy undertone. Prices during the week declined by about one anna per cwt. for ready, this decline being mainly due to the poor offtake from consuming centres and the expectation of fresh arrivals booked at lower rates. Inspite of the steady tone of the Java market and quotations of importers, prices for forward positions declined by about two annas per cwt. due to the pressure of sales by outsiders for near positions which resulted in dealers preferring to purchase from these outsiders rather than replenish their stock at the higher rates asked by importers. The Indian sugar market during the week under review showed little activity and prices declined by about two annas for ready as well as forward positions. This was mainly due to the decline in local Java prices and easier advices from Cawnpore. Arrivals were reported to be about 800 tons and stocks estimated at the same figure.

Jamnagar and Bhavnagar

During the early part of the week under review the sugar market in Jamnagar remained firm in sympathy with the previous advance in Java prices both here and at other Indian ports. Demand showed a slight improvement but was only of a hand to mouth nature. The s.s. *Nawab* arrived during the week and unloaded about 27,000 bags, while a further 25,000 bags are expected by the s.s. *India*. Although anxions to liquidate stocks importers are reluctant to do so at reduced prices, but due to the heavy arrivals prices eased slightly at the end of the week. Stocks are estimated at 35,000 bags which is an increase of 146,000 bags as compared with the previous week. The Bhavnagar market remained firm during the early part of the week under review and demand from consuming centres was satisfactory. Later on however prices fell slightly due to the fairsized shipments expected shortly. Stocks are estimated at approximately 30,000 bags.

Delhi and the Punjab

In Delhi and surrounding markets the firm undertone reported last week did not continue and inspite of the damage reported to have been done to the standing crop of sugar cane in the Meerut and Hapur districts by insect disease, the market showed a downward tendency. Second hand prices declined by about -/3 - per maund for forward positions and -/1/- per maund for ready and near positions due to the desire of dealers to liquidate their holdings in the face of strong pressure from sellers for despatching instructions against January delivery sales. Further North similar conditions are reported with little or no business passing either for ready or near positions due to the higher rates being quoted by factories and poor offtake.

Karachi

The Java sugar market in Karachi is reported to be firm for ready delivery while for forward positions prices show a decline of one to two annas per cwt. Stock holders are said to be liquidating their previous commitments at slightly lower rates and a few blank sales are reported to have been made. Importers are watching the position very carefully and are only entering the market when the opportunity arises of selling at their current rates.

Cawnpore

During the early part of the week there was little or no activity in the market with the exception of second hand sales made at lower rates by dealers wishing to liquidate their holdings in response to pressure from factories for despatching instructions. Later on there were very small signs of increased enquiry, bat nothing that could be described as a return to normal. Dealers continue to discuss the vexed question of the possible increase in the import duty and until some stronger rumour starts, buying activity is unlikely.

General

Messrs. Willett & Gray's latest estimate of world production for 1934-35 amounts to 25,165,000 tons as against 25,365,000 tons in 1933-34, a reduction of 200,000 tons or less than one per cent. The prospects for the world sugar market in 1935 can be looked at from many angles. Perhaps the best argument in favour of an optimistic outlook is that the present level of prices is so low as to exert a restraining influence upon any excessive selling, and to prevent any undue expansion in production. Low prices should also help towards an increased consumption.

SUGARCANE CROP

The area under sugar cane in India is estimated at 3,471,000 acres, as against 3,308,000 acres last year, or an increase of 5 per cent. The total estimated yield of raw sugar (gur) now stands at 5,085,000 tons, showing an increase of 4 per cent. over the last year's yield of 4,872,000 tons.

MISCELLANEOUS

WHEAT

Calcutta, February 14.

Bearish all-India acreage report and local and upcountry rain accounted for the easy tone of the Karachi market during last week, prices having declined by Rs. 1-2-0 per candy, with July delivery lowest touching Rs. 23-5-6. The All-India acreage report of 33,158,000 acres shows a decrease of only 3 per cent over last year's outturn as against about 12 per cent. generally expected. With the exception of last year, the current acreage is the largest in the past 20 years. Weather conditions, which were not favourable, have improved considerably and crop prospects are good.

Trading was moderate in "Forwards," while in the spot market sales totalled about 15,000 bags to local mills. Upcountry arrivals averaged 2,000 bags per day and last week's exports totalled 16,595 bags, of which 260 bags were for Bombay and 16,335 bags for Calcutta.

Punjab prices ruled easier, being about 2 annas per maund lower. Okara was quoted at Rs. 2-2-0 for ready which works to an equivalent of roughly Rs. 23 per candy f.o.r. Karachi.

THE FIRST ALL-INDIA WHEAT FORECAST, 1934-35

This forecast is based on reports received from provinces and States, which comprise a little over 98 per cent. of the total wheat acerage in India. The returns relate to all the important wheat-growing areas in India except Kashmir. The figures dealt with in this report generally relate to the area sown up to the beginning of January.

The total area sown is estimated at 33,158,000 acres, as against 34,286,000 acres (revised) at this time last year, showing a decrease of 3 per cent.

Climatic conditions at sowing time were not, on the whole, favourable. As noted above, reports regarding prospects of the crop given below relate generally to the position at the beginning of January.

The detailed figures for the provinces and states are given below.

Provinces and State	This year 1934-35 First Forecast (1,000 acres.)	Last year 1933-34 First Forecast (1,000 acres.)	Last year 1933-34 Final Figurea (1,000 acres.)

STATISTICAL INFORMATION

INDIAN CUSTOMS REVENUE.

According to returns received in the Department of Commercial Intelligence and Statistics, the grand total of gross Indian Sea and Land Customs Revenue (excluding salt revtnue) collected during the month of January, 1935 amounted to Rs. 5,15 lakhs as against Rs. 4,45 lakhs in the preceding month and Rs. 4,40 lakhs in January, 1934. The total revenue realised in the ten months ended January, 1935, was Rs. 44,62 lakhs as compared with Rs. 40,73, lakhs during the same period last year. Import duties accounted for Rs. 32,37 lakhs of this amount, export duties for Rs. 3,41 lakhs, excise duties on motor spirit, kerosene, sugar, matches and steel ingots for Rs. 4,12 lakhs, Rs. 2,44 lakhs, Rs. 55 lakhs, Rs. 1,13 lakhs and Rs. 6 lakhs respectively and Land Customs and Miscellaneous for Rs. 54 lakhs. Increases were noticeable under import duties on cotton fabrics, motor cars, kerosene, metals other than iron and steel etc., silver bullion, coin, sheets, plates and other manufactures, artificial silk yarn and thread, cotton hosiery, dyes derived from coal tar pneumatic rubber tyres and tubes, railway plant and rolling stock, oils, batching, fuel and lubricating, wireless reception instruments and apparatus, machinery, cotton, raw, and tin, block; excise duties on motor spirit and kerosene also showed noticeable increases. On the other hand, import duties on sugar, silk fabrics, cotton yarn and thread, betelnuts, boots and shoes, motor spirit, tobacco, tea, paper and stationery, toys, games and sports goods, spices, iron and steel, liquors and silver wire, thread and other manufacturers, the export duties on rice, jute, raw and land customs receipts showed noticeable decreases.

GOLD EXPORTS FROM BOMBAY

Gold worth Rs. 1,02,68,640 was exported from Bombay for foreign countries during the week ended February 9.

The s. s. Naldera, which sailed from Bombay for London on Saturday afternoon carried gold worth Rs. 1,02,68,640. Of this gold worth Rs. 49,96,653 was for London optional New York, Paris or Amsterdam; gold worth Rs. 12,61,011 was for Amsterdam optional London. Paris or New York and the rest was for London.

The total value of gold exported from Bombay since Great Britain went off the gold standard now amounts to Rs. 2,19,63,36,718.

(*Continued from page 517*)

exist now have been examined and pointed recommendations have been made for improving them. Proposals on similar lines have also been made by the Mysore Committee.

While the topics that have been already covered in this letter are noteworthy in their own way, by far the most important development from the standpoint of the provincial economy and the politics of the country alike, is the organisation of the weavers in the Salem District into a special body. It is not clear whether the new organisation is the result of a new consciousness among the weavers or whether it owes its inspiration to outside influences. It would appear that the Congress has had a great deal to do with it. Even if it be supposed that the new association is not a spontaneous development among the workers themselves, its formation is a matter for gratification. Its principal idea is to make it possible for the handloom weavers so to organise their affairs that the interloping middlemen will be eliminated out of the trade. Sponsors of the movement have calculated that the value of the output of their handlooms come to about a lakh of rupees for each working day ; and of this, they contend, nearly Rs. 25,000 is pocketed by middlemen, whose services are by no means worth the price they are able to appropriate. It is expected that the new organisation will gradually develop on a co-operative basis, the association being able ultimately to find the credit, the raw material, the general guidance required in the trade and the facilities for efficient marketing. Considering the extraordinary quality of the hand-woven goods of Salem, there should not, strictly speaking, be any difficulty in the Salem weavers gradually procuring the necessary credit. So far as one can judge, without having had the opportunity to go into the details of the question, the hand-woven goods of the area command a ready, almost avid, market throughout the presidency. The only thing lacking is the spirit of co-operation and experience in the management of co-operative organisations, without which efforts of this kind cannot be certain of success. Considering that the new organisation has been fathered, so to say, by the Congress, it may be supposed that a great deal of enthusiasm and not a little of organising capacity will be brought into play. If the new organisation of the Salem weavers should prove a success or even if it should be able to produce some tangible results within a considerable length of time the present move will prove to be one of the most momentous developments. For there are throughout the presidency any number of such centres for handloom weaving which can emulate the Salem example to the profit of themselves and the country as a whole. Politically, the better organisation of the weaving industry in Salem will be a feather in the cap of the Congress. And Congressmen know how to display it in the most effective manner.

Investor's Supplement

Vol. XV. No. 7 SATURDAY, FEBRUARY 16, 1935 Price Re. 1

THIS WEEK'S SETBACK—WHAT NEXT ?

Gloom in early part of the week ; and cheer at the finish.

The week opened dismally. Rot seemed to have set in every section of the stock exchanges. There was a rude shake-out ; and gloomy prophets were not wanting to forebode that the sharp fall of the week would soon degenerate into a precipitate decline. Remember the catastrophe of the Spring of 1933—said they.

Many gullible folk who got in at the top cut off their transactions at the bottom levels, lest, in the place of the 2 per cent. difference in a scrip like 3½ per cent. Rupee Paper, they might be faced with a difference four or five times as much. The conditions that prevailed for two or three days were well nigh panicky.

RECOVERY AFTER REACTION

Special Cable

(From R. Gordon Cummings)

London,
February 14.

Nervousness unfounded.
Rumours Political.
Foreign selling main cause of headlong decline.
Markets rapidly improving.
Expect further and substantial recovery in giltedged and good class shares.

Just at the time when operators had a handy opportuntiy to pick up scrips at cheap prices, or to average against their dearer purchases, the sentiment of panic was a serious and restraining factor.

The result is that most of the weak holders have been weeded out. From this point of view, the technical position of the various sections in the share markets is considerably improved.

The rise in share prices since the middle of January had been one strong, great and uninterrupted pull. It is true that, in this upward movement, a considerable body of pure speculators, big and small, had taken part. At the same time, there can be no doubt, that investors reconciling themselves to the era of lower yields, have begun to pick up selected scrips, with a view to lock them away. The spectacular rise of four weeks was due less to speculative than to intrinsic factors. This was conclusively proved by the great resistance which the market offered at every reaction in prices.

It must also be remembered that selected industries like sugar, steel, jute, paper and cement are now experiencing appreciably improved conditions. That shares of good managing agents in these sections should have risen substantially and rapidly, can, therefore, be no matter for surprise.

Selected cotton scrips were also the recipients of attention from investors. The cotton mill industry is certainly doing better ; and mills in upcountry centres have, as was to be expected, responded most readily to the more favourable outlook.

With buying so general amongst the public, and with sellers more and more reserved, it was inevitable that shares of companies, whose balance sheets disclosed strength and whose management was assured of efficiency and correct financial policy, have come to yield a rate which is only one or two per cent. higher than that forthcoming on government securities.

The public are now satisfied that the better class industrials are, so to say, a second line to giltedge and a safe refuge in times when government securities yield roundabout 3 per cent. If jute shares of approved efficiency and of strong reserve position give a yield of 5 per cent. subject to tax, or about 4½ per cent. free of tax, investors are content. The same remark applies to sugar companies under the management of Begg Sutherlands and Bradys ; to cotton mills like Muir, Bombay Dyeing, Buckingham and Carnatic, Madura, Gokak and Central India ; and to Cement companies whose fortunes are in the safe keeping of the alert Cement Marketing Board.

Any considerable setback in scrips of this nature can take place only if there is a serious disruption in giltedge values. *Indian Finance,* far from anticipating any such disruption, is firmly convinced that the government securities market would shortly be witnessing further notable gains.

Giltedge has only two anxious clouds in the horizon. The first is the developments in the London giltedge market. The second is the credit policy and currency and monetary transactions of the Government of India.

BULLISH STATISTICAL POSITION
BURLAP IN AMERICA

(Special Cable)

(From an Occasional Correspondent)

New York,
February 14.

Gold case impossibe to forecast.

Stocks of hessian end—January spot 116 million yards, afloat 109 million yards against 122 million yards and 106 million yards respectively in December.

Consumption in January 470 million yards against 370 million yards in December, 1934 and 410 million yards in January, 1934.

So far as the first is concerned, we believe that such effect as the price fluctuations of giltedge in London have on the prices of Rupee securities, is purely sentimental. If one were to understand the position aright, the Rupee securities stand on their own footing.

The London market is exposed to the blasts that blow from all the financial centres of the world. If foreign funds flow in a heady stream, giltedge prices in London shoot up. If foreign funds flow out, there is a sharp setback.

India has no foreign short-term funds to take wings and fly. The foreign holders of Indian securities are but small. The fortunes of our securities are, strictly speaking, beyond and outside foreign influences.

That our market is smaller, that our resources are more slender, and that we are more or less self-contained, are conducive to a fundamentally healthier market.

In the past two years, giltedge operators in India have been prone to attach far too much importance to developments in London. We would remind operators and investors that, prior to 1932, it was the 3½ per cent. Rupee Paper which was quoting a good few points higher than 3½ per cent. sterling paper. We believe that, if there is a more widespread appreciation of the innate vitality of the Indian giltedge market, Rupee securities will pursue their course, undeterred by price gyrations in London.

We do not, therefore, see any justification for undue prominence being given to the behaviour of the London market.

As for the policy and operations of the Indian Government, it is our painful duty to record that their entire pre-occupation has always been exchange, and they care a brass farthing for the investors who trust them and put out their funds in their securities. Nevertheless, the technical position of the Indian giltedge market has defied the clumsy and uncouth tactics of the Government.

Moreover, in another six weeks, the Reserve Bank authorities will take charge of currency and credit control. Sir Osborne Smith as the head of the Reserve Bank may be trusted so to shape his currency and credit operations as to result in stimulating, not impairing, the credit of the Government and the strength of giltedge.

This dismal week has not, therefore, shaken our confidence. On the other hand, our confidence is reinforced, as this shake-out must have eliminated the weaker holders and rendered the market more healthy.

We believe that, failing adverse developments abroad, such rise as may now start will prove a cleaner and sharper rise.

Worth-While Investments:

INDIA:

TWINS AMONG JUTE MILLS

Good by every criterion

By "Watch-dog"

Kamarhatty and Kanknarrah are in the nature of "twins" in the market for jute mill shares. It is these twins that, in the first instance, created and established the prestige of Jardine Skinners as amongst the most efficient and most trusty of managing agents of jute mills.

If I remember right, these were the only two jute concerns under the management of Jardine Skinners, till early last decade; and the managing agents put their best into the companies committed to their charge. Later on, Howrah and Reliance were taken over from Howeson Brothers; and these four mills have to-day the best record for unassailable liquid position, for block value standing at a low figure, for good profits and satisfactory yield, and for large earning power per loom.

The accounts of Kamarhatty and Kanknarrah for the second half of 1934 have been issued this week and make cheerful reading. The figures disclosed therein go to show that though the shares of these two companies are an active market (which means that prices might tend to stand at higher levels than would be the case in regard to shares wherein there are only infrequent transactions), the current market quotations are much below the prices which these shares should command in comparison with most other jute shares.

There is, I believe, further margin for improvement; and this improvement is all the more welcome in regard to shares which enjoy a free market and in which the difference between buying rates and selling rates is necessarily small.

Of the two concerns, Kamarhatty has the advantages of a lesser proportion of ordinary capital to the total capital; larger outlay on block which has, however, been depreciated to the same book value as the sister concern; greater stocks of jute on which the secret profit by virtue of the current and prospective rise in raw jute is bound to prove more favourable; and bigger loomage.

Kanknarrah has, in its turn, its own superior points. The Reserve Funds are higher; the entire stocks are financed without any recourse to loans secured on stocks; it has two jute presses; and the profit per loom has generally worked out higher.

I may first analyse the position of Kanknarrah. The ordinary capital is Rs. 30 lakhs in shares of Rs. 100 each; 6 per cent. preference shares of Rs. 100 each amount to Rs. 10 lakhs. The total paid up capital is thus Rs. 40 lakhs.

The Reserve Fund amounts to Rs. 27 lakhs, made up as under:

Dividend Equalisation Fund	...	Rs. 10 lakhs
Working Capital Fund	...	,, 8 ,,
General Reserve Fund	...	,, 9 ,,

Other sundry debts inclusive of the amount required for distribution of dividend equals Rs. 11¾ lakhs.

On the assets side, the block, which originally cost Rs. 101¾ lakhs, has been depreciated by Rs. 74¼ lakhs to Rs. 27½ lakhs. The jute presses stand in the books at Rs. 1¾ lakhs. The total block at present book value is, therefore, Rs. 29¼ lakhs which is less than the ordinary paid up capital.

Outstandings, deposits and advances are equal to sundry liabilities.

Stocks are Rs. 40 lakhs, of which jute accounts for Rs. 31¼ lakhs. Doubtless, Kanknarrah is most favourably situated in regard to stocks of raw material at prices considerably lower than the current rates.

Cash balance amounts to Rs. 9 lakhs. It will thus be seen that the net liquid assets are over Rs. 40 lakhs, that is, in excess of the paid-up capital.

The profit for the half-year was Rs. 6¾ lakhs. After taking into account the amount brought forward and making other adjustments, the balance is Rs. 8 lakhs. Depreciation on machinery receives Rs. ½ lakh, preference shares at Rs. 3 per share for the half-year claim Rs. 30,000. Ordinary shares at Rs. 15 per share take away Rs. 4½ lakhs. The carry-forward is increased to Rs. 2.68 lakhs from Rs. 2.56 lakhs.

The dividend for the first half-year of 1934 was Rs. 15 per share. So the dividend for the whole year was Rs. 30 per share of Rs. 100. The current market rate of the ordinary shares is Rs. 585. Rs. 30 on Rs. 585 works out to a current yield of 5.1 per cent. tax free.

This is fully ½ per cent. to ¾ per cent. higher than the yield available on most other jute mill shares. Even at Rs. 700, the shares would be giving a return of 4¼ per cent. tax-free. There is, therefore, good margin for appreciation in these shares.

This conclusion is emphasised and underlined when we turn to the calculation of the profit per loom. The Kanknarrah has 1237 hessian looms and

290 sacking looms or a total of 1527 looms. Thus, the profit of Rs. 6¾ lakhs on 1527 looms works out to Rs. 442 per loom. Here again, the average profit per loom amongst the jute mills is in the neighbourhood of Rs. 250. It should, therefore, be concluded that Kanknarrah's earning power is most satisfactory.

Turning to the balance-sheet of Kamarhatty, the ordinary capital is Rs. 24 lakhs in shares of Rs. 100. There is also Rs. 16 lakhs in 6 per cent. preference shares of Rs. 100 each. Total Rs. 40 lakhs. Dividend Equalisation Fund stands at Rs. 10 lakhs and the General Reserve at Rs. 11 lakhs; the total Reserve Funds are Rs. 21 lakhs. Liabilities inclusive of loans and impending dividend payments amount to Rs. 20 lakhs.

The block, at an original cost of Rs. 131½ lakhs, has been depreciated to Rs. 30¾ lakhs. This must be deemed a most conservative valuation for a mill with 1250 hessian looms and 547 sacking looms or 1797 looms in all.

Kanknarrah carries jute stocks for no less than Rs. 40 lakhs—an extremely bullish factor. Total stocks come to Rs. 44 lakhs. Miscellaneous assets come to Rs. 9½ lakhs. Net liquid assets are, therefore equal to Rs. 33½ lakhs—a very satisfactory position.

Profit for the half-year was Rs. 7½ lakhs. After adjustments, the balance comes to Rs. 8½ lakhs. Buildings and machinery are depreciated by Rs. 1½ lakhs—too big a provision in relation to the low value at which the block stands in the books. Preference shares claim Rs. 48,000. The dividend on ordinary shares is Rs. 17-8 and requires Rs. 4.20 lakhs. The carry-forward is Rs. 2.37 lakhs, as against Rs. 2.27 lakhs brought in.

The dividend for the whole year is Rs. 35. The present market price of Kankarrah shares is Rs. 670. A return of Rs. 35 on a share valued at Rs. 670 works out to an yield of 5.2 per cent. tax-free. At Rs. 800, the yield would come to 4.4 per cent. There is no reason why an active counter like Kamarhatty should not rise to a level which will yield only the same rate as the other scrips in this section.

The profit per loom works out to Rs. 421. It will thus be seen that Kankanarrah has a slightly higher earning power per loom than Kamarhatty; but even so, there are hardly two or three mills which make a better showing in this regard than Kamarhatty.

It may be added that in the first half of 1934 also, the profit per loom of Kamarhatty at Rs. 454 was slightly less than that of Kanknarrah at Rs. 462.

* * * *

Cerberus, posted at the entrance to Hades, must have had a hell of a job guarding the folk inside hell. But if another monster had started watching him from outside, the strain from all sides must, surely, have proved too irksome. That is how I feel. "Watching the Watchdog" is, doubtless, amusing to my correspondent but may prove uncomfortable to me. At any rate, it makes my weekly job far too onerous.

"Watching the Watchdog", in company with many others in Bombay, is worried about the hectic rise that has taken place in Tata Steel Ordinaries and Deferreds. I find that Mr. K. R. P. Shroff has issued a warning to the public lest this gambling should exceed the limits of decency or prudence. The *Times of India* has recurrently furnished warnings and admonishings. It is the Surat operators that are said to be the engineers of all this flare-up. But, shout the Jeremiahs, the day of reckoning is not far off.

My own friends in the Western Capital have no apprehensions about the day of reckoning. They are unrepentently bullish.

Equally exhilarating is the news received from Jamshedpur. The good old plant in the steel city has been surpassing itself and has built fresh and fresh records, month by month. What was once deemed the utmost maximum capacity has been left behind. Production is bigger; production cost is lower. The doings in Jamshedpur do certainly aid and abet the goings-on in Bombay.

Nevertheless, I must publish the following from "Watching the Watchdog" as I am always particular that the party on the other side must be given his full say:

> "You have done yeoman service to the public by publishing my letter which harshly but inevitably criticises your recommendation with statistics of the Tata Steel ordinaries and deferreds after the rates touched Rs. 147 and Rs. 685 (not Rs. 585 as quoted in your article on Worth While Investment on the 9th inst). I cannot but congratulate the Editor or you on that score.
>
> But you omitted the sign of interrogation put by me after the words "since four months," since when your Bombay correspondent, you say, was constantly tipping the shares. It means since the end of October, 1934. Now you refer to the advice given by him in *Indian Finance* page 1403 on December 1, 1934, when the rates were Rs. 98-12 and Rs. 428-12 for ordinaries and deferreds respectively. He wrote the following words in italics: 'on very small rise in ordinaries and deferreds, we prefer profit taking' (report dated 29-11-34). During the ensuing week, that is, on December 6, 7934, the rates soared to Rs. 106-4 and Rs. 470 for ordinaries and deferreds respectively.
>
> I have made my friends invest in ordinaries at Rs. 28 and in deferreds at Rs. 162-8 and second preference at Rs. 44 only a few years ago. That was the time when you should have recommended the ordinaries and deferreds, especially. Let me add that all these shares have been withheld intact. Only fifteen months ago I recommended to my friends Messrs. Reed Ward & Company of Calcutta to invest in deferred shares at roundabout Rs. 162-8 the then-ruling rates. Thus it is no use imagining me to be a bear, as you wrote in your remarks on my letter."

INVESTMENT BREVITIES

The considerable set back of this week presents a good opportunity for investors to enter the market at lower rates. I wonder how many would have done so or will do so. I have always found that when the market is going down, few have the courage to average their holdings. In a rising market, on the other hand, there is concentrated buying.

* * *

The fall in British Funds and India sterling stocks was due, amongst other reasons, to Continental selling. So far as the Indian stock exchanges are concerned, we have no such fears from outside sources. The very smallness of our market makes for its compactness and self-containedness. London is already recovering. The setback of this week should, therefore, prove shortlived.

* * *

Those who have not already bought up 3½ per cent. Rupee Paper roundabout Rs. 96-8 must hasten purchases; and anything that you can get of this scrip below Rs. 98 must turn out to be a profitable transaction.

* * *

After the reaction, Fort William and Champdanys are particularly attractive. Their reserve position and capital plan are most favourable.

* * *

Imperial Bank shares have shed a few points in recent weeks. The near future must witness more than the recovery of this loss.

Central India Cotton mills had a slight reaction. But they must resume their rise—a substantial rise, I expect.

* * *

Bombay Dyeings are under-valued. Perhaps, the best mill in Bombay and one of the biggest in India. Continued good management and strong reserves.

* * *

Shahabad cements are, I understand, in for a rise.

* * *

At the lower levels, Tata Steel Ordinaries must be again attractive.

Worth-While Investments:

BRITAIN:

BOOTS PURE DRUG COMPANY.

By R. Gordon Cummings.

Like many world-famous businesses, Boots Pure Drug started in a small way. Under the guiding genius of the founder, the late Lord Trent, the size of the business has multiplied many times over since the present company was registered in 1888 with a small capital. At present the number of retail shops is well over 1,000, these being equipped for retailing the ordinary goods usually sold by chemists, together with fancy goods, stationery etc., and an extensive lending library system. The Company also owns large manufacturing laboratories at Beeston where a large part of its retail products are made, these laboratories being the most modern in the World.

The authorised capital has been steadily increased to its present amount of £3,000,000, all of which is issued, being divided into £10,000 in 7 per cent. £1 A cumulative preference, £25,000 in 6 per cent. £100 B cumulative preference, £100,000 in 6 per cent. £1 C cumulative preference ; £1,265,000 in A, B, C and D 7 per cent. preferred ordinary shares of £1 and £1,600,000 in 5s. ordinary shares. The issued ordinary capital was increased by £100,000 to its' prevent amount in June, 1934, when ordinary shareholders were offered one new share for every 15 held at 15s. each.

Up to May, 1933, control was vested in the United Drug Company of the U.S.A., which held 1,125,000 of the then issued 1,500,000 £1 ordinary shares. The transfer to this country of 1,000,000 of the ordinary shares held by United Drug was almost a financial romance. Various groups made bids for these shares, but owing to the intervention of the British Treasury which objected to the export of capital abroad, one deal had to be abandoned. In the end Tobacco Securities Trust purchased most of the shares with funds held abroad, these shares being later placed amongst influential houses in London at £6 15s. each. In October, 1933, the 1,500,000 £1 ordinary shares were each divided into four shares of 5s. each. There are no debentures or mortgages outstanding.

Preference and preferred ordinary dividends are paid quarterly on 31 March, 30 June, 30 September and 31 December. Ordinary dividends are distributed quarterly in March, June, September and December, payments for the last few years being 6 per cent. less tax each quarter followed by a tax free bonus after the year end.

Considering the depressed conditions in this country during the three years ended 31st March, 1933, it is a great tribute to the management of this concern that very little decline was shown in profits. Results for the last eight years ended 31st March, 1934, are given in the following table:—

	Net Profits after Tax.	Pref. Divs.	Ordinary % Earned.	Paid.†	To Reserve,
	£	£			£
1927	641,753	544,983	39·4	24	A. 250,000
1928	701,973	605,223	43·4	27¾	150,000
1929	750,152	653,402	46·9	29	200,000
1930	724,869	628,119	45·2	29	190,000
1931	722,264	625,514	45·1	29	200,000
1932	731,891	635,141	46·7	29	A. 200,000
1933	701,453	604,703	44·1	29	A. 200,000
1934	744,866	648,116	47·3	29	B. 166,018

†Dividend 24% each year, less tax, together with 3¾% bonus, less tax in 1929, and 5% tax free bonuses in succeeding years.

A. Including £100,000 in these years to works development fund.

B. Including £16,018 to freehold property reserve.

The distribution policy of the directors has enabled the Company to expand its activities considerably without having to raise much additional capital. It is generally understood that profits are struck very conservatively, and there is no doubt that earnings of the subsidiaries are much more than the dividends paid to the parent concern. Unfortunately, consolidated profit and loss accounts and balance-sheets are not given.

Turning to the balance-sheet, these are again impressive. After making adjustments for final appropriations the figures for the past two years are as summarised below:—

	1934.	1933.
	£	£
Property, etc. ...	3,548,037	3,451,127
Subsidiaries—Shares ...	945,496	945,042
Advances (net) ...	944,422	727,840
Liquid Assets ...	1,248,717	1,187,435
Total ...	6,686,672	6,311,444
Capital—Issued ...	2,900,000	2,900,000
Creditors, etc. ...	1,137,738	1,034,698
Reserves—Depreciation, etc. ...	761,649	686,559
Reserves—General ...	1,650,000	1,500,000
P. & L. Balance ...	237,285	190,187
Total ...	6,686,672	6,311,444

At 31st March, 1934, the liquid position as shown by the accounts was not exceptionally strong, but it must be pointed out that the item for sundry creditors included £402,722 provision for staff pensions fund, together with undisclosed reserves for contingencies. Liquid assets were made up of £126,113 cash, £248,070 British Government securities, £116,999 debtors, and £757,535 stocks.

As regards reserves, those for depreciation are shown separately, the amount in respect of fittings, etc., being £520,383, leaseholds £121,536, freehold properties £16,018, and works development £103,712. Of the total property account no less than £2,195,474 was in respect of freehold land and buildings. In the case of leasehold properties these are mostly held on long tenures. Investments in subsidiaries mainly represent interests in five companies operating retail shops. As pointed out above profits on these concerns are understood to be dealt with very conservatively, and the same remarks apply to the valuation of the investments therein.

Having weathered the late economic storm so well it is reasonable to assume that the prosperity of Boots Pure Drug will continue, thus explaining the low yield of £3-3s.-6d. per cent. gross offered on the ordinary shares at current price of 48s. While this yield is low, prospects certainly make the shares a promising lockup holding. In fact, compared with the yields offered and the very high prices of other chain store companies' shares, they are by far the best investment. Investors should remember that the general reserve exceeds the ordinary capital. In the near future a capital bonus is likely to be distributed, the last occasion when such a course was adopted being in 1926, the ordinary capital being then increased by a 50 per cent. bonus from £1,000,000 to £1,500,000.

Preference and preferred ordinary dividends have been covered several times over for many years, thus making these issues almost giltedged investments. Supplies, however, are very limited and it is sometimes difficult to purchase even a small number of shares. The A, B, C and D 7 per cent. preferred ordinary yield 4⅜ per cent. at 32s., while the 6 per cent. C preference shares offer just over 4 per cent. at 29s. 6d.

BRITISH COMPANIES IN INDIA

PENINSULAR AND ORIENTAL STEAM NAVIGATION COMPANY

Readers of *Indian Finance* will, no doubt, be familiar with this fine, old-established shipping company which operates services between Europe and India, Australia, etc. The present concern was incorporated by Royal Charter in 1840, and is now one of the few trading companies in Great Britain operating under direct charter from the Government. Since the original incorporation was granted, various supplemental charters have been obtained to cover a large expansion in interests. At present the Company directly owns only 39 vessels aggregating 467,785 gross registered tons, but controls subsidiary and allied shipping concerns owning a further 280 steamers with a gross registered tonnage of 1,546,349, thus making gross totals of 319 steamers and 2,014,134 tons. The companies controlled are British India Steam Navigation, New Zealand Shipping, Union Steamship of New Zealand, Hain Steamship, Orient Steam Navigation, and General Steam Navigation. Contracts are held for the carriage of mails between Europe and Eastern countries.

Continued expansion in activities has naturally resulted in several increases in the authorised and issued capital in recent years, the present authorised amount of £7,649,853 comparing with £3,500,000 in 1914. The last issue for cash was £1,000,000 deferred stock in November, 1927 (pro rata to preferred and deferred stockholders) at 200 per cent. At 30 September, 1934 the amount of stock issued was £7,632,518, comprising £3,040,000 5 per cent. cumulative preferred and £4,592,518 deferred, the latter being transferable in £1 units of stock. There are no definite provisions in the Charters as to the specific rights of the preferred and deferred stocks in a distribution of assets. Borrowing powers on debenture are limited to £5,300,000 plus a sum equal to three-fourths of the nominal amount of any stock issued in excess of £2,320,000. Total debenture stock outstanding at 30 September last was £7,427,560, made up of £657,300 3½ per cent. perpetual, £830,260 3½ per cent. second perpetual, and £5,940,000 4½ per cent. redeemable 1943/72. In February, 1933, £6,000,000 of the last named stock was issued to provide part of the funds for redeeming £6,981,000 of 5 per cent. and 5½ per cent. stocks, the cash being provided from liquid resources.

For a number of years up to 30 September, 1931, satisfactory profits were made and good dividends paid, but in common with other shipping companies subsequent earnings have suffered from the effects of reduced world trade, competition and a reduction in freight and other charges. Until 1932 the annual reports of the P. and O. were not very informative; but in the last three years these documents have given much more information, including detailed profit and loss accounts and consolidated balance-sheets. Hence, the table of profits for the last ten years given below is divided into two sections—the first covering the 7 years to 30 September, 1931 and the second the three years to 30 September, 1934.

	Profit after Tax.	Pref. Div.	% on Deferred Earned.	Paid.
	£	£		
1925 ...	552,361	400,361	11.2	10
1926 ...	502,265	350,265	9.7	10
1927 ...	496,422	344,422	9.3	10
1928 ...	681,569	529,569	A. 12.5	12
1929 ...	702,037	550,037	12.0	12
1930 ...	605,439	453,439	9.9	10
1931 ...	428,237	276,237	6.0	6

All dividends paid free of tax.

A. On stock ranking for dividend, the issued deferred stock being increased by £1,000,000 during this year to its present amount of £4,592,518.

In each of the above seven years profits were struck after providing for depreciation and allocating substantial annual sums to debenture redemption fund.

As the next table shews, profits for the three years to 1933/34 were not sufficient to provide full depreciation on the fleet at the usual rate of 5 per cent. on original cost. In 1931-32 this charge was considerably reduced, while in 1932-33 and the past year it was necessary to draw on reserves for this purpose, and to meet preferred dividends.

	1932.		1933.		1934.
	£		£		£
Profit ...	1,707,839		1,519,659		1,447,880
Less Interest & Exchange ...	1,125,470		607,363		481,908
Profit before Depreciation	582,369		912,296		965,972
Less Depreciation, etc. ...	404,841		1,405,197		1,397,918
Net Profit or Loss ...	177,528	(Loss)	492,901	(Loss)	431,946
Less Transfer to Redemption Reserve ...	110,000		Nil.		Nil.
Balance ...	67,528	(Loss)	492,901	(Loss)	431,946
Add. Investment Profits ...	98,009		13,272		33,215
From Reserve	Nil.		656,971		550,000
Profit per Report	165,537		177,342		151,269

Profit on sale of shares in Wm. Cory & Son, £418,300, less additional depreciation of steamers set aside, £385,085.

A cursory examination of the last two balance-sheets summarised hereunder—does not reveal an impressively strong position. But when a detailed survey of certain items is made, the real strength of the Company is abundantly clear. In the case of steamers, originally costing £27,833,897, no less than £14,842,736 depreciation had been written off by 30 September last, or over £575,000 more than necessary to write off 5 per cent. per annum on original cost. At the same date, there was an unrealised surplus of £356,862 on British Government and other quoted investments with a market value of £9,516,990, against book cost of £9,160,128. Investments in subsidiaries were also conservatively valued. In the case of current liabilities, the actual trading figure was only £2,200,271, the balance of the large total being items not immediately payable, and comprising £2,962,687 loans, £9,246,515 due to subsidiary and associated companies, and £1,524,896 profit sharing deposits and staff fund. Compared with 30 September, 1932, the large increase in liquid assets resulted mainly from the sale of certain assets and the substantial holding of ordinary shares in Wm. Cory & Son, the well-known coal factors. Summarised balance-sheets for the last two years shew:—

Assets.	1934.	1933.
	£	£
Steamers, etc.	13,029,406	14,184,165
Freehold Properties ...	803,840	800,035
Investments—Subsidiaries ...	10,592,200	10,588,665
Other Companies	808,707	2,710,039
Liquid Assets	10,064,180	5,889,583
Total ...	35,298,333	34,802,485
Liabilities.		
Capital	7,632,518	7,632,518
Debentures	7,427,560	7,487,560
Loans, Creditors, etc. ...	15,934,369	14,827,790
Reserves	4,150,000	4,700,000
P. and L. Balance	155,886	154,617
Total ...	35,298,333	34,802,485

Turning to the consolidated balance-sheet of the whole group, a more impressive shewing was made

at 30 September last, liquid assets of £21,829,531, including marketable securities standing at £17,008,117 (market value £18,066,243), comparing with loans, creditors, etc., of £10,440,335. Steamers originally costing £83,629,961 appeared at £27,962,888, or £7,734,640 below the figure which they need have done so if depreciation at 5 per cent. only had been written off each year. In addition there were disclosed reserves and undistributed profits amounting to £21,196,079, apart from £2,143,122 similar items attributable to the ordinary capital of shipping subsidiaries publicly held. In view of this remarkable position it is by no means a disturbing factor that aggregate profits of the subsidiaries for the past three years have not been sufficient to provide depreciation on the fleets at 5 per cent. per annum on cost.

At the last annual general meeting, one large shareholder questioned the advisability of the directors pursuing such an ultra-conservative depreciation policy at the expense of deferred stockholders, when the disclosed reserves of the P. & O. group were sufficient to meet this charge for several years until conditions were brighter. As this question may meet with the favourable consideration of the Board during the current year, the position is worth careful analysis.

As shewn above, depreciation has been over-provided for in past years, while disclosed reserves and undivided profits of the P. & O. itself are sufficient to write down its own fleet to under £9,000,000. Taking the corresponding items of the entire group, the fleets could be written down to below £8,000,000, or well under £6,000,000 if the reserves, etc., belonging to outside shareholders were also used. Assuming reserves are used to provide depreciation, two alternatives are open—either to immediately write down the fleets by these amounts, and base future annual charges against profits on the written down figures, or to provide annual depreciation on the present basis, from reserves. Under the first method 5 per cent. depreciation on the parent company's steamers would require only £450,000 per annum on a valuation of £9,000,000, while the maximum charge for the whole group would be even lower at £400,000 per annum on the basis of an £8,000,000 valuation.

For 1933-34 P. & O. profits before providing for depreciation were £966,000, so that if only £450,000 had been necessary for depreciation there would have been left over £500,000 to meet preferred dividends and for deferred stockholders, or the equivalent of 8 per cent. on the deferred. As a 5 per cent. tax free dividend requires less than £230,000, it is possible, although by no means certain, that some such payment will be made for the current year, thus making the £1 deferred units an attractive lock-up at their current price of 17s. 6d.

Although earnings, after providing full depreciation, have not been sufficient in the past three years to cover combined debenture interest and preference dividends, all these stocks, in view of the strong position, can be classed as first rate investments giving good yields. The two 3½ per cent. debenture issues are quoted around 94 to yield approximately 3¾ per cent., while the 4½ per cent. debentures offer over 4¼ per cent. at 105. The 5 per cent. preferred stock yields 4¾ per cent. at 104. Interest payments are: 3½ per cent. debentures, 1 March and 1 September; 4½ per cent. debentures. 1 April and 1 October; 5 per cent. preferred, May and December.

THE WEEK IN THE EXCHANGES

CALCUTTA STOCK EXCHANGE

(By Our Correspondent)

Friday Morning, Feb. 15, 1935.

Business in the Stock Exchange was not of the same proportions as in the previous week. Due to the talk of general election in Great Britain and fears of a Labour Government giltedge had an unprecedented setback. The offerings by continental holders had been so heavy as to reduce the prices of Consols, War Loan and other leading scrips. 3½ per cent. India Sterling also suffered and prices fluctuated over a wide range. Indian giltedge was also adversely affected; and 3½ per cent. Rupee Paper fluctuated in sympathy and the stringency of the money served to accentuate the nervousness. Jute shares followed the securities market and business was moderate, while Coals were unchanged. Cottons and Teas remain neglected, whilst amongst Miscellaneous, Electricals and Paper Mills shares accounted for a fair turnover at steady rates.

Securities.—The week opened with 3½ per cent. paper round about last week's closing of Rs. 98-2. But the position in London, where political reasons and the confusion of the commodity markets had disrupted giltedge, reacted on India with terrific effect and 3½ per cent. Paper dropped as low as Rs. 96-2. On Thursday afternoon however, London advices were more cheerful and the intrinsically sound position here enabled the recovery of almost the entire ground lost within a few hours. The opening rate today was Rs. 98; but at the time of writing the rate was no better than Rs. 97-7. Other issues similarly lost ground until the mid-session on Thursday but the closing prices were about 8 annas per cent. lower than last. At the time of writing 1947-50 quoted Rs. 102-4; 1960-70 Rs. 110-1; 1940-43 at Rs. 109; 1945-55 Rs. 117-2.

Fixed Interest Bearing Securities.—Almost all Jute Mills Preferences were taken up by the market; but the rates were more or less unchanged. Adamjee 7½ per cent. Pref. were quoted at Rs. 129½; Agarpara at Rs. 133; Anglo-India at Rs. 150; Birla 7½ Pref. at Rs. 117½; Chitavalash 7 per cent. Pref.; at Rs. 132; Kamarhatty 6 per cent. Pref. at Rs. 133; Howrah 'A' Pref. at Rs. 140 and Standard 6 per cent. at Rs. 123. The only business done in this section was 5 per cent. Calcutta Port Trust 1957-87 at Rs. 115-4 and 5 per cent. 1956 Rangoon Port Trust at Rs. 120. Industrial Debentures were not taken up by the Market on Friday; but transactions were reported on Wednesday with Associated Hotels at Rs. 105, Bharat Sugars at Rs. 104; and Darjeeling-Himalayan (1916/46) at Rs. 100. Bengal Telephone Preferences had found buyers at Rs. 15-8 c.t.

Banks and Railways.—Central Bank shares had a spectacular rise to Rs. 43 but on profit taking closed at about Rs. 41-8. Imperial Bank Fully paids declined from Rs. 1,630 to Rs. 1,600 and Contributories from Rs. 410 to Rs. 400.

Darjeeling-Himalayan Preferences were done between Rs. 100-8 and Rs. 102.

Cottons.—Conditions were stagnant as before; and there are no features calling for comment. Bengal Nagpur quoted Rs. 18 and Dunbars recorded Rs. 133, and New Victoria at Rs. 1-12.

Coals.—Prices in this section were more or less unchanged. Bengals changed hands at Rs. 290; Amalgamated at Rs. 23-8 and New Bheerbhum round about Rs. 16.

The Mcneil group were a prominent feature; and in view of a dividend of Re. 1 being declared, Equitables advanced to Rs. 39-4 but closed somewhat easier at Rs. 38-12. Hurriladih which pays a dividend of As. 8 per share has been dealt upto Rs. 19 but it closed at Rs. 18. West Jamuria remains fully steady at Rs. 12-6 while Aldih fetched Rs. 4 and Mundulpore at Rs. 7-12.

New Manbhum were unchanged at Rs. 67 ; Sendra at Rs. 15-8 ; Standard at Rs. 30-12 while South Karanpura steadily appreciated from Rs. 5-4 to Rs. 6-8 which looks fully priced.

Jutes.—As stated earlier in this review, movements in this section synchronised with the fluctuations in giltedge values. The commodity markets ruled easier and this had its obvious significance to this section. The speculative counters suffered most and at one time Howrahs receded to Rs. 63-10 and Kamarhatty to Rs. 657 cum dividend. The closing was better with Howrahs standing at Rs. 64-4 and Kamarhatty at Rs. 650 ex-dividend. Fort Williams declined to Rs. 385 but recovered to Rs. 400 while Anglo-India, after touching Rs. 532, closed with buyers at Rs. 545. Barnagores dropped to Rs. 209 and Alliance to Rs. 445 to close at Rs. 218 and Rs. 458 respectively. Other bigger issues were more or less unchanged.

Among Rs. 10 priced stocks, Clives quoted Rs. 37-2 at a decline but closed at Rs. 38 ; Agarpara at Rs. 26-8 ; and Adamjee at Rs. 16-8.

Sugars.—Raza Sugars were very steady and continued in demand upto Rs. 165. Bulan sugars also had buyers at Rs. 13-4. Other issues were inclined to sag. Cawnpore Sugars were no better than Rs. 36-12 ; Champuran were marked down to Rs. 22 while Samastipore had sellers at Rs. 11 and Ryams closed at Rs. 37-4.

Engineering.—Engineering shares were in fair demand ; but rates are rather sticky. Indian Irons were quiet at Rs. 7-12 ; but Bengal Iron were unchanged at Rs. 4-10. Burn & Co. declined to Rs. 305 ; Braithwaites quoted Rs. 8-14 c.t. and Arthur Butler at Rs. 14.

Public Utilities.—There was a very steady demand for Electrics ; and a fair business resulted in many of the prominent scrips. Bengal Telephones quoted Rs. 18-14 ; Cuttack Electrics changed hands at Rs. 9 ; Muttra at Rs. 11-4 ; and Mirzapore at Rs. 7-12 and Rs. 8. Benares Electrics closed at Rs. 15-4 Jubbulpore at Rs. 13-4 and Ajmer at Rs. 8-12.

Miscellaneous.—This section was featureless, except for Paper Mills shares. Bengal Paper continued steady round about Rs. 107 while India Paper Pulp fetched Rs. 191. British India Corporation changed hands at Rs. 2-15, Brittania Biscuits at Rs. 9 and Indian Wood Products at Rs. 34 ex-dividend.

A solitary deal was reported in Indo-Burma Petroleum (ordy) at Rs. 102. Burma Corporation quoted at Rs. 6-2 on Thursday opening and closed easier at Rs. 6. United Flours accounted for a deal at Rs. 10-8.

Teas.—The activity in this section was very limited and there were more sellers in majority of instances.

Arcuttipore quoted Rs. 15-4 ; Hansqua Rs. 9-8 ; Hantapara (ordy.) Rs. 405 and Lackatoorah Rs. 12-4.

Rubbers.—There is very little change to record in this section.

BOMBAY STOCK EXCHANGE.

(*By Wire*)

(FROM OUR CORRESPONDENT)

Bombay, Friday Evening

February 15, 1935.

Money Market: Money was tight at the beginning of the week with interbank call quoting at 4 per cent. though closed easier at the end of the week with Call Money quoting 2½ per cent.

Exchange: Market ruled steady with Banks selling T. T. at 1s. 6 5/32d. for cash deliveries ; 1s. 6 9/64d. for near position: 1s. 6 1/8d. for Mid March ; 1s. 6 1/32d. for early April ; 1s. 6 1/16d. for early May ; 1s. 6 1/32 for June ; 1s. 6d. for July December. Banks are buying 3 months bills at 1s. 6 7/32d.

In sympathy with London giltedge market, Rupee Securities remained easy though at the close improved on the strength in Sterling advices, 3½ per cent. though touched the low level of Rs. 96, was done as high as Rs. 97/13 and closed slightly lower at Rs. 97/6. 45-55 were lower at Rs. 116/14 ; 60-70 at Rs. 109/12 ; 1941 at Rs. 100/15 ; 47-50 at Rs. 101/15 ; 1943 at Rs. 105/15 ; 55-60 at Rs. 117 ; 1935 at Rs. 101/2 ; 39-44 at Rs. 107/12 ; 40-43 at Rs. 109 ; 38-40 at Rs. 108/6 ; Bombay Development at Rs. 102/1.

Shares: Throughout the week, the market was erratic though the general tendency was a little bearish in sympathy with London markets and our Rupee securities market. At the close, the market improved and would have maintained the same level but for the reports of dividend declaration by some companies not coming up to market expectations.

Textiles: Textiles have been steady with minor fluctuations though the prices were lower than the last week's closing. Colabas which were around Rs. 165 closed at Rs. 158/2. This company has declared Rs. 4 dividend for the year ending December 31, 1934. It is reported that this company have declared a dividend of Rs. 8. Gokaks were lower at Rs. 230 ; Bombay Dyeings slightly easier at Rs. 965 ; New Greats lower at Rs. 208/12 ; Swadeshis closed at Rs. 255 ; Indian Bleaching remarkably steady at Rs. 170 ; Century at Rs. 318/12.

Hydro Electrics: Fluctuations in Tata Powers were erratic with prices moving up and down within a range of 100 points. Powers were done as high as Rs. 1,755 but were beared down at close to Rs. 1,635 on false rumours that the company has declared only Rs. 10 interim dividend against market expectation of Rs. 20. We hear that the Company has declared an interim dividend of Rs. 15 per share. We still feel that Power shares are much overvalued even at current price of Rs. 1,647. Andhras remained easy throughout the week and closed lower at Rs. 1,775, and we prefer liquidation of holdings in Andhras at present level. Tata Hydros are at Rs. 179/6. Hydro and Andhra Valley Companies have declared interim dividends of Rs. 3 and 30 free of tax respectively.

Iron & Steel: Even though other sections of the market were quiet, Steels were remarkably steady with minor fluctuations. Tata Ordinaries after touching Rs. 151, the highest, and Rs. 144 the lowest closed steady at Rs. 147 seems to be a good enquiry for this around Rs. 145. Deferreds moved between Rs. 660 and Rs. 690 and closed at Rs. 660. Second Preferences were slightly easy at Rs. 171. In view of the excellent working of the company we continue to feel that Ordinaries ought to move up.

Cements: Cement shares were easy on account of heavy selling by a prominent party. Bundi closed at Rs. 39/14 ; Gwalior at Rs. 126/4 ; Indian at Rs. 422/8 ; Katni Deferred at Rs. 1,410 and Ordinary at Rs. 388/12 ; Okha at Rs. 222/8 ; Punjab (ordinary) at Rs. 27/4 ; Shahabad at Rs. 387/8 ; and United at Rs. 81.

Miscellaneous: Bombay Burmas after touching Rs. 440 closed at Rs. 422/8 and New shares closed at Rs. 132/8. Belapurs were steady at Rs. 287/8 ; Trams were lower at Rs. 170 ; Petrols on good enquiry quoted around Rs. 4 ; Scindias were lower at Rs. 12/9 ; Telephones at Rs. 117/4 ; Tata Constructions have eased down to Rs. 85/4 ; this company has issued 10,000 Preference shares of 6¼ per cent., Rs. 100 each ; of which 4000 shares are offered to Public for subscription till the 18th inst.

Banks & Insurance: Bank shares were slightly easier at close, with Imperial Bank fully paids at Rs. 1,603/12 ; Partly paids at Rs. 402/8 ; Bank of Baroda steady at Rs. 107/12 ; Central Bank better at Rs. 42 ; Bank of India at Rs. 123 and Union at Rs. 6.

New India Assurance were steady at Rs. 48/8 ; Oriental higher at Rs. 4,750 ; Vulcan at Rs. 8/2.

MADRAS STOCK EXCHANGE

(By Wire)

(From Our Correspondent)

Madras, Friday Noon,

February 15, 1935.

The Securities market which closed fairly firm last week took an expected turn during this week. Owing to the pepper repurcussions on the London Stock Exchange and the consequent fall in India Sterling Paper operators in Bombay, the operators became nervous and heavily sold and Paper fell sharply by Re. 1 on Monday to Rs. 97. The market touched on Tuesday Rs. 96 but closed nearly a rupee higher at Rs. 97. The Paper again improved yesterday and the closing being Rs. 97-14 though the felling of nervousness owing to the overbought position is not yet over. The other long-dated issues suffered sympathetically with 4 per cent. 1960-70 Loan falling to Rs. 109-14 and 5 per cent. 1945-55 at one time being offered down to Rs. 116-13. There was no enquiry for other bonds either for medium-dated or short-dated.

Amongst Mysore Loans 4 per cent. had a sharp set-back to Rs. 109-10 whilst others in the absence of business could not be gauged correctly. There were no transactions in Port Trust and Municipal Debentures but amongst Joint Stock Company Debenture issues, Cochin Malabars were done at Rs. 104. The Preference share market was steady with Premier Hosiery Preferences done at Rs. 10-12 and Spencer & Co. 'B' Preferences at Rs. 13 as also Tata Second Preferences at Rs. 171.

Banks.—Bank shares were steady. Imperial Banks at one time touched Rs. 1,640 but fell back in sympathy with the giltedge market to Rs. 1,605 for fully paids and Contributories did not show much change. Central Banks were a feature rising to Rs. 43-8 but closed quieter at Rs. 4-8 cum dividend. Indian Banks were done at Rs. 130 and Rs. 25 cum dividend for the big and small shares and later on improved to Rs. 135 and 27½ ex-dividend. Indo-Commercial Banks were in persistent request with good buyers upto Rs. 115.

Public Securities.—Telephones and Electrics were in good demand. Ajmer Electrics were taken up at Rs. 11½ and Trichy Srirangams at Rs. 220. Several lots of Vellores at Rs. 13¼ as also West Coast Electrics at 8 annas premium.

Sugar.—Sugar shares showed some improvement with Deccans small done at Rs. 75 and Mysore Sugars at Rs. 27-4. With further buyers at this price Deccan Sugars both big and small shares appear attractive owing to the approach of the dividend.

Mills.—Mill shares were barely steady with Buckinghams and Carnatics done at Rs. 212; Cambodias at Rs. 13-8 and Premier Hosidery Works at par.

Planting.—In the planting section beyond deals in Persia Karamalais at Rs. 39-8 and buyers for Vellamalais around Rs. 9½, the market was dull. Rubbers were featureless.

Miscellaneous.—In the miscellaneous section, Tata Steels again held field and the ordinaries after rising to Rs. 155 fell to Rs. 147½ whilst Deferreds touched the low level of Rs. 682½. Both issues closed weaker at Rs. 145¼ and Rs. 662 for the Ordinaries and Deferreds respectively.

LONDON STOCK EXCHANGE

The Stock Exchange during the week under review has been dull and overcast by the difficulties in the commodity markets. The failure of Messrs. Strauss & Co., and the difficulties with regard to pepper have caused great nervousness and panic and there was heavy selling. The giltedge market was particularly low on Wednesday; 3½ per cent. Indian Stock 1931 was quoted at 96. But it recovered and on Thursday a much more cheerful tone prevailed and giltedge made a good recovery and were quoted higher all round. Among other sections Home Rails were better earlier in the week but the general slump of the market affected these also. On Monday Great Western Ordinaries were quoted at 55 and L. M. S. ordinaries at 19¾. On Thursday they were quoted at 52½ and 18½. Teas and Rubbers were unchanged. Several advances were recorded the same day in Oils, Burmahs, Shell Transport and Royal Dutch being marked higher. Industrials were irregular.

NEW YORK STOCK EXCHANGE

Though Wall Street is anxiously awaiting the decision of the Supreme Court, the recent promise made by the Secretary of the Treasury to maintain a steady dollar through the operation of the stabilisation fund seems to have had a reassuring effect. As mentioned before till Supreme Court gives final decision, the market is likely to rule dull and irregular.

The operating capacity of Steel industry for the last week of January was 56 per cent. Of late, Steel stocks have been receiving better support and favourite of the group seems to be Bethelhem in which buying was reported to be of good character. Motor shares also were well supported in the market, hence the purchase of General Motors, Chrysler and Ford of Canada are advocated at current levels. Of the aviation accesory stocks, we continue to think well of Bendix and Sperry. In view of considerable optimism for chemical industry in United States this year, American Cyanamid 'B' stock at current level of 17 dollars seems attractive. There has been good inside buying of this stock recently.

United Steels Corporation is working at 48 per cent. of their capacity. Brokers loans are up by 30 million dollars.

SETBACK UNDER ADVERSE PRESSURE

RECOVERY SHOWS INTRINSIC STRENGH

BRIGHTER INDUSTRIAL NEWS

By R. GORDON CUMMINGS.

By Air Mail

Special for "INDIAN FINANCE"

London, 5 February, 1935.

The stock exchange has had to contend with several adverse developments during the past week, but considering the uncertainty brought about by political events, the failure of Strauss & Company, doubts as to the result of the American "Gold Clause" decision, and the sharp set-back in Australian gold shares, together with currency fluctuations, it tends to prove the strength of markets that very little change is shown on balance. Matters were also not helped by falls in gilt-edged stocks on Tuesday and Wednesday, and the commencement of dealings in several new issues at a discount. While gilt-edged stocks are lower on the week, they close much above the worst.

Foreign bonds have provided a few features, especially Brazilian stocks, but Home Railways have again been weak on disappointment with the traffics. Even insurance and bank shares were affected temporarily by the general unsettlement.

There is nothing much to report in Industrials, activity having been confined to minor sections, particularly the shares of *Bairds Television,* and *Electric and Musical Industries* on their interests in television. Tobacco shares are little changed, but *London Brick* are slightly easier at 84*s.* 3*d.* Newspapers shares remain firm.

In the more speculative sections, oil shares, after falling sharply, have since steadily recovered to practically the closing levels of the previous week. Kaffirs were somewhat uncertain on Tuesday and Wednesday, but on renewed investment support, some very substantial rises have been witnessed, *Crown Mines* in particular reaching a new high record of £14½ for the 10s. shares. Australian gold shares discussed later have fallen sharply, *Commonwealth Mining* dropping 6s. in one day on a disappointing cable. Copper issues remain practically unchanged, but following speculative selling towards the end of the account, in shares eased slightly. At the time of writing, however, a marked recovery is in progress.

Investment Stocks and the Future.

The cause of the recent weakness in gilt-edged issues is rather difficult to trace ; but in my opinion it can be attributed to selling on the part of small investors taking their profits together with a decided falling off in buying on the part of insurance companies and other financial institutions. When it is remembered that the British insurance companies must have at least a matter of well over £2,000,000 to invest each week, any sharp reduction in their demand for gilt-edged stocks is bound to lead to a weakening in prices. It is now generally understood that some of the leading insurance companies have been heavy buyers of the established dividend-paying gold mining shares, thus explaining the sharp rises in certain Kaffirs.

With the gilt-edged market in such a state, it was not surprising that the new *Australian* 3¼% 1956/61 loan opened at ¾ discount and that underwriters of the £1,000,000 *Blackburn Corporation* 2¾% stock were left with 97% of the issue. In the latter case dealings started at 1½ discount ; but there has since been a recovery to ¾ discount. The recent conversion issue of 3% debentures by the *Gas Light and Coke Company* was more successful, dealings commencing at par. As the *Australian* 3¼% stock can now be bought at under par, an exchange from 3½% *War Loan* is worth consideration.

Canadian Municipal and Provincial stocks have been very weak on threats that the City of Vancouver is to cut interest rates by 50%. On this announcement, dealings in all the City's bonds were suspended. Strong recommendations are to be made on behalf of bondholders to the responsible authorities.

Turning to industrial prior changes, there is a decided shortage of stock, and in many instances it is practically impossible to buy more than a few hundred pounds' worth of stock. Sometimes jobbers refuse to quote a price and in certain cases dealings are almost a matter of negotiation.

New Issue Statistics.

For the time being the new issue market is showing signs of drying up. It is understood that several loans on behalf of Corporations are being postponed until the market has had time to digest stock left with underwriters in certain recent cases. This is all to the good and if a tighter control is kept on the issue of first class stocks there will soon be a rally in gilt-edged.

Particulars published this week showing the number of new issues and the amount thereof made during January, disclose an increase of £42,150,000 over the figures for January, 1934. In January 1935 nine municipal issues were made for an amount of £42,719,000, compared with eight issues for an amount of £20,832,000 in January, 1934. The other main increases were in industrial companies, 38 of these raising £27,862,000 capital last month, against 26 companies and £9,654,000 a year ago. Another interesting development was an increase of over £2,000,000 in the capital raised by financial companies, these institutions having taken the opportunity of issuing debenture stocks at prevailing low rates of interest.

Speculation and Investment.

During recent months it has been shown, time and time again, that the slightest sign of trouble—political, financial, foreign or otherwise—has caused temporary or even extended unsettlement in stock markets. In practically every instance, however, subsequent recovery has set in, followed by fresh bursts of speculative buying. Another noticeable factor on many occasions of late has been a steady drop in the prices of speculative issues, two, three or even four days before the end of each stock exchange account. These falls have been mainly due to selling on the part of short term speculators, who either have not the funds to take up their commitments, or who feared that carry over facilities to the ensuing account would not be available.

Another additional factor, also traceable to nervousness, has been the promptness with which jobbers have sharply marked prices down on the slightest signs of any trouble. While this is certainly a sound businesslike policy to adopt, it does tend to make the position worse for the time being.

Talking the matter over with one of the leading brokers the other day, he said "If only all stockbrokers would get together to cut out carry-over facilities life would be much easier, although my profits would suffer. I would, however, sooner see my commissions halved and know that all my orders would be paid for than make large profits and have

the worry of advising clients whether to cut losses or contango stocks." While, perhaps rather stringent, my friend's remarks are certainly worth consideration. Experience during recent months has shown that speculators with sufficient money to finance their purchases have fared considerably better than the quick turn operators, who scamper to cover on the least signs of trouble. By this I do not by any means advocate the total elimination of speculative facilities or the continued holding of shares which have little hope of eventually showing a profit, but I do advise all speculators before buying shares with reasonable possibilities to be in a position to take up and pay for their commitments. *Experimenta docet* and "Be Prepared" should be the watchwords of speculators.

Brighter Industrial News.

Several very encouraging announcements and reports have been published during the week. Before dealing with these I would, however, like to draw attention to some of the remarks made by Sir Henry P. Burt, the Chairman, at the meeting of *Bengal and North Western Railway*. While Sir Henry was not too optimistic regarding prospects for the immediate future, he stated that the earning power of this railway was as good as ever. Although he expected that expenditure would have to increase, owing to the cost of restoration work provision for rolling stock renewals, he hoped that earnings in the future would not be unsatisfactory, particularly as there now appears to be an improvement in the general economic position. Bengal and North Western ordinary stock can be bought at 296 to yield over 5⅜%. I consider it to be a good investment.

Beer and Rayon.

Figures have now been published showing the output of beer in Great Britain and Northern Ireland for 1934, production being 15,621,241 standard barrels, or an increase of 1,307,000 over the production of 14,314,232 barrels in 1933. Another satisfactory feature is the fact that during only three months—May, August and September—was there any reduction in the monthly output compared with the corresponding months of 1933.

Coincident with the publication of these figures, *Meux's Brewery Company* announce a sharp increase in 1934 profits, these at £148,387 being £35,231 higher than those of 1933. The dividend on the £1,037,760 ordinary capital is increased to 11% for the year, against 9% for the whole of 1933, and after allocating £20,000 to property improvement reserve, together with £5,000 to superannuation fund, compared with nothing a year ago, the carry forward is increased by £14,030 to £286,793. As earnings are considerably in excess of the dividend, the £1 ordinary shares are a promising investment, yielding 4½% at 49s.

Some dissatisfaction was shown at first with the interim dividend announcement of *Watney Combe Reid,* the big London brewers, as the payment is merely maintained at 5%, as in 1934. In view of the ultra-conservative financial policy of this company this is no indication that profits for the current year will not show considerable expansion. In fact, I fully expect that the final dividend will be at least 10%, or 12% higher than that of 1934. On the slight set-back in the £1 deferred ordinary units to around 72s. 6d. a good buying opportunity is offered.

Satisfactory proof that the Rayon industry is doing better is furnished by output statistics in respect of 1934. British rayon production for last year reached a high record of 93,100,000 lbs., or an increase of 9,000,000 lbs. over that of 1933. While output of acetate silk disclosed a sharp decline, viscose production increased by roughly 12%. On publication of these figures, *Courtaulds* ordinary shares recovered sharply to 50s., while *British Celanese* second preference rose further to 17s. 6d. Courtaulds are well worth buying as a lock-up.

Other Satisfactory Announcements.

Turning to the heavy industries, I am pleased to note that the *Bolsover Colliery Company* is paying a total dividend of 8% for 1934 against 7% in 1933, this being the highest dividend paid since 1926 when 15% was distributed.

Eastwoods, the brick, cement and building material company, have issued an interim report stating that production and trading has continued satisfactory. As already announced, the interim dividend is doubled at 5%. I can still recommend the £1 shares at 55s. 6d., together with *London Brick,* now 84s.

In recent weeks, there has been a number of brick and allied companies floated; but in view of the rapid increase in competition in this industry, I advise careful discrimination. Readers of *Indian Finance* should mainly confine their attention to the leading shares such as the above, although one or two of the newer issues are worth considering.

Floated in December last, *S. G. B. (Dudley)* appears to be a company with a promising future, as its principal manufacture is a specialised form of glazed brick. The prospectus showed satisfactory profits in the past. In view of the yield of 5⅜%, the 6% £1 preference shares are a reasonable investment at 22s. 6d., while the 5s. ordinary shares have speculative possibilities at 6s. 6d.

Another pleasing announcement was that of *Borax Consolidated* which is resuming dividends with a payment of 2½% on the ordinary and 6% on the £5 preferred ordinary shares. No payment has been made on the £1,150,000 deferred capital since 7½% for the year to 30 September, 1928, and nothing has been distributed on the preferred ordinary, which are entitled to a non-cumulative 6%, since 1929. The deferred shares have risen sharply to 15s. 6d. and the preferred ordinary to over £5.

Fleming Reid & Company (worsted spinners and retailers) recommend an increase in the 1934 distribution to 17½%, as against 16¼% in 1933.

Capital increases.

The *General Accident, Fire and Life Assurance Corporation* is offering shareholders an additional 50,000 £5 ordinary shares which will be 25s. paid up at £18 15s. each. This represents one new share for every seven held, and as the old shares are quoted at over £21 a small bonus is involved. The new shares will not rank for the final dividend in respect of 1934.

While definite details have not been published, it is generally understood that negotiations are practically completed for the purchase of the Hercules Cycle and Motor Company by Raleigh Cycle Holdings. The Hercules Company, a private concern controlled by Mr. E. F. Crane, is one of the largest manufacturers of bicycles in this country. As the Raleigh Company propose increasing the authorised capital by £2,250,000, in 1,000,000 preference and 1,250,000 £1 ordinary shares, it is assumed that this is the approximate purchase consideration. On the present market price of 43s. 6d. for Raleigh ordinary shares the purchase consideration will have a value of around £4,000,000.

Property and Finance Companies.

During the last two years a large number of property companies have been floated. While certain of these concerns have good prospects, I much prefer investing in the stocks of the older established companies. Many of the latter have suffered in recent years from a reduction in rentals, but with the present increased spending power of the British public and greater business activity, I fully anticipate recovery in profits in the near future.

Amongst the best selections are *Metropolitan Housing Corporation* £1 ordinary units yielding 5% at 32s. 6d., *London County Freehold and Leasehold Properties* £1 ordinary units yielding 4½% at 49s., and as a speculation, *Associated London Properties* £1 ordinary shares at 15s. 6d. No dividend was paid on the last named shares for the three years to June, 1934; but in respect of the current financial year an interim of 1½% has been distributed. This company's 6% preference shares are also worth attention at 22s. 6d. on the yield of 5⅓%, while the 5% first mortgage debentures are a splendid investment at 104½, to yield 4¾%, especially as redemption cannot take place at below 102½%.

Turning to the finance companies, many of these have benefited from the increasing activity in the new issue market. One of the leading concerns—*Charterhouse Investment Trust*—takes a prominent part in the floatation of soundly established industrial companies. For the year to 11 November 1934 profits showed remarkable expansion and the dividend was increased from 6¼% in 1933 to 7½%, plus a bonus of 2½%. On a 10% dividend basis the £1 shares yield over 6% at 33s.

Another company now taking a large interest in public issues is *Tobacco Securities Trust,* which is controlled by the British American Tobacco Company. Only last week it was announced that a subsidiary of Tobacco Securities—Dean Finance—had taken a hand in assisting with the straightening out of the present difficulties in the shellac market. This appeared to cause dissatisfaction in the market as the £1 ordinary units fell to 4¾% and the deferred units to 5¾. At anywhere round these prices both are worth picking up.

In a previous issue, I stated that there was every likelihood that *Birmingham and District Investment Trust,* which controls a number of motor omnibus companies, would redeem the existing 6% preference shares. The report for 1934 confirms this forecast and shews that profits have increased by almost £37,000 compared with 1933, the net figure for 1934 being £188,996. After again paying 7½% on the £1,119,560 ordinary capital the undivided profits account is increased by £37,856 to £126,418. In addition to its interests in omnibus undertakings, the company has a diversified and extensive list of general investments, thus almost making it an investment trust. Another company under the same management, *Tilling and British Automobile Traction,* also announces a gratifying increase in profits during 1934, the net amount earned being £276,877, against £235,264 in 1933. Despite this the dividend on the £2,000,000 ordinary capital remains at 10%. Although Birmingham and District Investment ordinary shares yield just over 4% at 37s. I can recommend them, both for capital appreciation and increasing dividends.

Gold Shares

As I have pointed out earlier in these notes, there has been a persistent demand for the shares of the leading Kaffir dividend paying gold mines. The available stock in the market is very limited as inside interests are not sellers. I fully expect, however, that even should the "Gold Clause" decision, expected next week, be unsatisfactory, this will only have a temporary effect on the gold mining market. It now appears to be generally recognised that a fair price for gold should be somewhere between 140s. and 150s.

The market was helped on Friday last by publication of the January profits of most of the leading companies. For the first time on record the output is valued at 141s. per ounce, and in most instances satisfactory profit increases are disclosed. A further helpful factor has been the revaluation of ore reserves by a number of companies, these again showing increases.

While there may be temporary uncertainty in the gold shares during the next month or two, I can recommend a purchase of *Johannesburg Consolidated Investment* (yielding 5-1/3% at 75s.), *Consolidated Mines Selection* 10s. shares, now 35s. 6d., and amongst the producing companies, *Robinson Deep B* 7s. 6d. shares, now 52s., and *Simmer and Jack* 2s. 6d. shares, now 12s. 9d. Both the latter are developing properties with distinct prospects.

The semi-panicky dealings in *Commonwealth Mining and Finance* shares on Wednesday night followed the receipt of a cable stating that two bore holes disclosed practically no gold below the water level. This cable cannot by any means be taken as conclusive, as it is impossible to state whether gold exists below the water level until more drilling has been done. In certain quarters satisfaction was expressed with the sharp fall in the shares as this was successful in upsetting a large bull account. The shares should not be parted with at present price of 9s. 6d., which goes against 17s. 6d. two weeks ago.

Protecting Shareholders

While it is my avowed intention and purpose to recommend to readers of *Indian Finance* only shares in soundly established and well-managed companies, I would point out that even the best of us may at times make mistakes—mistakes beyond our control owing to the management of a company falling into either dishonest or incompetent hands. I should think I am right in surmising that there may be a number of my readers holding shares in companies, the management of which they are dissatisfied with.

On Thursday last I attended the second annual meeting of the *Shareholders' Protection Association,* which has done very valuable work in its short life of two years in fighting for the interests of investors. In 1934 alone it was instrumental in having amended a number of schemes unfavourable to debenture holders and preference shareholders, while in other instances, it was through the influence of the Association that committees of shareholders were appointed to investigate the affairs of badly managed companies. The subscription to the Association is only the nominal one of 10s. per annum, and I advise all my readers in their own interests to write for further particulars to the Secretary, Mr. John Wilmott, M.P., 78, New Oxford Street, London, W.C.1.

Market Pointers

There has been some good buying of Press Caps 5/- ordinary shares this week at up to 6s. 6d. I understand that the Company, which manufactures working machines and water softness, and deals in patent air-tight closures for all kinds of bottles, tins, etc., is doing so well that orders are having to be turned away. Recently the issued ordinary capital was increased by £26,000 to £91,000, but for the year to 30 June last 16% was earned and a 7½% ordinary dividend paid. There is good scope here for capital appreciation.

With the beginning of the new Stock Exchange Account there has been a revival of interest in tin shares. Previous recommendations are still worth buying together with London-Nigniar Tin 5s. shares, now 8s. 4½d. and *Rawang Concessions* £1 shares at anything up to 27s. 6d.

Efforts are being made to put the West African gold market better. In due course, this will be successful, and some useful rises should be seen. *Ashantis* are still the safest purchase, but for the speculator I advise *Aristons* now 12s. 6d., *Atta Gold,* now 7s. 3d., and *Marlu Gold Mining Areas* at around 13s.

From a well-informed source, I am told to buy *African and European Investment* £1 shares at any price up to 46s. This gold mining finance company has wide-spread interests, many of which are benefitting from the higher price of gold. For the year to 31 December, 1933, 7½ per cent. dividend was paid, but so far on account of 1934 a 5 per cent. interim

has been distributed. The next report, due in May, should disclose a satisfactory increase in profits.

Certain interests are very optimistic regarding the current trading position of *Dubilier Condenser*, which manufactures condensers and other electrical equipment. Following a drastic capital reduction in 1933, profits for the year to 31 March last shewed satisfactory improvement, almost 24 per cent. being earned on the ordinary capital, against 10 per cent. paid. Further expansion in earnings can be looked for during the current year, so that the 1s. ordinary shares are an interesting speculation at around 1s. 9d.

Rhokana Corporation, the large Rhodesian copper producing company, has done very well during the half-year to 31 December last, profits being estimated at £128,000 after providing for all charges and depreciation. As annual requirements are only £82,500 gross to meet the 5½ per cent. preference dividend, these shares, as previously recommended, are a sound investment at 22s. ; the yield is 5 per cent.

THE BOURSES IN AIR MAIL WEEK

Paris

The Bourse had a better start during the week, the markets being impressed favourably with the Chamber debate on financial affairs. On the Parquet the decline in Rentes was checked ; and government issues showed an upward trend. But later the sudden and sharp appreciation of the dollar created a nervous feeling of instability in the exchanges. Operators were loathe to take what they considered to be risks and government issues had a slight setback. But later when it was found that the Bank of France had lost no gold, the nervousness abated. Scrips were absorbed more readily ; and Rentes resumed the trend of the earlier part of the week. Bank shares improved in the wake of giltedge. Industrials met with better support on a growing appreciation of how industry might benefit from the abandonment of the policy of deflation and the Government's efforts to reflate. But in the setback caused by the spurt in the dollar, all sections were equally involved. But equally with the return of confidence, other sections, in common with giltedge responded. Industrials met with greater support. Chargeurs Reunis advanced from 142 to 155 and Raffinaire Say from 2,280 to 2,345. Rio Tintos were in demand and Central Mining were 16f. better at 1640. There was a greater interest evinced in the gold mining shares which had a setback owing to the exchange disturbance. Crown Mines advanced from 1058 to 1093 and Sub Nigel from 937 to 952. Among oils Shell Transport improved from 194½ 198. Among Foreign Loans 5½ per cent. Young Loans improved from 406 to 419½.

Berlin

The Bourse during the week under review has been active and there was a better tone prevalent in most of the sections. Banks were the noteworthy feature and gains were recorded day-by-day through out the week. For a time, there were rises in shares other than Reichsbank but during the middle part of the week Reichsbanks also improved. On January 29, Reichsbanks advanced to 163, and the improvement was maintained on the next day when it was quoted at 164. Among other banks Berliner Hendelsbank was important, being quoted at 111½. Industrials were good with Farbenindustries up by ¼ to 143.10 and Fords up by 1¼. Electricals were better with Siemens recording a rise to 146½. Rayons showed an improving tendency and Shippings were good.

WALL STREET IN AIR MAIL WEEK

GOLD CLAUSE CLOUD OBSCURES OUTLOOK

RESULTS OF STEEL COMPANIES

By F. Rocke

January 31, 1935.

Another dull session has resulted from the bogey of an adverse decision of the Supreme Court in the Gold Clause case which has still hampered the trade in Wall Street. This inactivity may be expected to continue so long as the Supreme Court delays its verdict and no movements of any importance are likely to develop before the announcement of the decision. It is interesting to speculate on the reactions of the decision on the markets. If the verdict should go against the Administration, there may, in all likelihood be no adverse effects, as such effects have already been, in large part, discounted. Already operators have completely retired from the market. They have taken the warning sounded in the days of the panic and the decision might well prove to be a damp squib. It is only understandable that the excellent current business news which would normally have sent up the price of stocks to high levels, has practically had no effect. There is a rumour that the Gold Clause decision will be delayed, and it is rather a pity that the stock markets should be subjected to this protracted suspense. Apparently, the Supreme Court is impressed with the supreme importance of the issue. It is thought that the Court will announce the decision before it closes for the holidays.

President Roosevelt is busy holding discussions as to how to meet an adverse decision. According to a semi-official announcement, stock exchange officers have been recently debating whether or not to close the exchange for a short period after the decision is announced. There is the precedent of the London Stock Exchange closing down when England went off the Gold Standard. There may be a similar closing down now ; and official circles would welcome it since it would prevent any hasty and ill-considered damage to the structure of security values.

As it is, price movements are narrow. There were some transactions in entertainment shares owing to the reports that a banking syndicate had agreed to underwrite the financial requirements of the reorganisation plan of the Paramount Studios. Railroad issues were especially weak following the publication of Eastman's Report. Steels were somewhat higher. There was some reaction in Preferreds. Aviation shares were the feature on the last day of the week under review, considerable bullishness being imparted to them by the Aviation Commission's recommendations.

The Bond market was irregular. Government and other giltedge issues were reactionary. There was a lessening of confidence ; and investors were disinclined to buy heavily at present prices. Treasury issues were slightly lower and Municipals lost by small fractions. Foreign issues were generally steady. Chicago, Northwestern and Missouri Pacific rose sharply on the expectation that the R.F.C. would use its new powers to assist the reorganisation of these new companies. Speculative issues were firm.

Railways have absorbed the attention of the week. Various causes have caused the selling pressure and the extreme weakness in Rail stocks. The Administration's rail legislation plans have been

completed by Mr. Eastman ; and they are not quite palatable to the Railway Companies. Congress is inclined to offer the weaker roads nothing but the unpleasant alternative of reorganisation or receivership. They are opposed to any broad programme giving further financial aid. Though they do not like the idea of a transport dictator, the railway companies have got to put up with it owing to the chaotic condition of the railroad industry.

Mr. Eastman's plan for establishing coordinated control of all forms of transport aims at relieving the railroads, from the burden of unfair competition and at placing taxation on a more equitable basis. Although the proposals are intended to reduce operating expenses, disappointment is felt at the faith in increase in passenger traffic sufficient to improve income. It is strongly felt in Wall Street that the greatest need of the railroads is a substantial increase in foreign traffic, while the prospect of a Government agency exercising dictatorial powers over the railroads over an indefinite period is viewed with distaste.

The outlook for the oil industry is anything but gloomy. The adverse factors need not be regarded seriously because the price position is favourable. The American oil companies are fairly fed up with the rate war and prices have been restored to more reasonable levels. Something like normal prosperity will be restored to the oil industry if American gasoline prices are advanced during the Spring.

Chalmers manufacturing company is one of the companies which should benefit from a revival in the heavy industry. The company manufactures heavy machinery and electrical equipment of many kinds such as cement and crushing machinery, steam, gas and oil engines and farm and industrial tractors.

The capital is composed of $13,858,000 5 per cent. Gold Debentures and 1,32,7888 shares of no par common stock. The depression had its toll but last year the slight improvement in earnings was continued at an accelerated rate. In the first three quarters, there was a deficit of 68 c. per share of common stock against a deficit of $1.58 in the corresponding period of 1933. Unfilled orders on September 30 totalled $8,492,321 against $5,873,753 a year earlier. At around 16 the stock may be recommended as a long-term recovery purchase and this company should benefit by an improvement in the heavy industry which must follow the inevitable movement for the replacement of obsolete equipment.

The Proctor and Gamble company issued its report for the last quarter of 1934 ; and it is noteworthy for the encouraging earnings. The company manufactures soaps, candles and oils and foods produced from vegetable fat. It has outstanding $10,400,000 4½ per cent. gold debentures, $2,250,000 8 per cent. $100 par Cumulative Preferred stock $17,156,900 5 per cent. $100 par preferred stock, and 6,410,000 shares of no par common stock. The financial position is sound and dividends are maintained at the rate of 27½ c. The stock stands at 1934-35 high (45) and is one of the very few that have resisted the present weak tendency of the market. This in itself is sufficient testimony of the possibilities, when normal conditions are again restored.

With the greater prosperity and reorganisation of the Railroad industry the companies manufacturing airbrakes are sure to be benefited. The American Railway Association insists that all freight cars should be fitted with air breaks. This was ignored by various railways owing to the fall in earnings ; but it will be taken up as soon as finance permits. It is bound to have a beneficial effect on the profits of airbrake companies. There are two companies, Westinghouse Air Brake and New York Air Brake.

The Westinghouse Air Brake Co. is larger than its competitor, and it is the leader in the industry. The present dividend rate is 12½ c. quarterly which at the present price of 2 c. gives an yield of only ½ per cent. ; but there is a good chance of capital appreciation.

The American Steel Foundries is another concern which will benefit from the rail re-equipment. The Company produces cast steel fittings for railway rolling stock ; for which a good demand is anticipated as in many cases existing fittings are obsolete. The last common dividend paid by the Company was a total of $2 in 1931. In all the preceding five years the dividend distribution was $3, and actual earnings varied on either side of this figure by a margin of 50 c. In 1933 and 1934 $2 was paid on the Preference stock, which now stands $10 in arrears. The first nine months of 1934 showed a substantial improvement over the corresponding period of 1933 with earnings 14 c. per common share against a net loss of $1,130,941. The financial position is strong.

The National Biscuit Company's common stock has of late been in demand. The Company's earnings fell down to a quarter during the depression, but the dividend was maintained because it was always below earnings. In the first months of 1934 earnings totalled $1.21 per share against $1.48 in the corresponding period of 1933. The downward trend has continued in 1934 ; and even if the dividend was maintained owing to improved earnings in the last three months, it cannot be justified. At 50 c. quarterly dividend the yield is 6½ per cent., and even if the dividend were lower, it is still attractive. As a slightly speculative holding for yield this stock seems attractive.

In furtherance of my observations regarding Mathieson Alkali last week, readers of *Indian Finance* can confidently look forward to the prospects of the Company during this year. There has been increased activity in the textile industry, particularly in rayon, which should improve the demand for caustic soda, the glass bottle industry which should take larger amounts of soda ash and the price of chlorine for disinfectant was raised by $3 above on January 1. These are bullish points which should work out favourably to holders. It is generally believed that though this Company's earnings will probably work out at around $1.20 per share, against a $1.50 dividend the rate of distribution is unlikely to be changed.

Consequent to the publications of the Federation Aviation Commissioners' report, Aviation shares improved in prices and were the feature of the market on the last day this week. The Aviation Report recommends the appointment of an Air Commerce Commission, a large military air craft building programme, the construction of two large dirigibles and the introduction of an experimental low-rate air mail postage.

The Steel industry has continued its upward trend and steel mill activity for the week was 56 per cent. of capacity compared with 51.6 per cent. last week. A recession in output is not anticipated ; but it is expected that increase will not be by more than another 5 or 10 per cent. Business news from the automobile industry is encouraging.

The Chairman of the United States Steel Corporation in his address to the shareholders stated that the company's operations were considerably below the average for the industry. The reduction in operations began in the third quarter and continued into the fourth quarter reaching the low point of 19.1 per cent. capacity in October. But there was a subsequent increase and the average for the quarter was 23 per cent.

The total output for 1934 amounted to 6,000,700 tons or 31.2 per cent. of capacity compared with 5,536,000 tons (28.7 per cent.) for 1933.

The net working assets for 1934 were well maintained showing an increase of over $11,500,000 over the end of the previous year.

The improvement in this industry has been in favour of the small producers and the results of the

Inland Steel Co. are creditable. The spurt in earnings from 13 c. to $3.10 over share is remarkable.

The Bethlehem Steel Corporation have again decided not to declare a dividend against preferred stock. The net income for 1934 was $551,000 against a deficit in 1933 of $8,736,000. Operations during the last quarter of 1934 averaged 26.2 per cent. of capacity against current operations at 40 per cent.

Business news from the Automobile industry are encouraging and the Federal Court of Chicago has approved the reorganisations of the Studebaker Corporation. The Corporation is granted funds to the extent of $5,500,000 by a group of underwriters headed by the Field Glore Company.

The capitalisation will be in the form of 5,000,000 common shares having a par value of $1. Of this number 2,138,000 will be issued while $7,000,000 of ten-year debentures bearing 6 per cent. will also be offered.

The holders of Notes valued at $14,860,000 and other creditors will be reimbursed, partly by shares in the White Motor Company and partly by the new Studebaker stock. Holders of common stock must, however, subscribe to the new Debentures and the new common stock in order to qualify for any dividends in the new Corporation.

There have been imports of gold in the week ended January 30, the total being $72,464,000 of which $37,507,000 was from England, $12,300,800 from France, $11,351,000 from Holland and the rest from other countries. As a result of these imports the excess reserves have risen sharply to more than $2,200,000,000. This has to be mainly explained by the buying of gold abroad in the expectation that prices would go up. But this buying has ceased owing to the fears that price for the metal might be reduced to a substantial extent in the event of the Supreme Court's decision being adverse to the Government.

Business pointers. There has been more of good business news. Steel mill activity for the week was 56 per cent. of capacity compared with 51.6 per cent. last week.

Freight loadings in the week ended January 19 totalled 563,000 cars. This represents an increase of 9,300 cars compared with the previous week, and an increase of 2,600 cars against the corresponding week of last year.

Motor vehicle production in December totalled 127,940 passengers cars and 55,130 wagons against 45,490 and 32,930 respectively in November.

Figures issued by the Bureau of Labour statistics record a gain in industrial employment for December of 340,000 persons or 1.7 per cent. over the total for November. Pay rolls increased by $10,800,000 or 6.2 per cent. This is the largest December gain since 1919.

Brokers' loans fell $20,000,000 in the week ended January 30 to $614,000,000.

MANAGING AGENCY SYSTEM

VIEWS OF SHAREHOLDERS' ASSOCIATION

The following recommendations are made by the Bombay Shareholders' Association:—

Our first suggestion is that the Managing Agency system in relation to new companies should be prohibited by law and that in relation to the existing companies, the same should be statutorily controlled.

The directions, in which statutory control of the managing agency system should be sought, are as follows:—

1. It should be laid down that Managing Agents should, from time to time, provide adequate finance required for the undertaking on reasonable terms and that, on default, the agency should be liable to termination.

2. The duration of managing agencies should be curtailed. We suggest that the same should not exceed seven years in the first instance. Shareholders should be empowered to renew the agreement and to terminate it in case of misconduct, mismanagement, negligence or incompetence of the managing agent. It should also be provided that it would be competent to shareholders holding one-tenth of the issued capital to remove the managing agents by proving in a competent Court of Law that the managing agents were guilty of any of the acts aforesaid.

3. It should be provided that managing agents should not be at liberty to resign without a just cause except on payment of compensation.

4. At least one member of the managing agents' firm should be a technical expert.

5. When a firm acts as managing agent, particulars of the names and addresses of its partners with changes therein should be recorded in a register to be kept for the purpose. Particulars of names and addresses of all the persons interested in the agency remuneration should also be recorded in this register. If such persons happen to be Directors, particulars of their interest in the managing agency should be stated in the register of directors to be kept pursuant to Sec. 87. The register should be kept open to inspection of shareholders.

6. If a limited company acts as managing agents, its issued capital should bear a reasonable proportion to the capital of the principal company. A copy of its balance sheet should be supplied to, and should be open to inspection of, shareholders of the principal company.

7. Appointment of new managing agents, renewal of managing agency contracts and removal of managing agents should be subject to the approval of the company in general meeting.

8. The managing agency contract should not be varied or modified except by a resolution of the company in general meeting.

9. (*a*) The remuneration of managing agents should be a fixed percentage of net profits which should be defined to mean surplus remaining after deduction of all expenses, interest on loans and debentures, depreciation and the following items:—

1. Premium on the issue of new shares.
2. Profits realised on sale of capital assets.
3. Profits realised on sale of investments.
4. Gain in exchange.
5. Dividends from subsidiary companies.
6. Interest on other investments, loans and advances.
7. Other unusual profits, e.g., bounty, subsidy, etc.

(*b*) A statement certified by the auditors showing how the amount of profit for the purpose of calculating the managing agents' commission has been arrived at should be attached to the balance sheet.

(*c*) All other forms of remuneration, for example, commission on production, commission on sale, commission on purchase, commission based on percentage of bills of labour, office allowance etc., should be prohibited.

10. Clauses in agency agreements empowering managing agents to contract with the company or to do any other work for the company or occupy any other office or place or profit under the company should be declared void.

11. It should be made penal for the managing agent to receive directly or indirectly any profit, commission, allowance, payment, compensation or any other remuneration either through himself or others in respect of any work done, services rendered or contracts entered into in connection with the company except his prescribed agency remuneration and interest on his loans to the company.

12. Loans and advances to managing agents or any partner of their firm or any member of their family

or any director or officer of their company (if the managing agent is a limited company) should be prohibited.

13. Advances or loans to concerns under the same management as well as investments in the shares or debentures of companies under the same management should be prohibited.

14. Managing agents should be debarred from doing the following acts or exercising the following powers:—

a. Assignment of their agreement or office without a special resolution of the company in general meeting.

b. Mortgage or assignment of their interest in the managing agency. Mortgage or assignment of the interest of any member of the managing agency firm should also be prohibited.

c. Receiving compensation on winding up or otherwise.

d. Insisting upon being appointed managing agents of another company to which the business of the company under their agency is sought to be transferred in the interests of shareholders.

15. Directors should have full control in all matters concerning the affairs of the company and managing agents should be bound to carry out their decision. Any provision purporting to confer any power upon managing agents which has the effect of restricting or excluding the directors' powers should be declared void. The law should lay down the powers to be ordinarily exercised by the managing agents and those which should be exercised by the directors alone acting as a Board.

16. Provisions exempting managing agents from liability in respect of negligence should be declared void.

17. Contracts for the appointment of managing agents should be circulated to shareholders within ten days from the date of their execution as also all variations or modifications that may be made in such contracts.

18. The memorandum contemplated by Section 91 (*d*) of the Indian Companies Act should be forthwith initialled by the auditors.

19. Managing agents should not have the right to nominate more than one representative to the Board of Directors and at least three-fourths of the total number of directors should be persons who should be subject to election by shareholders and who should not be directly or indirectly connected with or interested in the managing agency or occupy any office or place of profit under the managing agents.

20. Some machinery should be evolved whereby managing agents could be prevented from inserting unjust and unfair provisions in their favour.

21. Managing agents should be prohibited from engaging in competitive business.

22. The managing agent or any member of his firm or company should be disqualified from acting as liquidator of the company.

23. Managing agents should be restricted under heavy penalty from transferring their shares in favour of any director with a view to enable the latter to acquire qualification.

24. Legal advisors of managing agents should not act as legal advisors of their companies.

25. Auditors of managing agency firms or companies should not be eligible for appointment as auditors of the companies under them.

26. Any arrangement which gives undue or disproportionate voting power to managing agents should be prohibited.

27. Managing agents or their nominees should be prohibited from voting at meetings of companies in regard to matters affecting their appointment or removal.

THE ALEXANDRA JUTE MILLS LTD.

Report for the half-year ended 31st December, 1934.

	Rs.	A.	P.	Rs.	A.	P.
The Revenue Account shows a profit of				81,542	13	2
Deduct—Annuities and Debenture and other interest	25,474	13	6			
Less—Investment interest ...	15,289	0	10			
				10,185	12	8
Net Profit ...				71,357	0	6
Add—Balance brought forward from last Account				25,992	5	11
Leaving an available balance of ...				97,349	6	5
Which it is proposed to distribute as follows:—						
In payment of the Preference Dividend for the half-year ended 31st December, 1934 at the rate of 7 per cent. per annum (free of Income-Tax)	31,500	0	0			
In payment of an Ordinary Dividend for the half-year ended 31st December, 1934, at the rate of 12 per cent. per annum (free of Income-Tax)	36,000	0	0			
				67,500	0	0
Leaving a balance of				29,849	6	5

to be carried forward to next account.

The stock of Jute has been entered at less than cost price and that of Manufactured Goods at contract rates.

Investments.—During the half-year, the Government Securities which the company held, stood at very high premiums in the market, and it was decided to realise these Securities for re-investment in the new 3½ per cent. 1947-50 Loan. There was a profit of Rs. 58,338-10-0 on the sale of the old investments which has been utilised to reduce the purchase price of the present holding in the new Government Loan.

Directors.—Under Clause 84 of the Articles of Association Mr. E. Studd retires from the Board at this time, but being eligible offers himself for re-election.

Auditors.—The retiring Auditors, Messrs. Lovelock & Lewes, Chartered Accountants, offer themselves for re-election as Auditors to the Company for the ensuing year.

Thos. Lamb, E. Studd, J. R. Coulthard, S. S. Hodson—*Directors.* Begg Dunlop & Co., Ltd.—*Managing Agents.*

INDIAN FINANCE YEAR-BOOK, 1934

LONDON PRESS OPINIONS

The Times

Useful Reference Work

Mr. C. S. Rangaswami, Managing Editor of the Calcutta weekly, *Indian Finance* now on a visit to this country, and his colleague, Mr. P. R. Srinivas, are to be congratulated upon the thoroughness of the *Indian Finance Year-Book, 1934*, Calcutta, Rs. 5 (7s. 6d.) It is valuable for the comparative tables given in all the sections, which comprise accounts of the India Government and the Provincial Governments; currency and monetary tables; external and internal trade in the chief commodities, industries, banks, insurance, public utilities, transport, co-operation and population.

Imports of cotton piecegoods of various descriptions from different countries are shown in millions of yards, figures being given of pre-war, war and post-war averages (each covering a five-year period) and of each year from 1929-30. Similarly, there is given the composition of the paper currency reserve under ten headings for the last day of each month since March, 1914. Each main section is preceded by an instructive survey of events and conditions in 1933-34.

A useful feature of the book is the tabular statement showing the working of the Tariff Board since its establishment in 1923, comprising the subject of enquiry, the recommendations of the Board, and the action taken thereon by Government. The industrial section is full and explanatory. The Year-Book will be of value to all who wish to be well informed on Indian economics.

The Financial Times

"Indian Finance Year-Book, 1934."

A Practical Guide to Current Problems.

The Joint authors of *Indian Finance Year-Book, 1934*. were wise not to subordinate the quality of this invaluable compendium to the rigorous requirements of a time table. The result is a notable contribution to Indian economic literature, as well as an indispensable work of reference, for the merchant, student and politician alike.

It would be difficult to imagine a more comprehensive and up-to-date compilation of facts and inferences, which should be in the hands of all who aspire to a proper understanding of the Indian problem. The national finances, including the provincial budgets and railway accounts, banking, currency, monetary and trade—overseas and internal—statistics are all marshalled and presented, with comparative figures in many cases for the preceding ten years, in convenient and attractive form.

Separate sections are devoted to industry, banking, insurance, public utilities, transport and co-operative societies. The history and working of the Indian Tariff Board are reviewed, and a feature of the banking and insurance section is the analyses of the balance sheets of the leading British, Indian and foreign undertakings operating in India. The introductions to each chapter are well written and informative. The correctness of the facts can hardly be disputed. The authors' conclusions, if not always equally indisputable, are set out with obvious sincerity and based upon the knowledge and experience of one of the most successful and well informed Indian financial journalists.

The Policy

Indian Finance Year book, 1934 (Calcutta, Rs. 5)

The issue of this important publication so late in the year is regretted by the joint editors, P. R. Srinivas and C. S. Rangaswami. In the compilation of the book they encountered great difficulties in endeavouring to cover the entire field and were unwilling to subordinate the quality of the work to the requirements of the time table. The Year Book is an excellent survey of the National finance of India in 1933-34. It shows that India, having passed through a period of unprecedented deperession has now emerged into a better era. A brief résumé of the National Finances in 1934, given at the beginning of the book, deals with the finances of each Province separately, giving a survey of the Provincial Budget, and the taxation proposals for 1935.

The Daily Herald

Financial details are regarded by many as being uninteresting. Sometimes they are. But when they are intelligently illustrated they often provide most interesting studies.

An example of the latter kind of financial record is the *Indian Finance Year-Book. 1934*, which is an annual supplement to *Indian Finance*. The editor is P. R. Srinivas, and the Year-Book is published from 20, British Indian Street, Calcutta, at the price of five rupees.

It covers the entire national economic life of India and should prove of particular interest to investors in Indian securities at the present time. It provides a layman's study of the situation, with interesting sidelights on the human side of Indian problems, but a study which should at the same time provide the expert, the banker and merchant with the information he requires.

Discussing the means by which budgetary equilibrium has been established in the various provinces the editor, while congratulating the Governments concerned, does not hesitate to point out that "such improvement as has been effected has been at the cost of high human suffering, and that in the centre the very claim of Government to having balanced the budget is open to doubt and question."

The Financial News

"Indian Finance Year-Book, 1934,"

The Indian Finance Year-Book, 1934. (Indian Finance, Calcutta, Rs. 5) copies, of which have just reached this country, is a notable contribution to Indian economic literature. It is an indispensable work of reference and a most comprehensive compilation of facts and inferences. Statistics on national finances, provincial budgets and railway accounts, banking, currency, and trade, are all presented, with comparative figures in many cases for the preceding ten years, in convenient form. Industry, banking, insurance, public utilities and transport are dealt with in separate sections.

WORLD OF INDIAN FINANCE

Calcutta, February 22.

Money has been extremely and unaccountably tight in Calcutta, and somewhat easier in Bombay. Had there been a squeeze for credits in both centres, it should have been easy enough to understand the money position. But, what is hard to explain and divine the cause of is this phenomenon of dearer funds in Clive Street and cheaper funds in Hornby Road. Usually, it is Calcutta which experiences a shade more comfortable monetary conditions. The reversal of the usual phenomenon may, perhaps, be due to a transfer of a portion of giltedge holdings from operators in the Western capital to those of the Eastern. Business has been done up to 3½ per cent. in call money. Even this high rate fails to coax lenders. In the result, the turnover in the call money market continues negligible. Equally sparse is business in the exchange market. 'Sparse' would, perhaps, be an incorrect description. There has, practically, been no business in this section. Bills are conspicuous by their absence. Bankers find little work at their desks. Brokers find little use and less profit bustling about in their baby cars. The same lifelessness marks every commodity market and every stock exchange. Prices have receded all round. Firm rates are ruling only in the money and exchange markets. It is a Sahara of listlessness and inactivity. Cheap and abundant credits have changed the fact of this Sahara even as the Punjab canals have transformed the Bikaner from an arid desert to a fertile State. The credit irrigation is not only poor; the channels are choked up and dammed.

On the publication of the Imperial Bank Statement on Thursday, an impression grew in financial circles that the Government must have expanded currency. This impression was fostered by the reduction of Ways and Means Advances from Rs. 6 crores in the week ended February 8 to Rs. 1 crore in the week ended February 15. The return of so big an amount as Rs. 5 crores must have been possible, the market argued, only because of an expansion of currency for this sum. We do not think that the conclusion drawn in this regard can be correct. This reduction of Rs. 5 crores in Ways and Means Advances is easily accounted for on a closer scrutiny of the figures in the latest return of the Imperial Bank and by a study of the Treasury Bills communique of last week.

Government securities held by the Bank have increased by Rs. 2½ crores. We should think that a good part of this must be accounted for by the Bank's bigger applications for Treasury Bills. In this week's communique of the controller of the currency, sales of intermediate Treasuries came to Rs. 1.4 crores, a figure so large that it stands out in sharp contrast to the sales at the taprate in the previous week and the end of the following week. We shall not be far wrong if we infer that the Imperial Bank should have, possibly taken Rs. 1 crore of intermediate bills in that week. It is also possible that of Rs. 1½ crores subscribed for by tender on February 12, by far the bigger proportion should have belonged to the Imperial Bank. In other words, we are inclined to surmise that of the Rs. 5 crores, which is the reduction in the Ways and Means Advances, at least Rs. 2 crores represents a mere transfer from one head on the assets side to another. On the liabilities side, Public Deposits are down by Rs. ½ crore. Thus, of the reduction in the Ways and Means Advances, Rs. 2½ crores is explained away by the increase in the Imperial Bank's holdings of Treasury Bills and the decrease in Government's cash balance with the Bank. The remaining Rs. 2½ crores could have been made up by the excess of revenue over expenditure, which, in the middle of February, could certainly yield a handsome surplus like Rs. 2½ crores. It is also significant that, while Ways and Means Advances have been repaid to the extent of Rs. 5 crores, the cash balance of the Imperial Bank has gone up only by Rs. 66 lakhs. There is a sharp increase under loans of Rs. 1½ crores. This means that, owing to continued stringency of money, banks

have had to overdraw their account with the Imperial Bank. In any case, we shall not have to wait long to know whether this impression of expansion of currency is really correct. The next communique dealing with the account of the Paper Currency Reserve should make the position quite clear.

Meantime, we are glad that the plea for the utilisation of surplus sterling assets for the creation of additional currency has received further support in a speech which Mr. B. T. Thakur made before the Rotarians in Karachi. He suggests that, if the Government are unwilling to expand currency against sterling assets, they might, following the practice started in 1932, borrow Government securities from the Imperial Bank and create currency thereagainst. Such loans of securities will continue so long as the pressure for money persists in the markets. The advantage of this proposal is, in Mr. Thakur's view, that the Government will not be committed to a permanent expansion of currency, and that, as soon as the demand abates, the additional currency might be withdrawn. For our part, the issue involved is not one of mere expansion or reflation. It touches the very functioning of the sterling exchange standard. We maintain that, whatever the standard, there should be a limit to interference or manipulation. The course now pursued by the Government is manipulation run riot. Looking at this matter in terms of the fundamentals of the working of a currency standard, we would like to see the principle established that sterling purchase over Government's requirements are pure and simple currency transactions ; and that, on no account, should they be treated as Treasury transactions.

We have received considerable enquiry as to the future outlook of the several markets. Our confidence in the intrinsic vitality of giltedge and of selected shares and of selected commodities remains unabated. But we feel hesitant about taking any view of the future, so long as the currency policy of the Government is so violently opposed to scientific canons or to commonsense standards of understanding. The biggest bearish factor in the situation is the currency policy of the Government. The next biggest bearish feature is the uncertain outlook in London. The debacle in the commodity markets a fortnight ago has had serious repercussions. Dr. Paul Einzig and Mr. Francis Williams have dealt with the significance of the pepper trouble. It looks as though persons of high position are involved. Confidence has been shaken in some degree. The public have some manner of vague apprehensions. In the meanwhile, everyone is apathetic and prices are giving way through sheer lack of support. In the light of these two factors, it is a great thing that the Indian markets have stood up to the extent that they have. It is true that prices have given way ; but at each reaction, buyers have appeared and recovery has always been noticeable. At the close, however, a pessimism more serious than that of the earlier days appeared to prevail. We for our part, can furnish no antidote for this pessimism. The Finance Member can. Perhaps he will. It were best to wait till the budget. On the whole, the budget should prove an important bullish influence in more ways than one.

Looking slightly further ahead, the taking over of the Currency Department by the Reserve Bank of India will become effective as from the new financial year. Whether the Finance Member expands currency or not in the remaining five weeks of the year, it may be taken as certain that the policy in this regard will be considerably changed, once the currency management gets into the hands of a Bank, whose Governor is Sir Osborne Smith and whose Board consists of men like Sir Purshottamdas Thakurdas. We believe that expansion of currency may be predicted as certain sometime before the middle of April.

The Railway Budget, which was presented to the Central Legislature this week, has hardly any exciting interest. So far as these columns are concerned, its chief significance is that, in spite of the railways working at a loss and in spite of their inability to make specific contributions to General Revenue, the working of the railways has not, in any way, embarassed the Ways and Means machinery of the Central Government. So far as the current year is concerned, the appropriation to the Depreciation Fund was Rs. 13.73 crores ; and withdrawals from this Fund to meet cost of renewals and replacement were Rs. 8.00 crores. The net accretion to the Fund during the year was thus Rs. 5.73 crores. As the deficit anticipated on the working of the year is Rs. 4.24 crores, and as this is to be met by a temporary loan from the Depreciation Fund, the net result is that the actual accretion to the Depreciation Fund is about Rs. 1½ crores. The capital programme of the Railways for the year amounts to only a small addition to the capital charges. Thus the Central Government were not called upon to find any part of the capital needs of the railways. Turning to 1935-36 the position is that the appropriation to the fund is Rs. 13.28 crores ; the withdrawals for replacement and renewals are Rs. 9.56 crores ; the net accretion to the fund is Rs. 3.78 crores ; the loan against the deficit is Rs. 1.90 crores ; the actual accretion being just short of Rs. 2 crores. According to the Works programme proposed for 1935-36, the total of Rs. 15 crores is to be met by Rs. 9½ crores from the Depreciation Fund and Rs. 5½ crores by way of additional capital. The new money that the Railways would require for their capital works is, therefore, Rs. 5½ crores, of which Rs. 2 crores is available in the Depreciation Fund.

So far as the Ways and Means of the Central Government is concerned, all that the Finance Member will have to find is Rs. 3½ crores for the railway

Thursday evening.

International financial circles will heave a sigh of relief that at long last the cloud, that was hanging over them has lifted. For the Supreme Court has delivered its verdict on the gold clause cases. And the verdict is such that in effect the *status quo* has been preserved intact. The details regarding the Court's decision cannot be ascertained or appraised till the full text of the judgment is available. At the moment one has nothing more than the reports of the news agencies, which cannot, in the nature of things, be expected to explain how the Court arrived at its conclusions. It is significant to explain how the Court arrived at its conclusions. It is significant that a unanimous decision has been found impossible. There is even a sharp cleavage of opinion among the judges, the final verdict having only a majority of one, five judges being for and four against. On the basis of the reports to hand, it would appear that the view of the dissenting judges is more plausible. The position of the majority is that the gold clause does not apply in the case of private bonds. The Chief Justice., Mr. Hughes, is said to have announced that private gold clause obligations need not be paid off in gold or in the equivalent amount of devalued currency. The Government gold clause bonds, the judges declare, are on a different footing ; and they have decided that these must be paid off in gold or in equivalent amount of devalued currency.

But, strangely enough, the Supreme Court has denied the right to sue for redress in Court to holders of gold certificates. The minority naturally point out the incongruity of deciding that the gold clause is valid in cases of Federal bonds and denying at the same time the individual holders thereof the right to obtain a payment of 1$. 69c. for each dollar payable under the bond. Mr. Reynolds criticised the majority of the judges for saying in one breath that Congress had no power to repudiate their gold bond obligations and at the same time reaching the concludion that because a Government bondholder cannot accept gold, he must accept 60 per cent. in the legal tender dollar for each gold dollar which the Government had promised to pay. Mr. Reynolds added that according to the majority Congress was without the power to repudiate its gold obligations in its own bonds, but cannot be compelled to pay in the devalued dollars the value of the gold clause.

It is regrettable that, while the report explains the language of the dissenting judge this obvious incongruity in the decision of the majority, it does little to explain the position of the majority. It can, however, be gathered from the report that the Supreme Court has denied the private holder of Federal bonds the right to obtain 1$. 69c. on the ground that the individual has sustained no damage and he is not, therefore, entitled to any damages. The report points out that the Court rule that the action of the Government in devaluing the dollar was unconstitutional, but also declare that certificate and bondholders had sustained no damage and, therefore, no money was to be paid as premium resulting from the Court's decision. It is difficult to see how it can be contended that the devaluation of the dollar has caused no damage to the holders of bonds carrying the gold clause, unless it is supposed that the present legal tender currency has the same value as the gold one, a palpably untenable contention. One has to suspend judgment on this question till fuller reports are available through the air mail papers.

While the reasoning of the Supreme Court is a matter of somewhat academic importance, the practical import of the decision is that there is no change on the conditions which prevailed at the time the gold clause case came up before the Court. The Administration have naturally decided that no new legislation is necessary. The exciting speculation as to what President Roosevelt might do to circumvent an adverse decision of the Supreme Court has thus been rendered unnecessary. The market have responded to the removal of this uncertainty. The process of liquidating the bull position in the dollar, which had been built up in anticipation of the decision of the Court adverse to the Administration, has already begun. While the commodity markets have experienced only a sentimental effect, the exchanges have to respond in a more precise manner. In the language of a report appearing in the dailies, that is a complete *volte face* in the international exchanges. While formerly the dollar was very strong and the franc neared the gold export point, the position has now been reversed more or less ; and it is the dollar that has weakened in relation to the European currencies. The Continent is no longer a seller of franc and a buyer of dollars. Those, who have bought dollars in anticipation of a rise in its value to the former level, are now rushing to cover. The franc improved in terms of the dollar ; and sterling has followed in the wake of the latter. It is believed that this tendency will continue for some time. Obviously, the speculation, that had taken place as a result of the uncertainties regarding the gold clause cases, will have to be looked into. And once such a liquidation has taken place, the markets will revert to their normally abnormal position.

The settlement of the gold clause issue takes international finance back to the position that prevailed in the middle of January. In every speculation about the prospects of stabilisation, it was mentioned that the gold clause cases, at any rate, would be an effective obstacle to the clarification of the monetary and exchange policy of Mr. Roosevelt. Now that the gold clause is finally out of the way, it is to be wondered whether any progress will be made in the coming months in America's approach to a stabilisation agreement. This is extremely dubious. But it is noteworthy that even if there were to be progress from the side of the United States, there has been a setback, so far as Britain is concerned. We pointed out sometime back that what was then called the *ballon d'Essai* was effective in showing up the reactions of Great Britain to apparently serious proposals for stabilisation. Since we wrote on this subject, it is learnt that the British Treasury ascertained the opinion of the Chairmen of the Big Five in England on this question before engaging in any talks with the French Premier, and that they juncture.

RAILWAY BUDGET

"Though our progress has been slow, it has been steady, and the setbacks, though not entirely absent, have been on the whole few and of no serious magnitude"—this observation of Sir Joseph Bhore in the course of his speech in introducing the Railway Budget for 1935-36 sums up the present position of the Indian Railway. In presenting the budget for 1934-35, the Railway Member expressed the hope that, at last, the railways were fairly on the road to recovery; but he was careful to add that it would be rash to anticipate any rapid progress for some time along that road. The course of events in the succeeding twelve months has fortunately proved that the hope was justified and that the qualifying terms in which he expressed his optimism erred on the side of undue caution. Sir Joseph, on the present occasion, is satisfied that there are now additional grounds for a more optimistic forecast. Sir Guthrie Russell, who presented the Railway Budget in the Council of State, is not quite so guarded in giving expression to his confidence about future prospects; for, he is, evidently, not unduly worried of being charged with an improper measure of optimism. Sir Guthrie claims that the figures given in the current budget show that this optimism has been justified and that the railways of India are now well on the road to a period of prosperity. We may have our differences in this particular or that with those to whom is committed the destiny of the railways; but we can appreciate the relief which the Railway Member and the Chief Commissioner of Railways should have felt in being able to recite a happier story to their hearers. We must also acknowledge that, during a difficult period, both Sir Joseph and Sir Guthrie, ably aided and supported by Mr. P. R. Rau, the Financial Commissioner for Railways, have shown patience and endurance, enterprise and resoluteness in tackling problems of exceptional severity and complication. Sir Joseph himself pays a tribute to the Chief Commissioner and the Financial Commissioner for their unfailing courage under the most depressing circumstances, their sound judgment and their extraordinary capacity for work. The administration of the railways in the last three years has proved that this period of trial has been valuable and that under the inspiring lead of Sir Joseph, Sir Guthrie and Mr. Rau, everyone at the head of the respective railway systems has come to realise, vividly, the need for the pursuit of economy translated into terms of greater efficiency. As this is the last budget of Sir Joseph Bhore, he is entitled to a special meed of congratulation on the satisfaction that he leaves a pleasanter task to his successor, and of thanks on the ready ear which he gave to those who belonged to the opposite side and on the wide outlook which he brought to bear in the execution of his task. We believe that, in his twin aspect, Sir Joseph has proved a better Railway Member than a Commerce Member. Can we pay a higher tribute?

* * *

A year ago, the Railway Member anticipated that the revised figures for 1933-34 would show a loss of Rs. 7.78 crores. The actual loss was Rs. 7.96 crores. The difference was, it is pointed out, due entirely to the interest charges being Rs. 18 lakhs higher than anticipated. It is also pointed out that the holidays in the last week of March were responsible for throwing forward Rs. ½ crore of railway earnings into the next financial year. The budget estimate for 1934-35 provided for a deficit of Rs. 5¼ crores. The revised estimate places the deficit at Rs. 4¼ crores. For 1935-36, the budget estimate anticipates a deficit of Rs. 1.90 crores. This loss is to be really attributable to the strategic lines. On commercial lines, the result is expected to be a small surplus of Rs. 7 lakhs. It will thus be seen that the deficit in the next financial year will be less than half of that in the current year, less than a fourth of the deficit in 1933-34 and less than a fifth of that in 1932-33. In this connection, it is useful to study the figures of this budget in relation to those of twelve years. Taking a twelve-year period, it is to be remarked that the first six years after the separation of railway finance from general finance were surplus years and they are more or less counter-balanced by six deficit years. The following analysis on the results of these twelve years is furnished in the Explanatory Memorandum:

> "So far as we can judge at present, the era of deficits ushered in by 1930-31 will continue during the current year and the next, and the first six surplus years after separation will probably be counter-balanced by six deficit years.
>
> If our expectations for 1934-35 and 1935-36 prove reasonably correct, the net result of working of Indian State Railways (commercial and strategic) in twelve years of mixed fortunes will be, on the whole, a small surplus of Rs. 14 crores and an accumulated balance in the Depreciation Fund of, nominally, Rs. 41½ crores or Rs. 55½ crores in all. As, however, during the first seven years of the period, railways paid Rs. 42 crores as a contribution to general revenues, this large credit balance will have dwindled to Rs. 13½ crores, of which half a crore is invested on behalf of the Railway Reserve Fund, and Rs. 13 crores will be the actual balance of the Depreciation Reserve.
>
> At the end of 1935-36, the total contributions to general revenues remaining unpaid during the 5 years beginning with 1931-32 will amount to about Rs. 26 crores. Under existing arrangements, Railways are liable to pay these arrears when they begin earning surpluses, after the loans amounting to about Rs. 28½ crores from the depreciation fund have been repaid, and before they can again begin to accumulate reserves."

In simple terms, the railways in these twelve years have earned enough to pay all the expenses inclusive of interest charges and actual sums spent towards depreciation; to contribute Rs. 42 crores to General Revenues; to accumulate Rs. 13 crores in the Railway Depreciation Reserve Fund, and Rs. ½ crore in the Railway Reserve Fund. The surplus over actual expense is thus Rs. 55 crores or Rs. 4½ crores per year. Considering that the economic depression from which the country has been suffering has been of an exceptionally severe nature, and considering that most railway systems of the world are still working at a considerable loss, it is a creditable achievement that Indian railways have not only paid their way but earned a surplus of Rs. 4½ crores per year in the twelve-year period.

* * *

To make this admission must not be understood as approval of the restoration of the cut in salaries. We are firmly convinced that the scale of salaries for the higher appointments in all public services in India is so extravagant that it has no parallel in any other country. For a poor country like India,

the continuance of these top-heavy scales of salaries is an onerous burden. We stand not only for Indianisation of services but also for the scaling-down of the emoluments of the higher officials. Such scaling-down is necessary not only as a measure of economy in times of unbalanced budgets, but as a permanent financial reform that ought to be effected in consonance with the poorer economic stamina of the nation. It is surely a poignant anomaly that the poorest country has the fattest-paid officials. What is required is a pulling up of the salaries of the lower ranks and a considerable pulling down of the salaries of the higher ranks. We know that we are powerless to effect reforms of this nature under existing circumstances. Nor are we hopeful that such wholesome changes are possible in the kind of constitution devised by the White Paper. Every measure has been taken to ensure that top-heavy salaries will remain a permanent feature of the Indian administrative system. Our impotence in this regard must not, however, prevent our pressing, again and again, for this reform.

* * *

The taxation system of the country favours the rich and burdens the poor. The administrative system pampers the officials and penalises the clerks and labourers. Railway amenities are available in an extravagant measure for the upper class passengers; the third class passenger, who really contributes to the earnings of the railways, is denied comforts, treated harshly, and hardly counts as a human being for all the consideration he deserves We require a complete rectification of this wrong emphasis. We cannot look forward to such rectification till the capitalistic and Imperialistic bias of those in power is replaced by a fervent understanding of socialism. Meantime, our legislators must insist, on every occasion, for a more sympathetic understanding of the needs and comforts of the poorer class of the travelling public. From this point of view, neither the speech of Sir Guthrie nor that of Sir Joseph has vouchsafed any message of sympathy or understanding for the plight of those who really form the backbone of the railways.

* * *

The capital programme for 1934-35 was estimated, at this time last year, to cost Rs. 14 crores. Of this sum, Rs. 70 lakhs is to be found from stores. The cash expenditure was, therefore, to be Rs. 13 1/3 crores; of which Rs. 4 2/3 crores was to be an addition to capital and the balance was to be met from the Depreciation Fund. The actual reduction in stores balances is now expected to be Rs. 1 crore. The total net expenditure in cash is, in the revised estimates, Rs. 9½ crores. Rs. 8 crores will be debited to the Depreciation Fund. The Works programme for 1935-36 is thus explained in the Explanatory Memorandum :

> "For 1935-36, our programme provides for a total expenditure of Rs. 15¾ crores, against Rs. 10¾ crores in the current year. Allowing for a further reduction of Rs. ¾ crore in stores balances which, if this estimate proves correct, will be reduced to Rs. 8½ crores at the end of the year, the actual cash outlay will be Rs. 15 crores. Of this amount, Rs. 9½ crores will be found from the Depreciation Fund ; and the balance of Rs. 5½ crores will be an addition to capital."

New construction will require Rs. 26 lakhs; new projects Rs. 18 lakhs; and purchase of the Amritsar-Patti-Kasur Railway Rs. 44 lakhs. The main expenditure is on the open lines, for which the budget provision is Rs. 15 crores. Rs. 75 lakhs will be found from stores. The major expenses are restoration of damages caused by the 1934 earthquake, the protective works for the Hardinge Bridge, track renewals (Rs. 5 crores), bridge work (Rs. 1 crore), and other structural works (Rs. 3¾ crores). Rolling stock programme will cost Rs. 4½ crores. Locomotives and boilers will cost about Rs. 1 crore; carriages Rs. 1¼ crores; and wagons Rs. 2¼ crores. The total number of wagons ordered amounts to slightly over 5,000. The Railway Member also announced that he was providing for a special expenditure of Rs. 10 lakhs to re-condition some of the wagons which, though still nowhere near the end of the normal life, have proved very uneconomical to maintain and run. The intention is to reopen the Jamshedpur factory and have this re-conditioning done there. Considering that the railway budget for 1935-36 provides for larger capital expenditure, there might be an impression that this will give a fillip to the Indian industries which have passed through a long period of depression and are looking forward for more and more orders from railways. This impression will not be correct. In the matter of wagon building, it is wellknown that the capacity of the Indian industry is equal to the maximum requirements of the railways. Yet, in spite of the promise made to the industry from time to time, the reopening of the workshops at Tatanagar for the manufacture of under-frames deprives the specialised industry of its fair share of the work. Mr. George Morgan did well to draw pointed attention to this matter in the Assembly. It would have been more to the point if attention had also been drawn to the distinct departure which the Railway Board have made this year in their policy of calling for tenders for wagons. Over the past few years, tenders were called for only in India and the Indian industry had all the work given to it. This year, we understand, tenders have been called for both in India and abroad for a third part of the total requirements. We cannot understand the motive behind this move. But the point to be stressed is that while the Indian wagon industry is capable of meeting the full requirements of the Railway Board and are clamouring for all the work that is available,

in order that they may keep their plant working, it would be a scandal if any part of the wagon orders is placed abroad. This is a serious matter and we hope that the Assembly Members would elicit full information on this point from the Railway Member.

THE WINDFALL.

For once the Finance Member of the Government of Bengal has been able to present a budget with the yawning gulf between revenue and expenditure narrowed to tolerable limits. While in former years a deficit of about Rs. 2 crores might be regarded as a foregone conclusion, the budget estimates for 1935-36 show an excess of expenditure over revenue of only Rs. 69 lakhs. And the Finance Member added that, if the province had not been infested with the terrorist blight, the deficit would be only Rs. 6¾ lakhs. A similar improvement is also seen in the earlier years. The actuals for 1933-34 have proved to be better than the revised estimates in that the deficit was less by Rs. 14 lakhs. For the current year, it is even more marked, as according to the Revised Estimates there would be a deficit of only Rs. 46 laks against the deficit of Rs. 1,94 lakhs originally anticipated. It would be well to afford a synopsis of the financial position in the shape of the figures usually furnished in the Finance Member's statement on the Budget.

* * *

The year 1933-34 opened with a balance of Rs. 13¼ lakhs, and in the Revised Estimates the total receipts on Revenue and Capital account, inclusive of the opening balance but not of the advance to be taken to cover the deficit, were estimated at Rs. 975 laks. The actual receipts of Rs. 972 lakhs were less than anticipated by only Rs. 3 lakhs, the decrease being largely due to a fall of Rs. 2 lakhs in the actual recoveries of loans and advances made by the Government of Bengal. On the expenditure side, the total account was less by Rs. 18 lakhs than the Revised Estimate of Rs. 11,32½ lakhs. The net result was that, after providing for the Famine Relief Fund, the deficit in the year stood at Rs. 156 lakhs an improvement of Rs. 14 lakhs over the figure anticipated in the Revised Estimates.

* * *

In the Budget Estimates the receipts on Revenue account were placed an Rs. 9, 19½ laks. According to the Revised Estimates the figure is Rs. 10, 51½ lakhs. Out of the increase of Rs. 1, 32 lakhs. Rs. 1, 11½ lakhs is accounted for by the grant of half the jute duty, calculated on an 8 months' basis which the Government of India, and the balance of Rs. 20½ lakhs represents a small improvement in the receipts under the provincial heads of revenue. Land Revenue is expected to be better by Rs. 17 lakhs, Forests by Rs. 2¼ lakhs and Registration by Rs. 5 lakhs. But as against these improvements has to be set off an anticipated decrease under Excise of Rs. 5 lakhs.

* * *

On Capital account the Revised Estimates show an increase of Rs. 4 lakhs due to the decision to take an advance from the Government of India in order to grant a loan to the Maharaja of Susang. Taking both Revenue and Capital receipts together, the Revised Estimates provide for a total revenue, exclusive of the advance to cover the deficit, of Rs. 11 crores 12¼ lakhs.

* * *

On the expenditure side, the Finance Member anticipates the total expenditure on Revenue and Capital account of Rs. 11, 59½ lakhs, which is Rs. 19¾ lakhs less than the budget figure inclusive of the supplementary grants. The net result would be that the present year is expected to close with a deficit of Rs. 46 lakhs instead of Rs. 1, 94 lakhs as originally estimated.

* * *

As for the coming year, apart from an increase of Rs. 46¾ lakhs in Bengal's share of the jute export

duty, the budget figures for receipts on Revenue account follow closely the revised figures for the current year.

* * *

On Capital account also, exclusive of the advance to be taken to cover the anticipated deficit, the estimate of the total receipts on Revenue and Capital accounts stands at Rs. 11, 60 lakhs as against Rs. 11, 12¼ lakhs during the present year.

As regards expenditure, the Estimates provide for an expenditure on Revenue account of Rs. 11, 71½ lakhs. The increase of Rs. 54 lakhs over the Revised Estimate of the present year is explained in large part by the restoration of the 5 per cent. cut in pay, the restoration of the provision for the reduction of debt, the cost of preparing electoral rolls, the increase in the additional expenditure thrown on the province by the terrorist movement, the increase in interest and pensionary charges and additional expenditure on roads from the Central Road Development Fund and from the proceeds of the taxes on motor vehicles account for Rs. 50½ lakhs out of the total increase of 54 lakhs.

* * *

The balance is spread over a large number of budget heads. A sum of 60,000 has been proved as an addition to the normal quinine grant of Rs. 1,20,000, Rs. 12,500 for a grant to the Tuberculosis Hospital at Jadavpur, Rs. 19,000 for the establishment of a power loom weaving section at the Government Weaving Institute at Serampore, Rs. 10,000 for the purchase of new silk-cleaning and twisting machinery for the Silk Weaving and Dyeing Institute at Berhampore, Rs. 44,000 for the provincialisation of the Sakhawat Memorial High School for Moslem girls, and Rs. 14,000 for the erection of a Moslem Hostel at the Krishnagar College.

* * *

Observed at the outset, the expenditure for 1933-36 shows an excess over revenue of Rs. 69 lakhs. This compares so favourably with the usual amount of Rs. 2 crores that one might wonder whether the Government of Bengal had acquired a sudden fit of financial prudence. With becoming modesty, the Finance Member has disclaimed all credit. The change in the complexion of Bengal's finances is to be attributed to the decision of the Central Government to make a grant equal to half the yield of the jute export duty. It is not a little interesting that success in this regard has emboldened the Bengal Government to lay claim not only to the whole of the jute export duty but also share of the income tax raised in Bengal. This raises the larger problems of federal finance which can hardly be entered into here. Suffice it here that what some years ago we stigmatised as the attitude of waiting for a windfall has at last justified itself and the Bengal Government has been enabled to claim that but for the misfortune of terrorism they would have very nearly balanced the budget.

B & O BUDGET

The budget statement of the Finance Member of Bihar and Orissa has an interest far transcending the provincial borders. For the whole of India is naturally interested to know how Bihar stood the shock of the earthquake and to what extent the reconstruction of the Province has progressed and how far the Government have succeeded in preserving its financial integrity from the effects of the terrible misshap. The Hon'ble Mr. Nirsu Narayan Sinha has happily divided his budget statement into two parts, one dealing with the measures that have been taken for the reconstruction of the damage inflicted by the earthquake with its financial aspects and the other, the regular finances of the Province. It is encouraging that as little of the financial burdens of the earthquake as possible has been left to devolve upon the Province which certainly does not rank among the the richer provinces of India and that the Government of India have rendered financial assistance. We learn

through the Finance Member of the Bihar and Orissa Government that the Government of India have met in 1933-34 expenditure amounting to Rs. 9¾ lakhs. It is also estimated that they would be required to meet in 1934-35 Rs. 66 lakhs and in subsequent years expenditure amounting to Rs. 101½ lakhs. So far as the Provincial Government are concerned, they have met in 1933-34 expenditure amounting to Rs. 3 lakhs, and it is expected they will have incurred an additional expenditure of Rs. 66 lakhs. It is necessary to add that as a result of the earthquake, the Government have also suffered a loss of revenue of Rs. 6 lakhs. The policy of the Government of India, so far as reconstruction is concerned, is that they will help to bring about the conditions which existed before the earthquake and that any additional expenditure would be borne by the Provincial Government. Even in regard to the survey of the work necessary, the requisite administrative expenditure is found by the Government of India. It will be seen that the policy is on the whole on the same lines as were outlined by Sir George Schuster in his budget statement to the Legislative Assembly last year. There can be no doubt that the whole of India will feel genuinely glad that the Central Government have not gurdged their share of the expenditure caused by the earthquake.

* * *

Turning now to the budget estimates, it is found that the opening balance for 1934-35, which was put at Rs. 8 lakhs in the revised estimates of last year, was actually ¾ lakh less. This deficiency was due to the earthquake. In the last 2½ months of 1933-34 receipts from stamps dropped by not less than Rs. 3 lakhs. Land revenue and irrigation yielded Rs. 2 lakhs less than in the previous year. At the same time expenditure was increased by Rs. 1,77,000 on account or reconstruction of Government buildings and Rs. 1,27,000 on account of increased charges of administration resulting from the earthquake. The earthquake, therefore, worsened the financial position for 1933-34 by about Rs. 8 lakhs; but as mentioned already, the actual opening balance suffered a decline from the revised estimate of only Rs. ¾ lakhs, as the receipts from Excise was Rs. 1¾ laks more and ordinary expenditure in the Police, Public Works and Irrigation Departments was less by Rs. 5¾ lakhs.

* * *

As for the current year, the Finance Member budgeted for a deficit of Rs. 4½ lakhs and a closing balance of Rs. 8,76,000. The revised estimates point to a closing balance which is about Rs. 13 lakhs in excess of the budget figure. In fact, the closing balance for the current year would show an increase of a lakh over the opening balance, though, of course, there would be a reduction in the Famine Relief Fund.

* * *

The outlook for 1935-36, it must be confessed, is not half so rosy. Revenue is put at Rs. 5,31,00,000 as compared with Rs. 5,10,00,000 of budget expenditure for the year and the revised estimate of Rs. 5,33,00,000. Expenditure charged to revenue is estimated at Rs. 5,45,00,000 as compared with the revised estimate of Rs. 5,30,00,000 for 1934-35; and it must be added that provision is also made for a reserve of Rs. 2½ lakhs which is necessary to enable Government to have some money available for meeting supplementary demands, the necessity for which in the conditions of the Province can hardly be overlooked. Few would insist that because the financial position of the Province is not strong, people should be denied the benefits of an increased outlay on education. For our part, we would congratulate the Finance Member on the wisdom of restoring the cut in education expenditure which he had made last year. The restoration of Rs. 3,40,000 to the normal Government grant to local bodies for primary education is thus one of the main items of the increase in expenditure. There are also other items such as Rs. 5 lakhs for reduction and avoidance of debt, an increase of Rs. 3 lakhs on account of interests, Rs. 2 lakhs being on

account of pensions and Rs. 5 lakhs under ordinary items of expenditure. The net effect is that expenditure charged to revenue exceeds revenue by Rs. 14 lakhs. If the amount of Rs. 5 lakhs provided for reduction or avoidance of debt is deducted from this figure, it will be seen that the increase in administrative expenditure is only Rs. 9,40,000. By utilising the opening balance of the year, the Finance Member is able to avoid an actual deficit for 1935-36. One may say, therefore, that there is hardly any satisfaction to be derived from the Bihar and Orissa budget, except that the reconstruction after the earthquake has been essayed in an honest spirit. Considering that Bihar is only one of the Provinces that are faced with a deficit, it looks as though the Provinces will all have to make common cause one day against the imposition of expenditure by the Central Government as in the case of the restoration of salary cuts.

CORPORATION FINANCES

Thanks to the decision of the Government of Bengal to inaugurate the Garden Reach Municipality as from April 1 next, the budget estimates of the Calcutta Corporation for the year 1935-36 are shorn of last year's complexity. The presence of this uncertainty last year necessitated the framing of the estimates on two bases, one inclusive and the other exclusive of Garden Reach. This tended to complicate the presentation of the Corporation's finances; and this year both the Chief Officer and the Councillors must have heaved a sigh of relief. But they must feel embarassed in another respect; for as a result of the establishment of the new Municipality, the Calcutta Corporation would lose a revenue of Rs. 2 lakhs under the consolidated rate for this area and will also have to pay an annual contribution of Rs. 2½ lakhs with retrospective effect as from April 1, 1932. In addition to the contribution to the Garden Reach Municipality, the Calcutta Corporation has also to make virtual subventions to the Cossipore and Manicktolla areas. The estimates of the Chief Executive Officer are that in Cossipore the Corporation will derive a revenue of Rs. 7,90,000 against an expenditure of Rs. 10,65,000, and the corresponding figures in the case of Manicktolla are Rs. 4,80,000 and Rs. 11,52,000 respectively. It will be seen, therefore, that in the case of these two areas, the Corporation has to incur a deficit of Rs. 3 lakhs and Rs. 7 lakhs, respectively without debitting any part of the loan charges of Moore's scheme to these areas. With proper debits on this account the deficits would be Rs. 4 lakhs and Rs. 8½ lakhs for Cossipore and Manicktolla. There is thus a concentration of adverse factors during the year 1935-36 and it should, therefore, be no matter for surprise that as compared with the previous years there should be a financial retrogression during the coming year.

The Budget Estimates for 1935-36 are :—

Opening Balance	...	Rs.	65,16,000
Receipts	...	,,	2,52,90,000
Total	...	,,	3,18,06,000
Expenditure	...	,,	2,79,88,000
Closing Balance	...	,,	38,18,000

The Original and Revised estimates for 1934-35. are—

Original			
Opening Balance	...	Rs.	60,20,000
Receipts	...	,,	2,54,52,000
Expenditure	...	,,	2,69,71,000
Closing Balance	...	,,	45,01,000
Revised			
Opening Balance	...	Rs.	61,51,000
Receipts	...	,,	2,43,61,000
Expenditure	...	,,	2,39,96,000
Closing Balance	...	,,	65,16,000

It will be seen from the above that the revised figure of the closing balance for the current year shows an improvement of over Rs. 20 lakhs on the corresponding budget figures last year. But it is discouraging that the revised estimates of receipts at Rs. 244 lakhs should show a falling off of over Rs. 10½ lakhs from the original budget estimate. The effect of this, however, has been escaped by a reduction in the expenditure from the level of Rs. 270 lakhs as estimated last year to Rs. 240 lakhs, which is the figure in the revised estimates. But it must be borne in mind that to the revised expenditure (Rs. 2,39,96,000) are to be added 7½ lakhs, being three year's contribution to the new Garden Reach Municipality; approximately Rs. 8 lakhs for New Works; one lakh for new motor vehicles and another lakh for unpaid liabilities for Garden Reach,

making a total of Rs. 2,57,46,000 against revenue totalling Rs. 2,43,61,000—a debit of Rs. 13,85,000. The opening balance for 1935-36 is put at Rs. 65,16,000 and the closing balance at Rs. 38,18,000. These estimates do not cover the Garden Reach area which is to be constituted into a separate Municipality from April next.

The reduction of the opening balance for 1935-36 from Rs. 65.16 lakhs to Rs. 38.16 lakhs at the end of the year obviously shows a very unsatisfactory position. And there will be general public support for the opinion expressed by the Chief Executive Office that "there is the necessity of constant vigilance and the need for caution in adjusting our expenditure to revenue from year's end to year's end." It would, indeed, be very difficult to contend that such caution has been exercised in the past in regard to the expenditure of the Corporation. And lately the City Fathers have evinced an enthusiasm for the ideal of Harijan uplift, which has manifested itself in the provision for a current expenditure of Rs. 20,000 and a capital expenditure of Rs. 5 lakhs for the housing of *Harijans* in municipal employment. We do not count ourselves among those who would decry either the altruism of these measures or would insist on the preservation of Puritanic standards of financial policy. But considering that we are still in difficult times in which the behaviour of sources of revenue is strangely indeterminate, it is well that the Councillors show more nervousness at revenue deficits than the present estimates seem to indicate. There is also another consideration why the Councillors should insist on not only a balance budget but also a fair amount of revenue surplus. Even in days of revenue surplus, the Corporation had experienced considerable difficulties in putting through its loan programmes and the effect of unbalanced expenditure on the mind of the investor can easily be imagined. If the difficulties of raising new loans should be increased, the progress of the City might suffer a serious setback. We trust that before the estimates are finally passed, some changes will be effected which will bring the expenditure nearer to revenue than it is.

MALABAR STEAMSHIP COMPANY

The Malabar Steamship Company, hitherto run as a private business, has now been made a joint stock company. The services of the Company now extends to the following seaports: Karachi, Bombay, Mangalore, Cannanore, Tellicherry, Badagara, Calicut, Ponnani, Cochin, Alleppey, Tuticorin and Colombo. The Company has now a definite and recognised status amongst the coastal steamships lines ; and with the growth of business, additional Capital has obviously become necessary. The vendors are transferring their assets valued at Rs. 3.85 lakhs (and, from enquiries in shipping circles, we understand that the price to be paid for the steamers is quite reasonable) and in consideration, receive Rs. 2 lakhs in cash and Rs. 1.85 lakhs in spares. Their taking up the spares for nearly half of the sale-price is the best token of the *bonafides* of the transaction and of the faith of the promoters in the future of the Company. Detailed estimates of revenue and expenditure are furnished in the prospectus ; and the Directors hope to realise a profit of Rs. 1.33 lakhs on a capital of Rs. 7 lakhs. Now, that the shipping conference which met at the instance of Sir Joseph Bhore has placed the varied problems of coastal Shipping on a more or less definite business, fears of rate war or cut-throat competition are greatly reduced. There is, therefore, a reasonable assurance that revenue anticipations, modest as they are, are likely to materialise. The Company is assured of management by men who know the business and who have acquired valuable experience ; and the presence of Sir M. Krishnan Nair on its Board and the influential list of first subscribers to the share issue are guarantee that the Company must appeal to the investing public. We wish it all success.

(*Continued from Page 582*)

capital programme. This means that the one department, in whose behalf, in earlier years, the Central Government had to find substantial sums by the issue of new loans, will need no more than Rs. 3½ crores. The other departments like irrigation, or provincial governments would not require more than Rs. 5 crores to Rs. 10 crores for their capital needs. In other words, the Central Government's borrowing programme for 1935-36 will not provide for any new money to be raised in the market. The capital works of the railways and other departments would be financed by the accretion in the various funds like the Debt Redemption Fund and Provident Fund and by receipts from Postal Cash Certificates and from Postal Savings Banks Deposits. We do not, therefore, expect that the new loan activity in the coming year can be any other than conversion operations. This must be construed as an important bullish factor in the giltedge situation. For, it must never be forgotten that, while the Government will be calling for no new money from the market, the only savings earmarked for giltedge in this country are of the order of Rs. 20 crores. Investment of these savings could be made only by purchases of one or other of the existing securities.

The exchange market has been absolutely lifeless and featureless. The earlier weeks have been bad enough in regard to business turnover. The current week has been, so to say, worse than the worst. So long as this artificial stringency persists in the money market and so long as this lever keeps pushing exchange to the top level, exporters will not be willing to discount their bills.

The closing rates are: 1s. 6 1/8d., March 15 T.T.; 1s. 6 3/32d., March 16—April T.T.; 1s. 6 1/16d., April 16—May T.T.; and 1s. 6 1/32d., June T.T. and possibly July T.T. Rates for further forward positions are merely nominal.

Bills may be quoted: 1s. 6 3/32d., February; 1s. 3/16d., March; 1s. 6 5/32d., April-May; and 1s. 6 1/8d., June onwards.

Money has been in extreme demand with little or none offering. The quotable rate is 3½ per cent. for call money. Firms' money for call and 3 days' notice may be quoted 1 per cent. One month and two month deposits quoted 1¼ per cent.; threemonth deposits 1½ per cent.; sixmonth deposits 1½ per cent. and twelvemonth deposits 2 per cent.

Have what you like and you will have—
DEWAR'S "White Label"

Clive Street Gossip

Have what you like and you will have—
DEWAR'S "White Label"

As I commence to-day's gossip, it is about the time when the second Board meeting of the Reserve Bank of India will be starting in Delhi. This should prove an important session. By far the most momentous question to be disposed of is the public issue of the Reserve Bank shares. The final draft of the prospectus will be settled ; and the dates for announcing the prospectus and for receiving applications will be decided on. Meantime, the entire country is awaiting the issue with intense eagerness. More than a year ago, I made an appeal that every Indian, who can afford it, should deem it a national duty to apply for five shares and retain them despite the fattest premium which the shares might soar to. May I, on the eve of the issue of the shares, reinforce and re-emphasise that appeal. I do wish that leaders like Mr. Bhulabhai Desai, Mr. S. Satyamurthi and Mr. Jinnah issue, through the press, an appeal to the country that it is only the numberless applications of the far-flung masses which can prevent the possibility of voting rights getting into the hands of a caucus or of vested interests. The Reserve Bank is, in a truer sense, the charter for India's financial Swaraj than the White Paper is a charter for India's political Swaraj. The constitution adumbrated in the White Paper may prove altogether unworkable. It contains an ounce of reforms and a ton of safeguards. Or if I may change my metaphor, its authors seek to apply the brakes before they start the engine. I do not shy at the word "safeguards"; but I do tremble to think of what the future will be with the particular safeguards that have been devised. The best safeguard against the safeguards is that the scheme containing these may refuse to function at all. Such has been, and such remains, my view of the political apparatus. The financial machinery as provided in the Reserve Bank will work, and can be made to work well. Let us, therefore, ensure that this valuable institution starts and functions free from manipulations through improper use of voting rights. We cannot have a broad-based constitution in political affairs. Let us have, as we can have, a broad-based franchise for finance.

My readers may ask me: "You were the one who opposed Sir George Schuster's Bill with vim and vehemence. You carried on a virulent, almost an unseemly, propaganda against the proposals as then adumbrated. You went out of your way, and at the risk of considerable misunderstanding, to coach us Assembly members, inspire minority reports, supply notes for speeches, and influence votes. Not one of your suggestions was accepted. The Bill emerged exactly as Sir George originally planned. It follows that the Act as now passed should be unacceptable to you ; and that the Reserve Bank thus designed should be ill-conceived, ill-planned and ill-working. You now swing round to the other extreme and proclaim that the Reserve Bank can, and will, function well. Where is the consistency in all this ? Or, like Carlyle, do you feel loftily contemptuous of consistency"?

I see, my gentle reader, the force and piquancy of your taunt. But bear with me while I recite a few facts. Let me take you back to 1927—when you and I did not know each other through this thrilling column for the simple reason that *Indian Finance* had not been born then. The most whole-hearted support which Sir Basil Blackett received for his scheme was from the humble writer of these notes. The latter was equally misunderstood then. The stalwart opponents of those days (who turned "approvers" in 1932-33) went about broadcasting innuendoes that the promise of the Deputy Governorship was the motive power of my staunch advocacy. I was jobless then ; but the dream of *Indian Finance* was, even in those circumstances, enough to make me feel that I had as good a job as my heart might desire. The insinuations left my withers unwrung. I was not the galled jade. I am, reflecting on the intrigues of that day, quite proud of the part I played in creating a public opinion in favour of Sir Basil. If, eventually, his Bill was wrecked, it was not the lack of public opinion behind it ; it was the "cussedness" and wanton antics of the Assembly. The heroes, who strutted the Parliamentary stage then, may hang their heads in shame for wrecking a good thing and for preparing the way for the worse thing of Sir George Schuster. The purport of all of which is that the Reserve Bank proposal as such had never a stronger or more convinced supporter than myself. This is Fact Number 1.

Indian Finance issued a Reserve Bank Supplement in the cold weather of 1933. This in itself was conclusive testimony to our realisation of the unique importance of the Reserve Bank. *Indian Finance* did not oppose the inauguration of the Bank. It was all for it. What it opposed was the retrograde features of Sir George's scheme. If these had been eliminated, I would have been jumping with joy. Now that they have not been eliminated, I never suggested that *Indian Finance* would non-co-operate with a Bank planned differently from its own views. This is Fact Number 2.

From the time the Bill was passed, I addressed myself to those features which would mitigate the effect of the reactionary elements in the Act. From this point of view, three questions were of prime importance:

1. The selection of a Governor in whom every section will have confidence.
2. The nomination of a good and strong team of first directors.

PROSPECTUS

Objects.—This Bank was started on 17th November, 1932. The objects of the Bank, as stated in our original prospectus were "to start and work an up-to-date Bank to serve the needs of the Country by incorporating 'the economy and adaptability of the indigenous bankers with the efficiency and modern methods of the western institutions', as recommended by the Central Banking Enquiry Committee. The report of that Committee has further shown the need of careful provisions as regards various matters and these have been considered and special care has been taken to introduce in the Articles of Association suitable safeguards as regards the following matters:—

1. Efficient Management;
2. Restrictions on loans to Directors, Auditors, and Employees of the Bank;
3. Compulsory setting apart of a fixed portion of the net profits of the Bank each year towards the Reserve Funds.

Further, suitable restrictions are provided in the matter of granting loans, especially as regards the nature of the security to be taken and the term of the loan to be granted. Ordinarily, immovable property is not accepted as security except under special conditions. The loans are mostly intended to be short term loans with a view to secure liquidity of funds. The detailed provisions as regards these matters are set out in Articles 4 and 76 of the Articles of Association, which have likewise been framed in the light of the recommendations of the Central Banking Enquiry Committee."

General.—The Directors have pleasure in observing that the above have been carried out to a very large extent. They have worked in perfect harmony with the one object of running the Bank on safe and sound lines. And in so doing no ties of a social or political character have had play. By the Articles, the Directors are prohibited from borrowing from the Bank and they are fortunately above the need of doing so.

The management of the Bank by Mr. S. N. N. Sankaralinga Iyer, has been advantageous to the institution. His services are available to the institution for several years to come under the Articles of Association (Art. 78). His varied and wide experience and the several connections he had formed during his private Banking career have proved of considerable advantage to the Bank in minimising the expenses in the organisation of business throughout South India, and in the acquisition of a valuable clientele in various centres.

Since the starting of the concern, three more Directors were elected, Messrs. K. Subbaiyer and R. S. A. Sankara Iyer, prominent private bankers and Mr. T. R. Venkatarama Sastri, C.I.E., formerly Advocate-General, Madras.

A perusal of our latest audited Balance Sheet and the Directors' Report as on 31st December, 1934, will show the sound policy and the strong position of the Bank.

Increase of Capital.—The Directors have decided to increase the Capital with a view to make it commensurate with the rapidly increasing business of the Bank in all directions.

The meeting increasing the authorised Capital decided that:

The 'C' series shares will be entitled to a tax-free non-cumulative preferential dividend of six per cent. and the 'A' and 'B' series shares will rank *pari passu* for dividend up to 10 per cent., the 'A' series shares alone being entitled to any surplus profits. In the event of a distribution or payment of Capital, the three series of shares shall be entitled to it in proportion to their paid-up capital.

Present Issue.—The 'B' shares are issued at a **premium of Re. 1.**

The 'C' shares are issued **at par** and the calls have been so arranged to suit the convenience of small investors and other members of the public who have fixed monthly income or salary. The 'C' shares (preference) are entitled to dividend in **priority** to the other classes of shares. The dividends are payable half-yearly and free of Indian Income-tax.

Minimum Subscription.—The minimum subscription upon which the Directors may proceed to allotment is 500 shares in each class. As more than that number of shares has already been subscribed, the Directors will proceed to allotment immediately.

Commission and Brokerage.—No brokerage was paid for the 6,250 'A' shares issued. Brokerage at 12 annas per share for the present issue will be paid to recognised brokers and authorised Agents.

Preliminary Expenses.—The preliminary expenses incurred in connection with the opening of several branches have been written off in full. The Directors hope to follow the same conservative policy.

Voting.—Under the Articles of Association of the Bank, every member present in person shall, on a show of hands, have only one vote (except a second vote for the Chairman in case of equality of votes) and every member present in person or by proxy shall on a poll have one vote for every four shares of 'A' series, and one vote for every Rs. 2,500 of paid up amount in 'B' or 'C' series or in both held by him, members owning less than the above not being entitled to vote.

Issue of Certificate.—The Bank shall have three months' time from the date of allotment to complete and have ready for delivery certificates of shares.

Application for Shares. Application for shares should be made in the form prescribed by the Bank, copies of which can be had at the Registered Office of the Bank, all the Branches and recognised Brokers in the City of Madras. The application money may be paid at any of our Branches for credit of the share account.

Allotment of Shares.—The allotment of shares is at the absolute discretion of the Directors and they shall have power to allot all or such number of shares as they think fit.

Copies of the Memorandum and Articles of Association of the Bank can be inspected at the Registered Office, at any time during office hours.

3. Well-spread distribution of shares and continuance of such balanced distribution.

I fought, against powerful and influential forces, to get Sir Osborne Smith as the first Governor. There was, I am sorry to record, sinister intrigue and ugly conspiracy. To the credit of Sir James Grigg, I must also record that, from the moment he set foot in India and set eyes on Sir Osborne, he was fully persuaded that here was the one and only man who could make the Reserve Bank a success. To defeat the conspiracy in powerful quarters was arduous enough. But to persuade Sir Osborne to accept the offer when it was made proved more difficult. Loyalty to the institution which he had served so magnificently and for which he came to cherish a deep love, strong pressure from friends for whose opinion he has great regard, doubts about the uncertain future of a new enterprise—these were the forces I had to deal with in the next turn. Sir Osborne's appointment as the first Governor is, in my view, the most gratifying triumph of *Indian Finance* in its short career.

The next problem was the first Board. We could do nothing save hoping for the best and being prepared for the worst. At the very start, there were considerable dfficulties. The Imperial Bank authorities were sore enough in being coerced into parting with Sir Osborne. But they were particular and rightly so—that the strong directorate that they had should not be disturbed. In other words, the Finance Member was courteously but curtly told that he should find his men in other quarters, than the Imperial Bank Board. While the really eligible men were thus more or less beyond his reach, he was swamped with applications from myriads of aspirants. There were also the usual political influences at work—the communal claims—the hunt for safe men—the reward for services, honourable or otherwise. In such conditions, the problem that confronted Sir James was both embarrasing and perplexing. And everyone will agree that the solution which Sir James has found for this intriguing puzzle is one on which he deserves to be warmly congratulated. That, within a few months of his arrival in India, his judgment about men has been such as to command universal approbation is a happy augury for his regime. He has missed two notable names—men on whom *Indian Finance* was most keen—and he has included a few he might have omitted. But the Reserve Bank, all said and done, is in the safest hands, with Sir Osborne at the helm, and with trusty associates like Sir Purshottamdas Thakurdas, Mr. F. E. Dinshaw, Mr. Shri Ram, Sir Edward Benthall, and Dewan Bahadur Mr. Ramchandra Rao. I shall be the first to acknowledge that I was fearing the worst and am now satisfied that we have been given a far better team than any could have hoped for. I shall also own that men are more important than constitutions ; and the first team which will shape the destiny of the Reserve Bank may be relied on to establish traditions which will improve the old adage and prove that well-begun is well-done.

The next important issue in this regard is the even spread of voting power. Towards this end, *Indian Finance* has repeatedly urged the duty of the public to subscribe for Reserve Bank shares and to continue to hold them. I may now sum up this portion of the argument. *Indian Finance* fought for a good Reserve Bank but, not getting it, is anxious to play some part in the creation of such other propitious factors as would offset the initial defects. This is Fact Number 3. In the light of the facts thus explained, my readers will realise, I hope, that such inconsistency as I may be charged with is only apparent, not real.

I may revert to the main theme of Reserve Bank shares. The position in this regard is thus explained in a pamphlet which an enterprising firm of brokers has circularised to their clients:

> **"The original share capital of the Bank is to be Rs. 5 crores, divided into shares of Rs. 100 each, which shall be fully paid up, the capital being allotted as follows:—**
>
> | | | |
> |---|---|---|
> | To the Bombay Register | ... Rs. | 140 lakhs |
> | ,, ,, Calcutta Register | ... ,, | 145 ,, |
> | ,, ,, Delhi Register | ... ,, | 115 ,, |
> | ,, ,, Madras Register | ... ,, | 70 ,, |
> | ,, ,, Rangoon Register | ... ,, | 30 ,, |
>
> **The Bank shall, as soon as may be, establish offices in all the above Cities, and may establish Branches or Agencies in any other places in India and in London, or elsewhere, with the previous sanction of the Governor-General. A separate issue of shares is to be made in each of the areas mentioned above and transfer can be effected from one Register to another."**

This means that there will be full subscription made up of five shares each if individual applicants in the respective territories are as follows:—

	Applications of five shares each.
Bombay	28,000
Calcutta	29,000
Delhi	23,000
Madras	14,000
Rangoon	6,000
TOTAL ...	1,00,000

One lakh applications for five shares each would ensure that the voting is distributed on the basis of one man, one vote. In a country with a population of 370 million, that is, 3,700 lakhs, is it such an extravagant hope to expect that a lakh of people will be in a position to subscribe for five shares each and will actually do so ?

OLYMPUS

(FROM OUR CORRESPONDENT)

New Delhi 19th.

With the preliminary skirmishes of this session over in the first half of February, the thoughts of the Assembly are turned to the battle royal on the budget: with the debate on the taxation policy of the Government of India our legislators did draw Sir James out; but I have been told by a number of Members in the lobby that they rather regret having done so; for they have given the impression that the present revenue tariff should be overhauled. One of them summed up the feelings of his colleagues thus: "There is a great danger in this proposal for revision. Our revenue tariff, however unscientific, is giving some of our industries a protection which they might otherwise lose. I am loathe to see this indirect protection withdrawn. A scientific system might be made to mean lower revenue duties and a search for excise duties. Is it not wiser to keep quiet till the Federation comes and not give the present Government a pretext to revise revenue tariff and tie the hands of the Federal ministry in this important respect."

* * *

But Sir James Grigg, for his part, enjoyed the debate and, no doubt, he will be able to express himself more fully during his budget speech. When I say, more fully, I do not suggest that the Finance Member will give a discourse on the subject. That way, Sir James is very businesslike. His budget speech will be terse and will not contain any rigmarole in defence of his policies.

* * *

In fact, contrary to the practice of his predecessor, who kept arranging his cards up to the last minute, Sir James is reported to have made up his mind fairly in advance of the Budget date and all his papers are ready for despatch under seal to the provincial destinations. Sir George Schuster established a record for length of Budget speeches. And the new Finance Member, I expect, will establish a record for terseness, that is, compared to the number of statements he has to make.

* * *

"On the eve of Budget" written by *Indian Finance* last week has been scanned here by officials as well as non-officials. The hopes and fears expressed therein may not be altogether belied. In any case, the point of view urged therein has been in the mind of the Finance Department for sometime and one may expect that the expected surplus will be distributed fairly.

* * *

The European Group is hoping to get out of the budget most of what they want. That is why they have kept discreetly silent, unlike previous years, when they never failed to seize an opportunity in the Assembly to have a fling at the Finance Member. But the task of the Finance Member will not be easy, if he accommodates the European point of view and the Lancashire demands. He has, on the Opposition benches, parties pledged to stand by the poorer classes of tax-payers; and if anything is done to remove surtaxes they would insist on raising the minimum taxable to well over 1000.

* * *

The Railway Budget debates will give some idea of the Opposition tactics this session. Already it has been decided by the Opposition parties to reduce the Railway Board demand to Re. 1 and then discuss the other heads on their merits. They will do the same in respect of one of the demands under the General Budget. The question, however, will still remain as to what would be their attitude to the Finance Bill. If Sir James Grigg acts, as did his predecessor, and distributes evenly the advantages of his surplus he may have less difficulty in ploting the Finance Bill. Otherwise he will be in for rough time.

* * *

As for the railway budget, the House hardly felt any enthusiasm when the tale was being told. The style of the speech was very stale and too secretariat-like. The only time that a Railway speech was really well delivered was when Sir Charles Innes presented his first Railway budgt. Since then year by year, these speeches have become less and less interesting till even they have become literally true to a hardened type.

* * *

So far as the merits of the proposals go, there is no doubt that there is not much scope for criticism. The railway finances are being as well managed as they could be expected to be; and the policy of the Railway Board is one of caution in expenditure. No bold experiments are being tried; and every step is being taken after full calculation. The credit for that goes, undoubtedly, to Sir Guthrie Russell and Mr. P. R. Rau who have sound judgment and are not swayed by temporary considerations like cheapness of money to launch on a programme of expenditure which may not be justified on the merits of the case. I would even hazard the opinion that had it not been for the judgment of these two officials, the Railway authorities may have committed this country, at this stage, to an abnormal capital expenditure of many crores, for years.

* * *

An event of exceptional interest occurred here to-day when the Viceroy laid the foundation stone of the Institute of Agricultural Research at a place hardly 3 miles from New Delhi. No administrative decision of the Government has caused, in recent years, greater controversy than the transfer of the Institute. The press was most vociferous in taking sides; and there were more friends of Pusa than of Delhi. Sir Fazli Hussain fought valiantly and had the support of Sir George Schuster who was anxious to spend money on public works and thereby help to create employment among people.

* * *

As ill luck would have it, Sir Fazli Hussain got indisposed and could not be personally present to hear the Viceroy describe the Institute as a permanent memorial to the great work done by Sir Fazli for the industry of agriculture. The site chosen is certainly an ideal one and, in a quarter of a century, the wild ridge surrounding it would probably become a smiling garden.

* * *

So far as the function goes, there was nothing left undone to make it a success; and a new feature introduced was the affixing of postage stamps on the parchment bearing the Viceroy's signature which is burried under the foundation to enthuse and perplex the archæologist of a distant future. The guests had been asked to reach about half an hour earlier than the Viceroy; and almost every one of them felt disappointed that there was no arrangement for tea. Surely in this respect some imagination could have been exercised.

* * *

The poor villagers who flocked in their hundreds were kept at a great distance from the scene of the ceremony and might be wondering as to what this function meant. If the Institute does its work, the villager will reap the reward of improved seed and cultivation. But I doubt if any one among those present realized that this would be so. Nor was any attempt made to make them understand it.

A copy of this prospectus has been filed with the Assistant Registrar of Joint

THE MALABAR STEAM

(Incorporated Under the Indian

AUTHORISED CAPITAL RS. 10,00,000.

Divided into 70,000 ordinary shares of Rs. 10 each and 30,000 6% Cumulative Preference Shares of Rs. 10 each free of Income Tax.

ISSUED CAPITAL RS. 7,00,000.

Divided into 70,000 ordinary shares of Rs. 10 each. Of these 11,500 shares of the value of Rs. 1,15,000 have been already subscribed; 18,500 shares of the value of Rs. 1,85,000 are to be issued as paid up to the vendors. And the remaining 40,000 shares are now offered for public subscription payable as follows:—

Rs. 2-8 per share with application.
Rs. 2-8 per share on allotment.

The balance Rs. 5 per share will be called up as and when required in instalments of not more than Rs. 2-8 per share at intervals of at least three months between calls.

MANAGING AGENTS:

VENKITACHALAM & CO.

PROSPECTUS

OBJECTS OF THE COMPANY. The Company has been formed for the purposes set out in the Memorandum of Association which is annexed hereto and forms a part of this prospectus.

Under the terms of the Memorandum of Association, the Company proposes to take over the business of the Malabar Steamship Company, a partnership business, the partners being Messrs. S. G. Venkitachala Iyer, Piece-goods Merchant, Calicut, Balakisandas Atmaram, Merchant and Commission Agent, Bombay, and G. Parameswara Iyer, Manager, Malabar, Steamship Company, Bombay, and preliminary agreements dated 16-1-35 for taking over the business have already been entered into.

The terms on which the business of Messrs. The Malabar Steamship Company have been contracted to be taken over are as follows:—

The assets of the aforesaid Malabar Steamship Company including its good-will have been valued at Rs. 3,85,000 as shown below:—S. S. "Lalita" Rs. 75,000; S. S. "Janaki" Rs. 2,25,000; S. S. "Indira" Rs. 50,000; Deposit amount paid for S. S. "Flood" Rs. 10,000 and good-will Rs. 25,000.

The said sum of Rs. 3,85,000 which forms the consideration for the sale shall be satisfied (a) by the payment if Rs. 2,00,000 in cash to the vendors, (b) by the allotment of 15,000 fully paid up ordinary shares of Rs. 10 each to Mr. S. G. Venkitachala Iyer. (c) of 2,500 fully paid up ordinary shares of Rs. 10 each to Mr. Balakisandas Atmaram and (d) 1,000 fully paid up ordinary shares of Rs. 10 each to Mr. G. Parameswara Iyer.

Messrs. Venkitachalam & Co., shall be the Managing Agents for a period of 10 years on a remuneration of four annas per ton of cargo conveyed by the Company's steamers and on terms and conditions set forth in the agreement dated 16-1-35 entered into with them.

The Malabar Steamship Company was started in 1928 with a single steamer S. S. "Lalita." The results of the working of the Company were so very encouraging that the number of steamers was steadily increased. S. S. "Janaki" was purchased in 1930 and S. S. "Indira" in 1931. The Company further chartered another vessel by name S. S. H. C. "Flood" in 1934 to meet the trade demands from Tuticorin and Colombo. The good working of these steamers has earned for them high popularity on the Karachi—Malabar—Tuticorin line.

During the last 6 years of its working the Company has gathered valuable experience and it stands to-day as a well-organized and well managed concern. All the initial difficulties and expenses of pioneering the enterprise were met and overcome by Mr. S. G. Venkitachala Iyer, the senior partner of the Company, at considerable self-sacrifice and he is now willing to place the business at the disposal of the public and to share the benefits with them.

The service of the Company now extends to the following seaports: Karachi, Bombay, Mangalore, Cannanore, Tellicherry, Badagara, Calicut, Ponnani, Cochin, Alleppey, Tuticorin and Colombo.

Karachi which has several Flour Mills exports flour in very large quantities to the Malabar Coast and other ports. It has also the largest Cocoanut Oil Mills in India, using large quantities of Copra which is imported from the ports on the West Coast of India and the island of Ceylon touched by our steamers. All trade between Karachi and Bombay and the Malabar Coast, Tuticorin and Colombo is sea-borne, owing to geographical and economic condition.

A regular weekly service on the present line is, therefore, a want which is keenly felt by all the merchants concerned and is shown by the bookings of cargo in the aforesaid steamers, which are generally loaded to their full capacity and which often had to refuse cargo for want of space. Such a service required substantial additions to the existing fleet necessitating the investment of further capital which is ordinarily beyond the means of a single individual. The additional capital required is between 2½ to 3 lakhs which will be utilised for the purchase of another cargo boat.

The management has also investigated the prospects of a passenger service between Bombay and Mangalore and other ports on the Malabar Coast. The Prospects appear to be good and the Directors hope to open a passenger service in the near future with advantage to the travelling public and to the company.

The company also proposes to do business in coal which it is ascertained will yield profitable results.

BANKERS:

IMPERIAL BANK OF INDIA.

AUDITORS:

S. Paramasivan, B.A., G.D.A., R.A., Calicut.
M. S. Seshadri, B.A., G.D.A., R.A., Parli, S. Malabar.

In the light of the experience gained in running the service for six years and on the basis of the estimate given above the Directors hope that under normal conditions of traffic the Company's business will yield annual dividends at about 20 per cent. on the invested capital, after making reasonable provision for depreciation.

Coastal shipping in India appears to have a very bright future before it and a company like the present one is ordinarily bound to thrive and yield good results.

MINIMUM SUBSCRIPTION. The Minimum Subscription on which the Directors may proceed to allotment is 5,000 shares, to the value of Rs. 50,000 and the amount payable on application and allotment is Rs. 2-8 and Rs. 2-8 respectively.

PRELIMINARY EXPENSES. The Company is to pay the preliminary expenses and incidental to, the formation and floating of the Company and the estimated amount of such preliminary expenses is not likely to exceed Rs. 3,000 excluding underwriting commission and brokerage which shall not exceed 2½ per cent.

QUALIFICATION AND REMUNERATION OF DIRECTORS. The qualification of every Director as fixed by the Articles of Association shall be the holding of ordinary shares of the company to the nominal value of Rs. 5,000. Each Director shall be paid out of the funds of the Company as remuneration for his services the sum of Rs. 25 besides travelling expenses for every meeting of Directors at which he shall be present in person. The names and addresses of the proposed Directors are given above.

INTERESTS OF DIRECTORS. Of the directors Mr. S. G. Venkitachala Iyer is a member of the firm of Messrs. The Malabar Steamship Company and interested to the extent that he is a member of the firm of Messrs. Venkitachalam & Co., the Managing Agents of the Company. The other Directors have no other special interest in the Company.

The names and addresses of the Auditors of the Company are as above-mentioned.

The rights of voting at meetings of the Company are, for each share held, one vote, whether preference or ordinary.

A copy of the Memorandum of Association of the Company with the names, addresses and descriptions of the subscribers, is attached to the Prospectus and forms part of it. There are no founders' or management shares.

Copies of the Memorandum and Articles of Association of the Company and of the above-mentioned agreement may be seen at the Registered Office of the Company at any time during business hours, while the list remains open. Applications for shares should be made in the enclosed form and forwarded with a remittance of Rs. 2-8-0 for each share applied for.

If no allotment is made the application money will be returned in full and where the number of shares allotted in less than the number applied for, the surplus will be credited in reduction of the amount payable on allotment and the balance, if any, will be returned to the applicant. The Directors reserve the right to refuse to allot shares on any application without assigning any reason. Copies of the Prospectus and Forms of Application may be obtained at the Office of the Company at Calicut and at the Branches of The Imperial Bank of India.

Dated 5th day of February, 1935.

TRAVANCORE AND THE FEDERATION

(FROM OUR CORRESPONDENT)

Madras, Feb. 19, '35.

It is apparently my turn to repeat the frequent wails of my *confrere* in Bombay, that there is little to write on. Indeed, there has been little doing of late. This part of the country is apparently taking a spell of rest from the hectic agitation about land revenue and resettlements in this or that district. Landed interests will, of course, devote only their leisure hours to the agitation in favour of revision, but when their hands are full with devising ways and means of paying the *kist*, nothing but a hundred per cent. success in such efforts will enable them to pick up again the broken threads of agitation. With landlords as they are, it is no wonder that a week rolls by with hardly any meeting either in the metropolis or the mofussil on this question of land revenue. Even in the city there are traces of the reaction from the excitement of the days when elections to the Assembly or the intrigues of our Party leaders kept the *elite* busy and the people in suspense. Instead of Phillippics against the tax-gatherer or the rival candidate or the abominable importer of Siamese rice, we have now, strangely enough, a cultural twist, if I may so call it, in our thoughts and activities. There is, on the one hand, the sedate and sagacious Sir Sivaswamy Iyer delivering his thesis on the Evolution of the Hindu Ideals of Morality. And those who know Sir Sivaswamy Iyer can to some extent, form an idea of the form and content of his contribution. There is at another end, Sir C. P. Ramaswamy Iyer attempting to conjure up a picture of India as she will be 25 years hence, that is, a period longer than the lease of life that is still left for many of us. There are sundry others speaking on all subjects of the hour. This orgy of speechifying leaves the correspondent of a weekly financial journal cold. One is tempted to wish that the Finance Member here were not so late in preparing his budget and that his predecessors had established the precedent of releasing the budget statement in the middle instead of the end of February.

It would be futile for me, as it would be tiresome for my readers, to fill this page with regrets. If only as a frantic attempt to improve the outlook, I must refer to the glowing report from Cochin of the arrival of S.S. Mulberra from Aden with passengers from England. Perhaps, this strikes many as an inconsequential occurrence, which a correspondent hard pressed for matter, seeks to magnify into an event. But event, it, undoubtedly, is. For it marks the beginning of what is bound to be a prosperous tourist traffic for this *enfant terrible* of India's ports. I have never missed an opportunity to refer to the development of Cochin as a port or the increasing promise of its future. With the inauguration of the scheme for the development of Cochin, even the prosaic South Indian has been stirred into a fit of imagination. The people in and about the new Port often think of the place which Cochin occupies between the old world and the new, and imagine the port of yesterday as the wide *entrepot* of a growing trade in the future. It is not of such stuff as dreams are made of. Cochin's trade has increased from 500,000 tons in 1930-31 to 800,000 tons this year. The number of vessels entering the port has increased from 550 in 1930 to 738 in 1934. It is unfortunate that the third stage of the Cochin Harbour Scheme should have been delayed by a fit of cupidity on the part of the Government of India. It is well that they are showing signs of overcoming such cupidity. But what time the Government are trying to hold up the development of a promising port, the public are giving tangible tokens of their faith in its future. To the large European planting community in and about the Nilgiris and the hill ranges near to it, the Cochin port seems a stepping stone to the high seas that speed them to hearth and home. Cochin is nearer to Aden by a day compared with Colombo, from where the homesick had till now to take the boat. And it is no wonder that in the wake of Mulberra more are coming in!

It should be no matter for wonder that a port of this potentiality should raise questions of diplomacy for the present Government of India and the future Federation. That takes me almost without my knowing it to the memorandum which a Committee of the Travancore State People's Association has published as a result of their enquiry into the J.P.C. report.

Coming from a popular body, the report naturally lays much emphasis on the reactionary character of the J.P.C. reports, so far as the constitution for British India is concerned and on the need for advance towards responsible Government, both in the native states and in British India. The Committee express the opinion that the paramount power is now the only safeguard against misrule and that such paramountcy should, however, be withdrawn as the State makes its progress towards democratic government. In the present conditions, the majority of the native States, they believe, should give every support to the British people in the demand for Self-Government. While this part of the report may be easily guessed, the more important aspect of this report is concerned with the financial settlement between Travancore and the future Federation. They consider that it should be an essential part of any arrangement between the States and the Federation that the representation of the States in the Central Legislature should be not by nomination by the rulers, but by election by the people. The Committee take strong exception to the attitude of the British Indian politicians in the matter and remark that the Joint Parliamentary Committee apprehends that the elected representatives of the Indian States in the Federal Legislatures would make common cause with British Indian representatives.

It is interesting to look into the Committee's ideas on allocation of subjects and sources of revenue. Railways in regard to terminus, they say, cannot be made federal so far as Travancore is concerned as it is at the southern end of the Peninsula. Inland waterways have also to be served as otherwise it would be a source of trouble and inconvenience to traffic. Maritime shipping, coinage, inland customs duties, salt, excise duties, taxes on income and taxes on mineral rights must all be reserved. As regards Federal finance, the Committee point out that it is better to allocate sources of revenue on the basis of the economic and financial requirements of each party and not on the basis of uniformity and equalisation of burdens.

The Committee further think that the additional expenditure in the Central Government involved by the creation of Federation is really only 56 crores besides expenditure involved in giving subventions to deficit provinces and other financial adjustments. The subventions to British Provinces and the pre-federation debts should fall legitimately on British India alone. The Committee observe that Travancore cannot afford to give up the following sources of income: customs (both sea and land) Rs. 43.6 lakhs, Salt Rs. 22 lakhs, Tobacco-excise Rs. 24 lakhs, Anchal Rs. 50,000, coinage Rs. 3,000 and taxes on income Rs. 5 lakhs. The total income of the State is Rs. 235 lakhs and the revenue from the above-mentioned sources amounts to 95 lakhs.

PUBLICATIONS OF THE LEAGUE OF NATIONS

JUST OUT; "STATISTICAL YEAR-BOOK OF THE LEAGUE OF NATIONS" 1933-34

270 pages ... ... in wrappers Rs. 6 14 0
in cloth Rs. 8 8 0

This is the most complete and authoritative international compilation of official statistics regarding the economic, financial and social activities and the population of all the countries of the world.

These statistics including Vital Statistics, Labour Conditions, Production, International Trade and Balances of Payments, Transport, Public Finance, Monetary and Banking Statistics, Prices, Conversion coefficients for weights, measures and currencies, have been brought up to the end of 1933 or the beginning of 1934 and have been reduced, whenever desirable, to a common measure.

The present edition marks an improvement on its predecessor in the abundance of its information on various matters of great topical interest, such as public finance and the distribution of population by age, groups and occupations, etc. Another new feature consists of the tables on the production and use of nitrogen and of index numbers of employment.

"REVIEW OF WORLD TRADE", 1933

A presentation and analysis of world trade in 1933 — about 60 pages ... ... Price Rs. 1 12 0

This volume compares the trade of the world of continental groups and of individual countries in 1933 and in recent years. It shows the contribution of each country to the total, the changes in the direction of trade and in the relative importance of the groups of commodities of which it is composed. The analysis demonstrates that, while the value of trade diminished again in 1933, the quantum increased, mainly owing to the larger exports of raw materials; exports of manufactured products were, however, also slightly higher than in 1932. Special attention is devoted to the trade in the most important crude materials and foodstuffs. An annex contains revised indices of the prices and quantum of the trade of individual countries.

Complete catalogue sent free on application.

(From Our Correspondent)

Thursday, February 21.

The restoration of the salary cut came in for the usual denunciation during the preliminary discussions on the Budget for 1935-36 which shows a deficit of rupees two lakhs. While there was nothing original in the denunciation, the plea of Mr. Freke, the Finance Secretary, was a "new one." It was necessary, Mr. Freke said, to restore the cut in order to remove the sense of insecurity in the services. The cut was originally made under the stress of progressive shrinkage of government revenues and its restoration naturally rests on the financial recuperation of Government. And it cannot be said that the Bombay Government has turned the corner of financial stringency. Its deficit of two lakhs is not due to a return to normal conditions, but to an unexpected windfall in the shape of the proceeds of the sale of securities formerly held in various High Court funds and now transferred to Government. The actual amount is Rs. 27.3 lakhs which reduced a deficit of 29 lakhs to 2 lakhs. The Budget makes no provision for the remission or suspension of land revenue which will be the inevitable sequel to continued depression and the agrarian damage of the recent cold wave. Something of the people's resentment was voiced by a member who suggested that the cuts of salaries that are votable should not be restored. That would hit the subordinate services only and they are not of the elect who are the special care of the Government of India, the Secretary of State for India and Parliament.

The futility of the attempt of the Government of India to reconcile morality with economics was again exposed in the criticism of Government's excise policy which has been described as maximum revenue with minimum consumption. Once upon a time, not long ago, the Government of Bombay was committed to a policy of progressive prohibition. When Government was reminder of that, the House was treated to a series of mental (or is it moral) acrobatics. Dewan Bahadur Kumbli, the official spokesman, took refuge behind the plank of precedent, pleading that he was doing no more than following the direction of his predecessor in 1920. And so ended the first two rounds of the Budget debate, with Government bruised rather than battered.

The fear of overproduction continues to possess Bombay and Ahmedabad mills alike. Six of the seventeen Bombay mills which were working double shift have reverted to the single shift during the last fortnight. They have no prejudices, personal or collective, to the night shift ; but they apprehend that with the rise in the price of cotton and scarcity of staple cotton there will come a day, not remote, when they will have to buy on a rising market. Stocks are diminishing : but cloth is not dearer as cotton is. Curtailed production is the only course, which is approved by half the mills. The Bombay Millowner's Association requires the consent of eighty per cent. of mills to the reversion to the single shift before it can abolish the double shift. Japan is cited as a shining example by double shift suporters, who assert that the double shift is responsible for Japan's production with 100,000 looms against 200,000 looms in India of the same amount of yardage. And our mills are pondering the balance of excessive and restricted production. The mill hand does not come into the picture. He appears on and disappears from industrial schemes as seems meet to industrialists. The reaction on labour of this actual and contemplated change-over is not yet visible : but there is no doubt that it is dormant and may be active at any time.

The Karwar Harbour project was the subject of an interpellation in the Council. The Revenue and Finance member pointed out in answer to a question that there is no agreement between the Secretary of State for India and the Portuguese Government regarding the opening of any harbour in British territory round about Marmugao Harbour. Government did not proceed with the Karwar Harbour Project as it was not considered advisable to incur further expenditure until the trade of the port so developed as to make it necessary to provide increased harbour accomodation. All delightfully indecisive ! Blessed is trade or rather a paucity of it which explains all things to many and many things to all.

Bombay's thirst for water pure and plentiful, raised an indignant debate at a meeting of the Corporation. "One of the first rate civic scandals" is how the water supply of Bombay was characterised by Mr. K. S. Nariman and on that note a resolution was passed unanimously. Not that Mr. Nariman wanted a resolution : he asked for water and got a Committee and his civic wrath waxed scornful. "What the citizens want are not Committees and facts : they want more water : it looks as though we are having more Committees and less supply" was Mr. Nariman's charge and it must be said that he carries public opinion with him. There is discriminatory supply in the city and that it has been allowed so long is a just indictment of the Corporation. Bombay has complained of this discrimination with the approach of the hot months, and has borne with it more in sorrow than anger. Now that Mr. Nariman has brought home to the Corporation its negligence with more than usual venhemence Bombay feels it has made a righteous gesture. Whether we will have more water before another civic outburst remains to be seen.

The educated unemployed in the Presidency constitutes a problem, the gravity of which is taken for granted without any serious attempt to deal with it. Admittedly the problem is not easy of solution ; so many economic, social and even religious factors enter into its composition that its curative treatment is not to be facilely determined. At the same time, indifference is aggravating the difficulties and a Micawber-like mentality of something turning up usually leads ultimately to disaster. The confession of the Minister of Education in Council that Government was aware of the increasing number of educated unemployed in the Presidency, but had not considered any scheme of relief fits into a policy that does not plan. Somebody once said that everything is done by Government too late in India. The neglect of the unemployed bears out that remark. The difficulty of a problem is no excuse for shelving it : rather does it call for considered treatment. To keep out of action, so to speak, a large community of educated men, competent units in any well-conceived economic plan, is not statesmanship. And what is regrettable is that it seems to cause no concern to Government.

(Continued from page 611).

While it may be considered that a state cannot part with such a large slice of its revenue for the sake of being a member of the Indian Federation, it is, doubtless, the duty of the State concerned to point out how exactly it is going to find its quota of the federal expenditure. To suggest, as the State Committee does, that the expenditure of Rs. 56 lakhs consequent on the establishment of the Federation is a purely British Indian liability smacks of the suggestion that the Federation is only the interest of British India and that the State's participation therein is only a matter of obligation to the British Indian Provinces. Even if British India is prepared to give its support, it would still remain for the States to find what amount and how and to what extent they will pay towards the upkeep of the Federation.

PEPPER CRISIS & MONETARY POLICY

ETHICS OF SPECULATION

INADEQUACY OF CHEAP MONEY FOR REVIVAL

By PAUL EINZIG

By Air Mail

Special for "INDIAN FINANCE"

The interest aroused by the gold clause action before the Supreme Court of Washington has been overshadowed during the past week by the series of events which will go down to posterity under the name of the "pepper crisis." A group of speculators made an attempt to corner pepper; they succeeded in driving up the price considerably; but they were unable to unload the huge quantities purchased or to continue to purchase the supplies which were still coming on the market. The result was that three firms in Mincing Lane got into difficulties. The number of failures would have been much larger but for the intervention of the banks, which declared themselves prepared to support most Mining Lane firms affected by the crisis.

In itself, the whole affair is of small importance. The total amount involved is estimated to be under £2,000,000, which is not large enough to make any appreciable difference in general conditions. And yet the affair cast a gloom over every section of commodity and security markets. People asked themselves whether this was not the beginning of a series of crises, just as the Hatry affair was in 1929. It is pointed out by professional pessimists that a position very similar to that prevailing in the pepper market exists also in the shellac market; that a fortnight ago the well-established firm of Strauss and Co. Ltd., suspended payment owing to its commitments in groundnuts and various other commodities; that there is an overbought position in various other commodity markets and also in various sections of the Stock Exchange, especially in the gilt-edged market. The question is being asked in many quarters whether the prolonged period of cheap and plentiful money has not led to a speculative fever that might lead to a truly dangerous position.

The question is of considerable importance since it raises the whole problem of the monetary policy pursued by the Government. Ever since 1932, it has been the declared policy of Mr. Neville Chamberlain to aim at easy monetary conditions. Time after time, he re-asserted his desire for cheap money, though it must be pointed out that he did little more than express a wish for it. No deliberate action was taken by the Government to make money cheap. The reason why interest rates have been low and why funds have been plentiful lies in the prolonged state of depression. Throughout the history of modern finance, depression has always been accompanied by falling interest rates, after the climax is passed for the simple reason that it is difficult to find profitable employment for funds. There was no need for the Government to go out of its way to make money cheaper by open market operations or by an inflationary policy. All it had to do was to refrain from taking any steps to tighten up money. The fact that the bank rate is still at 2 per cent. (against 1½ per cent. in New York) while the market rate of discount is 5/16 per cent. for fine bank bills and 3/16 per cent. for Treasury bills, shows that it is not the official policy that causes money to be cheap. In our opinion, the National Government is not entitled to claim credit for the cheapness of money, but at the same time it should not be blamed for any adverse consequences of easy monetary conditions.

In any case, was the speculative fever, that manifested itself in various unimportant sections of the commodity market due to cheap money? We have seen in 1929 that high interest rates are in themselves unable to discourage speculative fever. Nor have low interest rates in themselves been able to induce speculator to accumulate huge bull positions in, say, wheat or cotton, for the simple reason that these commodities do not indicate any prospects of substantial rises in the near future. If speculators gambled in pepper or shellac, it is not because they were able to borrow at a very low rate of interest, but because they thought it was reasonable to expect a rise in those commodities. If the amount involved in this speculative operation were £200,000,000, then it would be justifiable to regard the gambling fever as a consequence of unduly easy money conditions. As, however, the amount involved was only £2,000,000 it cannot be argued seriously that such an amount could not have been found but for the existence of monetary ease.

Unquestionably, the absence of adequate investment facilities may to some extent be responsible for stimulating speculation. The yield on British Government securities is well under 3 per cent.; and most industrial shares appear to be rather overvalued on the basis of their present earning capacity. In the circumstances, it is not surprising if people, who are not as a rule speculators are inclined to use part of their capital in speculative ventures so as to improve the average yield of the total. It is, however, entirely unjustified to suppose that such speculation is going on a large scale. We are as yet at quite an initial stage of the trade recovery and it is only at its advanced stages that speculative fever of a general character should tend to develop. The present symptoms of speculation in various sections of the market of secondary importance cannot be regarded as an indication that the very modest trade recovery experienced since 1934 is approaching its climax and that it will soon be followed by a relapse.

As was to be expected, economists of the orthodox school are trying to make use of the pepper crisis as an argument against the policy of cheap money. This is only natural for these puritans do not feel happy or safe unless the world is down at the very deepest point of depression. As soon as there is a recovery of 5 per cent. from the bottom, they utter solemn warnings against the dangerous inflationary boom that is going on. To their mind, the sole remedy against the dangers of the boom is to remain in a permanent state of depression. Fortunately, they and their followers represent only a very small fraction of the electorate, and even if their arguments were as right as they are wrong, the Government would have to disregard them. Indeed, it is simply unthinkable that the National Government should embark upon a policy of deflation shortly before the next general election just to reassure these orthodox diehards. Any measure to make money tighter would inevitably be followed by a relapse in trade and this again would drive millions of votes into the socialist camp. It may be taken for granted, therefore, that the policy of cheap money will, therefore, continue, in spite of the pepper crisis.

The conclusion which the National Goernment is likely to infer from the experience of the last week will be totally different from what orthodox economists would like it to infer. It is by now amply evident that the pace at which cheap money in itself can stimulate trade recovery is inadequate. It is equally evident that the prolonged period of cheap money deprives investors of facilities to employ their capital sufficiently profitably. Should the period of cheap money continue for another year or two, without being accompanied by an adequate degree of trade recovery, it is to be feared that the employment of the idle funds

for speculative purposes might increase. In that case, over-speculation might develop even before the stimulus for it is provided by an industrial boom.

The remedy lies in stimulating trade by means other than a policy of cheap money. If there are prospects of reasonable yield and capital appreciation in the industrial market, it will divert funds from speculation in commodities. It is for the Government to provide an adequate stimulus for trade activity in the form of public expenditure on a large scale. There is reason to believe that things will develop in this direction in the near future, and that the policy of cheap money will be supplemented by a policy of public expenditure.

One last word about the moral aspects of the pepper crisis. There has been a great deal of criticism against those responsible for the attempt to corner pepper. Unquestionably, they are guilty of gross miscalculation of marketing possibilities and of supplies. It is, however, absurd to denounce their activities as something essentially immoral on the ground that the rise in the price of pepper penalises the consumer. At that rate, every bull in the commodity market should be branded as the enemy of consumers and every bear should be hailed as their benefactor. In reality, we have seen the price of commodities decline for years; and we have yet to discover that the consumers were any better off in consequence. The fall in the price of commodities was accompanied by a fall in their incomes, which more than cancelled out any benefit derived from cheaper prices. The experience of recent years conclusively proved that, if the raw material producing population is depressed, the rest of the world cannot be prosperous. There is, therefore, nothing immoral in any speculative activity which tends to raise the prices of agricultural products. Indeed, the British Government declared itself repeatedly in favour of a reasonable rise in the general price level. Such a rise cannot, however, take place except through a series of rises in individual commodities. From this point of view, the rise in the price of pepper was in keeping with the general monetary policy dictated by public interest. It is only because it was badly engineered and overdone that the speculative activity leading to the rise in pepper deserves criticism. The operations were harmful to public interests, not because they caused a rise in the price of a commodity but because the rise was caused in a way as to provoke a reaction which had a general deflationary effect.

London, February 12.

MUSINGS WITHOUT METHOD

(By Monodist)

The Congress and the Government live by stealing each other's thunder. The Government used to give pledges about definite progress; and the Congress, not to be outdone, set itself to achieve Swaraj on a settled date at zero hour. Now the British Government are convinced that the Montagu idea of advance, with the eye resting on the clock, is undesirable; and the Congress, too, has given up the hazards of calendared achievement. Fulfilment, according to both sides, is now in the nature of a moveable festival. The Congress next thought of befriending the Depressed Classes; and immediately the Government spread their wings to afford them shelter. Codlin is the friend, not Shortt.

In the struggle for doing good, the *panchama* was dubbed with the name *Harijan*, and both sides paused for breath when the idea of village uplift emerged from the mist. Though the Government did occasionally indulge in the mood of the Good Samaritan and experiment in welfare schemes as at Gurgaon, village uplift on the big scale must be conceded to be a Congress idea; and the Government realizing the change, adopted it as a stunt of their own. The famous Secret Circular of the Government of India about the Village Industries Association of Mahatma Gandhi advises district officials to forestal the move, mix freely with the villagers and claim the squatter's right.

The mutual stealth of ideas did not end there.

Certain people specialized in becoming the friends of peasants; and Acharya Kripalani, Secretary of the Congress, propounded that a "revolution" was necessary. Sir Henry Craik, Home Member, was alarmed at the term "revolution," but when he heard that a social and economic revolution, not amounting to anarchic subversion, had been meant, the Government readily purloined the expression used at some risk by the Congress in the first instance. Sir John Anderson explained that the Report of the Select Committee foreshadowed a beneficent revolution for the countryside; Sir Hyde Gowan, Governor of the Central Provinces, proclaimed that his Government would shortly accomplish a "revolution" through the medium of a bill in hand; Sir Sikander Hyat Khan said in the Punjab Council on February 1, that by the measure before the House, they were enacting a revolution!

When Sir William Harcourt introduced Death Duties in England to the horror of the landed aristocracy, he blandly remarked: "We are all Socialists now!" Socialism was then a noxious doctrine ominous with red ruin and anarchy. In India, officials could now cry "We are all revolutionaries now!" The Government and the Congress are bending over the ryot for his uplift, the former with the additional advantage of the radio. If the Congress workers talk of tanning, officials must be there with the same "ideology." What would have happened to the man that travelled from Jerusalem to Jericho if there were two Good Samaritans fighting over him? If somebody thinks of "slumming," all must go slumming, but the villages in the end remain slumbering as before, once the frenzy of competitive benevolence is over.

The East bowed low before the blast
In silent deep disdain
She let the thundering legions past
And plunged in thought again.

A day's visit to the new Assembly is sufficient to convince one that it is Front Bench talent that determines the quality of a chamber. Personally a clever man, many wondered if Bhulabhai Desai could be an adept in managing followers, but he has begun to exercise a subtle species of fascinating authority difficult to associate with the overmasterful style of Motilal Nehru. Leadership in the Assembly is with him the crown of a well-designed career and he intends to make a success of it. He has a crisp, metallic diction and his turns are most dangerous when he is least vehement. Tactfully he referred at the start to Mr. Jinnah as a mature politician who "in my professional career has often led me at the bar"; he told the Treasury Bench of the ideal of "accepting defeat without rancour and bearing loss without bitterness." He is never in a flurry and he administers hometruths when least expected, as Sir Cowasji Jehangir and Mr. Mody would both ruefully testify.

Mr. Satyamurthi has yet to redeem his reputation. While Bhulabhai speaks to the House, Satyamurthi seems to address imaginary crowds outside. In between comes Mr. Jinnah, as spruce, self-possessed and categorical as ever, with the luck of debating honours on his side. In the debate over the Indo-British Trade Pact, Sir James Grigg remarked that no Indian commodity exported to Britain bore a duty; he was not guarded enough to say that, on the whole, what he had in mind was manufactured goods. Mr. Jinnah eyed the interruption through his monocle, overheard somebody say "tea (or was it "steel"?) and immediately repeated "Tea." The Finance Member blanched; and Mr. Jinnah, divining

that he was right about the accuracy of "tea" in that commercial context, cried "Tea! What about Tea? The Finance Member is silent, eh? Ignorance, ignorance! I say the case of Tea proves it!" It was a comic clash of a regardless interlocution against fortuitous knowledge.

PEPPER LEAVES LONDON HOT

AFTERMATH OF HEADLONG SPECULATION

BANKS MAY TIGHTEN CREDITS

GENERAL ELECTIONS BROUGHT NEARER

By FRANCIS WILLIAMS

City Editor, The Daily Herald, London

By Air Mail

Special for "INDIAN FINANCE"

Everything in the City this week has been overshadowed by the consequences of the failure of one of the biggest gambles in the commodity market in recent memory—that of pepper.

Already three firms including one public company Messrs. James and Shakespeare have failed as a result of this gamble.

But this is likely to be only the beginning of the repercussions of the pepper affair.

The ultimate consequences are likely to be of so serious a nature as to affect many others besides dealers in commodity markets. It is not too much to say, indeed, that the effect of the pepper gamble may be important not only financially, but politically.

The reason for this is the very strong belief, for which I consider, on the facts known to me, there is considerable justification that many more important people than those, whose names have already been disclosed, were concerned in the pepper speculation.

The produce brokers, who have suffered heavy loss in consequence of purchases of pepper on behalf of the so-called Pepper Pool, which is now unable to take up the supplies, are now determined upon an investigation.

As Mr. Bishirgian, the Vice-Chairman of James and Shakespeare and the moving spirit in the pepper operations has also declared that he was acting throughout as an agent, and not as a principal, there are likely to be some very interesting repercussions from that side.

It is probable that the shareholders in this company, who at the moment seem likely to lose all their money, will demand that, if, in fact, their firm was acting as an agent and not a principal, the names of the principals concerned should be disclosed and a claim brought against them. It is probable that they will approach the Board of Trade on this matter and ask for a Board of Trade enquiry.

The effects of such an enquiry depend, of course, ultimately upon the personalities and the position of the principals disclosed as a result of it.

At the moment there is a strong suggestion that a number of extremely important people in the City, including some closely associated with banking were, whether directly or not, concerned.

Bankers generally support the demand for an enquiry on the grounds that the rumours, which are at present going round the City, are damaging to the whole banking system.

In view of this support there is every likelihood that the investigation, when it comes, will be thorough.

If it should show that prominent bankers and other City figures were involved to any extent, we may expect to see some resignations, which can quite legitimately be regarded as sensational. The effects upon public opinion would be of such a nature as to become of political importance, in view of the probability that nationalisation of the banks will be one of the main planks in the next election.

Moreover, as a result of disagreements within the Cabinet centering largely round Mr. Neville Chamberlain's refusal to embark upon an expansionist policy there is a likelihood that a general election may take place earlier than was originally anticipated.

Some time in October is now being discussed as a possible date with a reconstructed Cabinet including, if possible, Mr. Lloyd George—beforehand.

These reports have already led to a decline in British Government securities; and I anticipate the decline may go further both because of the prospect of a political upheaval and of shocks to public confidence following the pepper investigation.

One other effect of the pepper business is important to investors generally.

It is that the banks generally have decided to restrict credit on all speculative accounts.

They are particularly anxious in view of present public opinion to demonstrate that, as a whole, they are opposed to speculation and there is, therefore, likely to be a very substantial tightening of credit during the next few weeks.

All accounts, which are in any way speculative whether in connection with Stock Exchange or commodity dealings, are to be closely examined.

As much of the rise in industrial shares has been due to speculative buying on borrowed money, this may, therefore, very easily lead to a quite substantial setback in markets, particularly when it is combined with fears of an early general election.

I certainly would not, therefore, advise anyone to buy either British Government or industrial securities at the moment. But just as the rise in securities has in a large number of cases, been overdone recently in consequence of speculation, so, selling as a result of the withdrawal of bank credits may lead to a decline in value well below sound levels.

There may, therefore, in a short time, be many excellent opportunities of investment at much more reasonable prices than have been existing recently.

OVERSEAS' NEWS: By Air Mail

GREAT BRITAIN

A POLITICAL TANGLE

The bye-election at Wavertree has been the one topic of conversation in political circles throughout the week. It is generally only at a general election that the different parties take one another's measure. But the peculiar circumstances in the country and specially the split over the India question led to the Wavertree by-election being exalted to the status of a major political struggle. And the verdict at Wavertree serves as an unmistakable reminder of the direction in which the wind is blowing. The "National" Government, never ungrudgingly accepted by the populace, has now reached a stage where its disruption is merely a question of time. And it is hardly surprising that it is so. The impatience of the country at the proud professions and poor performances of the present Government finds expression in the angry heckling of the Premier at the hands of the opposition group. But even if tempers were not ruffled and tolerance prevailed, an intelligent questionnaire should easily succeed in exposing the hollowness of the promises on which the "National" Government sailed into power. Where is the relief for unemployment which a credulous electorate, frightened by the possibility of a crisis which the "National" candidates forecast, were led to expect under the new regime? Where is the improvement in international trade without which Great Britain's recovery is at best only chimerical and unreal? Where is the brighter prospect for peace in Europe as a result of the negotiations by a Government so professedly pacifist in its views? These questions, by themselves, would seriously prejudice the chances of the "Nationalist" candidates in the next election.

But the India question has further complicated matters. It has led to a serious split in the ranks of the Conservative Party and gives rise to the possibility of a purely labour cabinet in the future. In 1931 the possibility was considered very remote but every point in the wheel comes up again. The result of the borough elections was a pointer to, and the result of the by-election at Wavertree was a sure indication of the possible complexion of the future Cabinet.

Those, who were inclined to minimise the strength of the Churchillian revolt, were surprised at the number of votes polled for Mr. Randolph Churchill at Wavertree. Mr. Baldwin, it is said, is considering seriously how he should bring these young rebels to book. But if there are so many Englishmen who back the views of Mr. Churchill with regard to India, what becomes of the much vaunted and frequently professed good-will of Great Britain and the pledges and preambles? It is true that Sir Samuel Hoare reiterated on the floor of the House that Great Britain stands by all the pledges she had given in the past; and yet all the time the ranks of the reactionary diehards seem to swell. It remains to be seen how the next Cabinet, whether Labour or "National" will take up the question of India's political aspirations.

The political situation has become even more intriguing owing to Mr. Lloyd George's suggestions for a "New Deal" for England. The faith of the country in the man who dominated the War Cabinet is still great; and the present Cabinet has discovered to its horror that, while ministerial utterances are not infrequently received with booing or even outbursts of temper, when Mr. L. G. speaks the country listens. It is true that Mr. Lloyd George has not laid down any definite or constructive plan for the economic reconstruction of the country. But he has probably voiced the unuttered wish that things should be reshuffled, if England is to be saved. And it is a recognition of this fact that has led Mr. Macdonald, that master of compromise, to attempt to include Mr. Lloyd George in the present cabinet to silence slanderous tongues. But the malady in the body politic in England to-day will admit of no such easy cure. Besides it is an open secret that L. G. and Mr. Neville Chamberlain will never co-operate on the same Cabinet. It cannot yet be definitely predicted whether the country wants the Chancellor who has balanced the budget and taken 6d. of the income-tax or the man who was at the helm of affairs during the most difficult phase of England's history. In view of these peculiar circumstances, it is not unlikely that L. G.'s suggestion that there should be an inner Cabinet of five to control and direct the policy of the nation shall be given effect to as the least of every alternative evil.

The Air Locarno.

In the international sphere the Anglo-French Air Pact is the burning topic of the week. While it is possible that an agreement like this between two major powers may lead to a more stable equilibrium, it is not without sinister implications. Germany may look askance at this aerial division into diverse camps and Japan has never relished the prospect of a consolidated West. At present the convention is nothing more than a joint Anglo-French proposal and a stout resistance by Germany may prevent its being carried into effect. But the preliminary discussions have helped, to a certain extent, to clarify the atmosphere, inasmuch as they elicited the French consent to the right of Germany to re-arm. In view of this, it is, perhaps, possible that Germany will lend her support to the Pact. In plain language, the convention extends the terms of the Locarno Pact to the case of an aerial aggression. This should placate the alarmists, who are always imagining that an England, shorn of her naval glory and aerial splendour, is purely at the mercy of any power who should choose to attack her by sea or air. While there is general gratification at the prospect of such a powerful aerial alliance, there are also critics who say that it is merely entering into another commitment. The *Daily Express*, for instance, writes that it "alone among national newspapers, raises its voice against the persistent and sinister compact by which the British Government binds us more closely, more strongly and more inescapably to the feuds and wars of Europe." But since peace, in the sense of positive amity between nations, is merely a Utopian dream, peace, in the sense of absence of war, must needs be secured with the help of these diplomatic pacts and conventions. There is a certain amount of truth, however, in the contention that the more delicately adjusted the equilibrium the greater the risk of its being disturbed. Besides, when a real world catalysm arrives, most of these pacts and treaties go by the board and a frenzied world proceeds to undo in a few years the work of decades and centuries. A pact like this, therefore, is nothing more or less than an insurance policy against the accident of war—an accident it is unable to prevent.

U. S. A.

THE GOLD CLAUSE HOLD UP

The delay in the announcement of the verdict of the Supreme Court almost reduces the writing of these columns to a mere formality. For the markets refuse to do any business pending the removal of what they regard as a major uncertainty. But hardly anyone entertains serious doubts as to the extent to which a decision of the Supreme Court can alter the look of things. If the courts should find that

Air Mail Week

Congress is within its powers in altering the value of the currency, it would be as if the case never came up before the courts and the Administration's action were never challenged. If, on the other hand, the Supreme Court were to be imbued with a Pharisaic sense of its importance as a defender of the whole constitution, and should find, in such a spirit that the action of Congress was unconstitutional and that the Administration should be called upon to pay the full gold value of the bonds, then, it is more than one can believe that Mr. Roosevelt will take such an order lying. Knowing as we do the strength of purpose and determination of the President, such a decision of the Supreme Court might well proviide for Mr. Roosevelt the opportunity to prepare a far-reaching scheme of change in the American constitution. If, however, there should be other loopholes by which a fresh enactment of Congress would overcome the difficulties, the President might be relied upon to utilise it. In, any case, it is unthinkable that the Administration would consent to abide by such an adverse decision of the Supreme Court.

One has only to think of the consequences of an adverse decision to rule out the chances of its coming into effect. The profits on revaluation of the dollar would be wiped out. The Equalisation Fund would be depleted, the Public Debt will increase by 10,000 million dollars, and if private bond holders are also brought within the scope of this new finding, a much more staggering amount will be involved. Besides, the entire programme of national recovery rests on the devalued dollar. No one in America can miss these arresting facts ; and yet it is difficult to pretend that the matter is not before the Supreme Court or that the Supreme Court will act with the personality of Mr. Roosevelt, and not the letter of the law, in their mind.

It is, perhaps, useful now to point out in some detail the celebrated gold clause which has brought about a situation which had its parallel only in the dark days of the Civil War. There are four cases which the court will probably deal together in their judgment :

Case Number One concerns a Baltimore and Ohio Railroad Bond held by a Mr. Norman C. Norman. The coupon calls for a payment of $22.50 in gold. Mr. Norman demands $39.10 in devalued currency, whereas the company is prepared to pay only $22.10. Lower Courts have upheld the company's refusal to pay the extra $16.10.

In Case Number Two, the Bankers Trust Co., of Manhattan, as trustee for an Iron Mountain Railroad Gold Bond issue, demands payment of $1,690 in devalued currency for every $1,000 Bond. The demand has been refused by the lower Courts.

Mr. Nortz, in Case Number Three, was the owner of $106,300 U.S. Gold Certificates, which the Treasury had promised to repay on demand in gold coin. Mr. Nortz, after being compelled to hand over the certificates in exchange for devalued currency, sued the Government in the Court of Claims, which immediately passed the case on to the Supreme Court without giving judgment.

In Case Number Four, a Mr. Perry demands $16,900 in devalued dollars for a Liberty Bond which specified repayment in gold.

It will be seen that the first two cases are those of holders of private bonds, which leave less room for doubt as to the finding of the Supreme Court than the latter. The view has been expressed already in these columns that a distinction might well be made between bonds, to which the Federal Government are a party, and bonds, which represent contracts between private individuals and, as such, are more susceptible to alterations by Congress. It is only in regard to the last two that nice points of constitutional law would arise, for, throughout the argument before the Supreme Court, the authority of Congress to change the legal tender was not questioned. But what makes even this question doubtful is the sheepish, apologetic attitude taken by the Council for the Administration who endeavoured to rest the whole case on the magnitude of the effects of an adverse decision. It is difficult for a layman to go into the intricacies of the law. But commonsense suggests that the Supreme Court will also have to weigh the consequences of its decision. However legally minded the judges may be, they cannot altogether overlook the fact that the whole nation and the President want a devalued dollar and that an adverse desision of the Court might, conceivably, have the effect of creating a political crisis. If the existing law were such as to point to the unconstitutional character of the Congress legislation in this regard, the Supreme Court might also try to find ways and means of reducing the practical consequences of such a finding.

Outside of the markets so called, which are now reduced to a state of utter inactivity, there is little of interest during the week under review. Mention may, however, be made of the extention of the automobile code which was due to expire and which has been extended to June 16. This action of the N.R.A. officials has provoked Mr. Green, the President of the Federation of Labour to announce that he has not accepted the code, and will not, as the Federation was not consulted on this matter and it must on that account be regarded as an imposition from outside. This raises the fear that the automobile industry is in for another period of strikes and lockouts. Only the future will show whether there is room for reconciliation or whether labour will pitch itself against the Administration and the employers. But there is one good point in the new code, as at the time of the extension the President expressed his desire that employers should do as much as possible to provide a stable employment and reduce the seasonal character of this movement. It is to be hoped that another crisis will not be precipitated and that this time Mr. Roosevelt will interfere in the disputes of employers and employed before the final hour.

The new Banking Bill has raised a storm of opposition in Congress. Even Senator Carter Glass has promised to oppose it openly. Those, who are familiar with the provisions of the Bill, can guess that the objections of these sections of Congress is based on the ground that the new provision will tend to render the Reserve System altogether frozen. The Bills, in fact, means a centralisation of the federal reserve system in the hands of the Treasury. For the entire administrative power is to be placed in the hands of a Chairman, over whose appointment the President will have a veto. The national banks will be empowered to use a large part of their funds for investment in real estate mortgages. The reserve banks have power also to discount anything they choose. The provisions in the old Act, which stipulate the collateral requirements of the Federal Reserve Systems are to be repealed. The Bill also provides for the dismissal of the existing governors of the Reserve Banks and for the appointment of new ones with a view to ensure more liberal advances to the public. The standpoint of the Treasury in this regard should not be difficult to understand. The banks have in the past been such a stumbling block to the President's policy of liberal financial aid for industry, that, if his objections are accepted, it cannot have much valid objection to the supercession of the present governors of the present Reserve Bank system with others who will command the same enthusiasm for the new policy. But the opposition to the Banking Bill is on two different grounds. One section is opposed to the centralisation of power in the hands of the Treasury. The other objection is more technical, as it is directed against the possibility of the assets of the Reserve

Air Mail Week

Banks being rendered less and less liquid. It is understood that the banks have at last been roused over the new Banking Bill and that they may be able to muster more support in the Legislature. But the President has always been able to size up the strength of the bankers and it is by no means impossible that the present opposition will only have the effect of increasing the number of the President's triumphs over the banks.

GERMANY

TWO YEARS OF NATIONAL SOCIALISM

The Nazis have completed the second year of their power over Germany. When they gained ascendancy in the affairs of the State, Hitler and his followers promised a complete rejuvenation of the nation. Addressing the people on October 14, 1933, Chancellor Hitler said that the National Socialist Revolution had but one aim—"the restoration of order in our country, the providing of work and bread for our starving masses and the proclamation of honour, loyalty and decency."

The attentions of the National Socialist Government were directed first to the problem of unemployment. Since 1929 unemployment in Germany had been increasing year by year to more and more alarming heights. While the average number of unemployed was 1.9 millions in 1932, it increased to 3.1 millions in 1930, to 4.5 millions in 1931, and 5.6 millions 1932. At the end of December 1932, there were 5.8 million unemployed and at the beginning of 1933 6.1 million workers lacked occupation. There are the figures given by the Reich Minister of Labour, and are thus authoritative. More than 6 million unemployed means, if the figures for the families of these unemployed men are included, that nearly one quarter of the entire German nation had become dependent upon the State for support. There was hardly a single family in Germany which was not suffering from unemployment. The general distress had penetrated into every home and public expenditure on the relief of those in want assumed enormous proportions. During the financial year 1932 the State had to spend more than 3 milliard marks on unemployment. With a magnificiently worked out programme, the Reich began to tackle this problem. Private undertakings are being assisted by a lightening of taxes. The State Railway and the Postal Department are providing on the native soil a living for many of the unemployed and the Labour service is taking away the young men who had no work from the cities and providing them with a common work and a common aim. It is not only the Government that are helping towards the reduction of unemployment. All are helping.

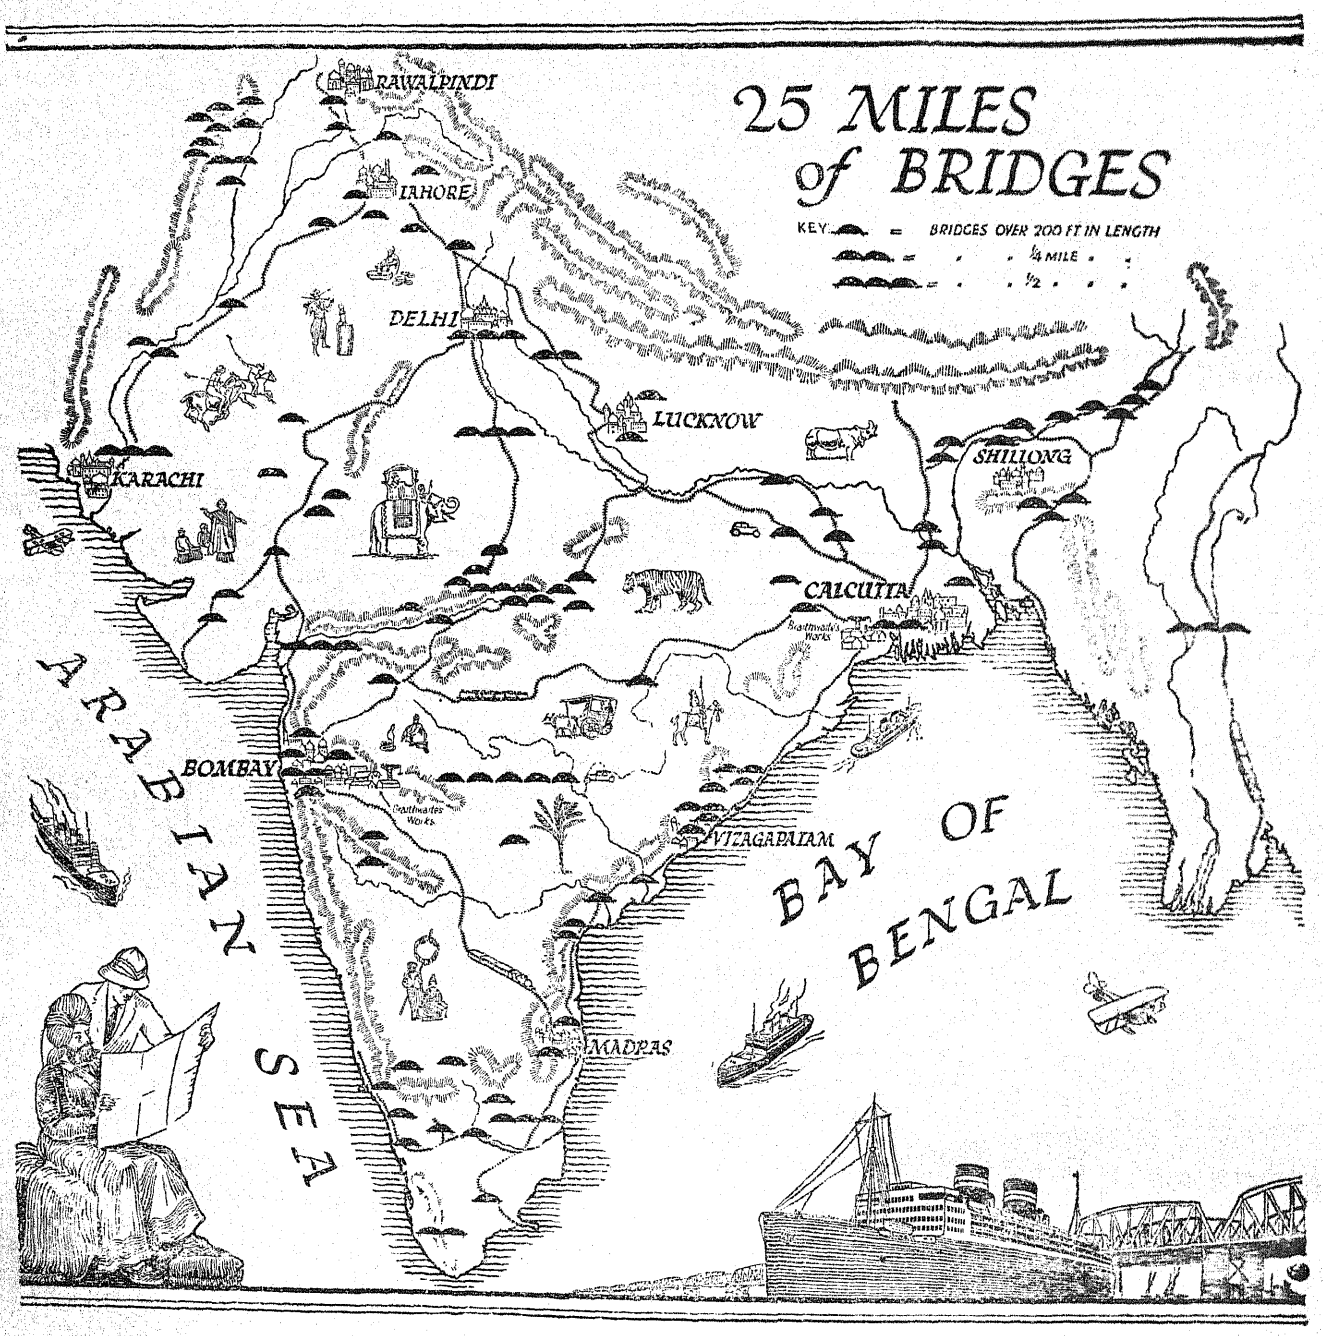
As a result of this organised attack on unemployment, the total number of workless has shown a steady decrease. From 5,360,000 at the end of November in 1932 the figure has come down to 3,715,000 at the end of November in 1933. Uupto the end of 1934 the number of jobless had decreased to about 2,335,000, that is, recorded a drop of 1,360,000 in a period of twelve months. At the present there are more than 15,100,000 wage earners and salaried employees who are engaged in regular work. This is according to one report about 1,700,000 more than a year ago, and 2,500,000 than at the end of 1932. This increase in the regular employment made possible a reduction of substitute employment such as labour service, relief workers etc., which was especially encouraged in the earlier part of 1933. The results thus achieved cannot be considered unsatisfactory.

The effects of this vigorous employment creation programme were felt in other spheres of activity. In the domain of domestic trade there was a great revival. The building industry in Germany had made a rapid advance during the year 1934. About 50 per cent. more dwellings (apartments in apartment houses and separate houses) were constructed in 1934 than in the year 1933 and according to the rough estimates there were about 300,000 new and converted dwellings were finished as against 200,000 in 1933 and approximately 160,000 in 1932. From being concentrated in the large cities the new revival in the building industry has spread to the middle sized and small cities in the interior. According to the weekly report of the Institut fur Konjunkturforschung the new dwelling projects begun during the year 1934 in cities with more than 50,000 inhabitants was 36 per cent greater than in 1933; but in the cities with from 10,000 o 50,000 inhabitants it was approximately 60 per cent. more than in 1933.

Side by side with this revival in the building and construction industry, there has been a period of prosperity for the concerns dealing in construction machinery. There has been a heavy increase in the orders placed for the machinery and the heavy stocks that most of the concerns had accumulated with them during the relative prosperity of 1927-29 were speedily absorbed. More particularly the expansion o the industry is noticeable when machines are used for road and canal construction. Increased orders were recorded for concrete mixing machines, street rollers, gravel machinery, hoisting apparatus for building, finishing machine for street paving etc. For along with construction of buildings and public works programmes, the scheme of motorisation of roads formed an important plank in the Nazi platform. Motorization has come to be the keyword for the new policy. The abolition of the motor tax for new cars has led to great activity in the motor industry. Tourist traffic is being reorganised. These and similar schemes have resulted in an enormous increase in the prosperity of the motor and allied industries. According to the preliminary investigations the total number of automobiles licensed in 1934 was 130,938 which is about 60 per cent. more than that in registered in 1933. Truck sales which were 22,731 in 1933 have more than doubled. The new large motorcycles put into use were 27,977 which is 57 per cent. more than in 1933.

In general there has been in evidence a uniform rise in production in other industries. German factories as a whole, are now producing 50 per cent. more than what they were doing in the previous year and 50 per cent. more than in 1932. Goods to the value of about 4,400 million R. M. are being produced monthly as compared with 3,550 millions a year ago and 2,900 two years back. There has, of course, been a set back in the general prosperity during the winter months when, fearing a shortage of supplies of raw materials and foodstuffs, there has been a curtailment in all activities. This is only a temporary phase and should not be taken to discredit the Nazi regime. There has also been an uniform maintenance of the internal price levels without undue fluctuations during the year. When prices tended to rise in the winter months and when hoarding was resorted to by the commercial community, the Government by a set of stern legislative enactments penalised all attempts to increase prices. There might have been divergencies between the world and local prices; but this discrepancy cannot be avoided as long as the various exchange restrictions and the import regulations exiist side by side with the national policy of internal reconstruction.

Thus the year 1934 on the whole meant for Germany a great step forward on the way out of the depression.



On the map are shown the 116 most important bridges out of the 196 which Braithwaites have built in INDIA between 1923 and 1932.

JUTE AND JUTE GOODS

JUTE

Calcutta, Feb. 21.

Easier conditions have ruled in the raw jute market during the week under review and prices for futures on the whole were lower than what they were during the previous week. The highest and the lowest quotations for March futures were Rs. 33 and Rs. 32-2 respectively. Technically, the market is long bull for a considerable time and the aggregate volume of the contracts in futures is supposed to be largest in the past few years. This is due to the anticipated reduction in the acreage under jute. Thus the holder is always inclined to take profit at every rise. Recent rains reported from the low lying jute area had a beneficial effect for the proportion of sowing and consequently a fall was noticeable on the market. At the moment there is not much fear for prices going down, but any advance is equally out of the question pending the actual results of sowings.

Business in ready Firsts was done at Rs. 31 with sellers over at this price towards the close. It is feared that after the February business is over this week a small decline may further take place next week. Mills were not much interested this week, the goods market being comparatively easier.

East India Jute Association's report dated 19, was :—

Market is ruling quiet but steady.

Opened	...	...	...	...	Rs. 32-8
Lowest	...	...	...	...	,, 32-2
Highest	...	...	...	...	,, 32-8
Closed	...	...	...	...	,, 32-6

Imports and exports on that date were 9,000 maunds and 6,000 maunds respectively, stocks being estimated at 702,000 maunds compared with 1,000,000 maunds some date last year.

JUTE MANUFACTURES

Calcutta, February 21.

A easy tone has prevailed in the hessians market and price for ready nine porter has declined from Rs. 9-8 to Rs. 9-5 per hundred yards. The decline was due to heavy bull liquidation and want of business from the consuming centres. The gold clause decision made no appreciable change in the situation.

Heavy goods market has likewise ruled in sympathy with hessians. The general tone of the market is easy and a further small decline will be no surprise to the trade. Buying on the basis of Rs. 9 as bottom for the time being will not be any way disadvantageous.

Memo of total reported sales for the week ending Saturday the 16th February, 1935.

COTTON AND COTTON GOODS

COTTON.

Calcutta, February 21.

There has not been any wide change in the price of cotton during the current week, Broach April-May remaining all along in the vicinity of Rs. 250. Taking the trend of American markets in general and local ones in particular there is not much room for any appreciable decline in the near future. The Indian cotton crop being satisfactory and the technical position long bull, one will not be surprised if the market shows some weakness on profit-taking. Shifting of contracts from April-May to July-August may gradually proceed and this will in all cases ease the near position and strengthen the forward one.

Placidity marked the Bombay position last week. Although Japanese houses operated in the futures market for contracts, principally Oomras, the market remained quiet in the absence of trade demand and Broach for April-May delivery was quoted at Rs. 246 as compared with Rs. 252 the week before. Arrivals in the Broach district are increasing and confirming the early estimates of damage.

Bengal styles are attracting attention on the Bombay spot market, being quoted on a very wide difference relative to Broach, as there is an export demand for the cotton.

Messrs. James F. Hutton & Co., Ltd., Manchester, in their report dated February 6, state:—

The world consumption of American cotton continues to lag behind the figures of 12 months ago. The latest figures for shipments so far this season give 2,991,000 bales as compared with 5,020,000 a year ago. All countries are taking less American cotton and more outside growths, especially Brazilian and Indian. Demand has continued disappointing and shows few signs of broadening in the immediate future. There has been a marked lack of confidence on the part of buyers generally. There has been more inquiry from India, but the bulk is regarded as "price-testing" and the turnover has been far from satisfactory. Some of the offers have been 10 per cent. too low. Odd transactions have been arranged in light fabrics, prints and fancies for Calcutta, Karachi and Madras, but little has been heard of the up-country outlets. The Empire markets, including Australia, New Zealand and South Africa have given some support in fine cloths and specialities. Little has been heard of China, whilst the Far East generally has been very quiet. Beyond a few small lots of prints. West Africa has done very little, but a rather better inquiry from South America, covering a variety of fabrics, is expected to result in business. Business for Home Trade has been confined to very narrow limits. The value of cotton reports from United States during the first ten months of 1934 was, according to the Federal Reserve Bulletin for December, about the same as 4 year ago, but the quantity shipped declined by 28 per cent.

Total raw cotton imports into United Kingdom during 1934, according to Board of Trade returns, were valued at £34,982,000 as compared with £35, 889,000 during 1933 or in terms of value about 2.6 per cent. less than last year, the distribution among chief exporting countries being:—

	(In thousands of £) 1934.	1933.	Gain or loss on 1933. %
U. S.	12,219	17,923	− 31.2
Egypt	8,520	9,582	− 11.1
Brazil	3,750	321	+1,068.2
British India	3,118	2,192	+ 42.2
Peru	2,543	2,292	+ 10.9
Argentine	1,215	577	+ 110.5
Anglo-Egyptian Sudan ...	1,768	1,248	+ 41.6

The United States Department of Agriculture estimates world production of all cotton growths in 1934 at 23,000,000 bales compared with 21,000,000 bales in 1933.

According to the *Asaka Mianichi*, Japanese spinning mills must buy well over 2,000,000 bales of Indian and American cotton to cover their 1935-36 requirements, and Japan will have to buy about 1,400,000 bales of the Indian produce.

COTTON PIECEGOODS

Calcutta, February 21.

Nothing of interest occured in the local market which had, if anything, a weak tendency during last week. Slack demand lowered prices, though no business took place.

Much the same conditions prevailed in the Bombay market, dealers having to be satisfied with very meagre trade.

Manchester reports a quiet market, though prices are said to have been well maintained. In view of high ruling rates and the bare margin retained by makers to induce trade, there is no likelihood of material improvement in price.

Japanese interests fared no better than Indian and British. The forthcoming Budget, though it may have nothing to affect the cotton market, urged caution.

BULLION

GOLD

Calcutta, February 21.

A steady tone is reported in Bombay at the week-end, the price of ready advancing from Rs. 35-0-6 to Rs. 35-2-6 and closing at Rs. 35-6-6. In the absence of stimulating foreign advices, prices eased over the week-end on considerable selling pressure. The Gold Clause decision, with a consequent strengthening of the franc, had an appreciable effect on the Bombay market. The daily offtake is unchanged at about 3,000 tolas while stocks on February 15 totalled approximately 3 lakhs tolas.

In London gold values rose from 142 shillings 2 pence to 142 shillings 6½ pence. The highest and lowest rates were Rs. 35-2-6 and Rs. 35-0-6 for ready, Rs. 33-3 and Rs. 35-1-0 for February 19 settlement and Rs. 35-4-0 and Rs. 35-2-0 for March 22 settlement.

Total imports during the week amounted to Rs. 33,057 in bar and coin.

Total imports from the United Kingdom during the week ending February 8, amounted to £5,481,000 of which £4,728,000 was shipped to the United States and £616,000 to France. Total imports into United Kingdom during the same period amounted to £3,443,000 of which Africa contributed £1,461,000 India £872,000 and France £836,000.

The aggregate gold in London banks at the end of January is estimated at £200,000,000.

The total Rand gold output in December, 1934, amounted to 886,037 fine ounces compared with 878,847 ounces in November and 894,156 ounces a year ago. The total production in 1934 was 11,017,493 ounces compared with 10,486,333 ounces in 1933.

Gold reserves in important countries in terms of American dollar at the end of November, 1334, calculated by the Federal Reserve Bank are :

	(In millions of dollars.) Nov. 1934.	Charge in Nov.

SILVER

Calcutta, February 21.

There was an upward tendency in the market following occasional selling during the past week, as nothing definite is known about a reduction in the Indian import duty.

In Bombay prices remained on a rising level after opening at the week-end at Rs. 61-6. A fair amount of business went through for near and forward delivery. March delivery was quoted at about Rs. 5-2 higher than that for ready delivery.

Stocks on February 15 were about 22,000 bars and the daily offtake is about 20 bars in Bombay.

In Shanghai the dollar rose from 1s. 5¾d., to 1s. 6d., London quotations remaining practically unchanged at 24s. 7/16d. for ready and 24s. 9/16d., for forward. Should, as is rumoured, America adopt measures of inflation prices will harden.

A Reuter message dated February 17, states that it is authoritatively learnt that an announcement will shortly be made that silver imported into China will, in future, be earmarked, and allowed to be re-exported, after six months, without payment of export duty or equalisation charge. Thus there will be two kinds of silver in China, as the silver already here is still subject to duty. This is expected to ease the present tightness of money.

Total exports from United Kingdom during the week ending February 8 amounted to £1,293,000 of which £1,261,000 worth was shipped to United States. Total Imports into United Kingdom during the same week amounted to £91,000.

The London market was quiet and steady.

London Air Mail week:

The market continued to be affected by the nervousness obtaining in other markets and owing to further re-selling prices showed a tendency to sag. Buyers showed more reluctance and although some purchases were made for America these were less in evidence during the past week. Speculators and the Indian Bazaars resold, but the latter have also made fresh purchases; China also resold, but business with this quarter was restricted owing to the Chinese New Year holidays.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 28th January to mid-day on the 4th February:—

TEA

Calcutta, February 21.

At the Tea sales on February 19, there was a moderate export demand, the selection having been mainly "end of the season" types, with prices generally about 3 pies per lb. lower than those of the previous sales.

For internal consumption a better market prevailed and prices were maintained for most leaf and broken grades. Dusts sold well; but Fannings were not fancied.

The following are the full particulars of Sale No. 34.

Tea with Export Rights.	1935	1934
Offered	9,613	3,880
Sold	9,240	3,800
Average	0-6-7	0-10-9

Tea for Internal Consumption.

	Leaf		Dust	
	1935	1934	1935	1934
Offered	6,022	7,132	3,945	3,901
Sold	5,683	6,011	3,921	3,449
Average	0-5-1	0-5-11	0-4-11	0-8-2

The following are the quotations:—

Tea with Export Rights.

	19th Feb. 1935	20th Feb. 1934

Tea for Internal Consumption.

	19th Feb. 1935	20th Feb. 1934
Common Broken Pekoe Souchong ...	5 0	5 0 to 5 3
Common Broken Pekoe ...	5 0 to 5 3	5 9
Common Pekoe ...	5 6 to 5 9	6 0

India

At the London auctions on February 18, 23,900 packages of Indian tea were submitted for sale.

There was a good demand with a firm tone.

The following were the lowest prices fetched during the day's auction:—

Common Pekoe last auction 10d., to-day's auction 9¾d. lb.; Common Broken Pekoe last auction 10d., to-day's auction 10d. lb.; Common Orange Pekoe last auction 10¼d., to-day's auction 10d. lb.; Common Broken Orange Pekoe last auction 10¼d., to-day's auction 10d. lb.

The following were the value prices:—

Clean Common Pekoe last auction 10d., to-day's auction 10d. lb.; Clean Common Broken Pekoe last auction 10⅛d., to-day's auction 10⅛d. lb.; Clean Common Orange Pekoe last auction 10⅛d., to-day's auction 10⅛d. lb.; Clean Common Broken Orange Pekoe last auction 10⅛d., to-day's auction 10⅜d. lb.; Clean Common Broken Pekoe Souchong last auction 10d., to-day's auction 10d. lb.

Ceylon

At the London auctions on February 19, 18,400 packages of Ceylon tea were submitted for sale. There was an active demand at firm rates particularly for better qualities. The demand for export was more in evidence.

The following were the lowest prices fetched during the day's auction:—

Common Pekoe last auction 10d., to-day's auction 10¼d. lb.; Common Broken Pekoe last auction 10¼d., to-day's auction 10d. lb.; Common Orange Pekoe last auction 10¼d., to-day's auction 10¼d. lb.; Common Broken Orange Pekoe last auction 10¼d., to-day's auction 10¼d. lb.

The following were the value prices:—

Clean Common Pekoe last auction 10¼d., to-day's auction 10¼d. lb.; Clean Common Broken Pekoe last auction 10⅛d., to-day's auction 10⅜d. lb.; Clean Common Orange Pekoe last auction 10⅜d., to-day's auction 10⅜d lb.; Clean Common Broken Orange Pekoe last auction 10⅛d., to-day's auction 10⅜d. lb.

Imports

Imports of tea of all kinds into the United Kingdom, during the month of January, 1935, compared with the previous month and with January, 1934, were as follows:—

	Jan. 1934 lb	Dec. 1934 lb	Jan. 1935 lb
From British East Indies (except Ceylon) ...	29,125	41,590	29,511
From Ceylon ...	13,133	11,216	11,129
From China (including Hongkong and Macao)	634	312	155
From other countries ...	4,196	4,650	4,004
Total amount in Stock ...	...	...	305,422

(000's omitted).

Exports

The Exports of the Indian Tea from Northern Indian from 1st April to 19th February have been as follows:—

	Season 1934-35	Season 1933-34	Season 1932-33

SUGAR

Calcutta, February 21.

The local market was easier at the week-end with a downward tendency in ready and near arrivals, towards positions remaining steady. Weakness in ready and near arrivals was caused by pressure of sales of Java sugar. The steadiness in forward positions was principally due to enquiries from outside at current prices.

Bombay reports that during the week there was a decline of 2 to 3 annas per cwt. in ready Indian sugar caused by a sharp decline in ready Java and heavy arrivals of Indian sugar, most of which had to be held up owing to poor offtake. The Bombay market is likely to remain steady for ready and near arrivals. In regard to forward positions, uncertainty will continue till the central Budget is announced at the end of the month.

Recent negotiations by U. K. and Continent to sell British refined and French crystals in this market proved fruitless, but met with success at Karachi where offices sold about 1,500 tons French crystal at around Rs. 3-12-6 and 3,000 tons British refined on the parity of Rs. 4. More reserve is shown from these sources, which probably acounts for the maintained limits by Java mills in view of the sales at Karachi.

Stocks at Bombay at the end of last week were estimated at 3,200 tons compared with 4,500 and 4,000 tons during the corresponding period of the two past years respectively.

Messrs. Bird & Co. in their weekly summary of Market Intelligence, dated 16th February, write :—

Calcutta.—The small stocks reported in our last week's report have further dwindled during the week under review, there has been no demand to speak of and so prices have not advanced. Importers and stock holders are still very reluctant to make any sale at the moment in anticipation of a better demand later on. No demand is reported for forward positions except for small parcels of special grades.

Importers are very reserved and are not willing to negotiate any further shipments to the port, until something definite is known about any alteration in the Import Duty.

The Indian sugar market opened quietly but later on a fair turnover of second-hand sales for ready stock is reported at slightly better prices, but until there is a very real improvement in demand the market is bound to remain quiet. During the week no forward business was transacted at all, but a fair amount of second-hand business for forward positions is reported locally by some dealers who are willing to sell subject to any increase or decrease in duty being borne by the buyers, as these are of the opinion that there will be no change at all in the Excise Duty.

As there would appear to have ben a slightly more confident tone in the market at the close, an improvement in demand may be expected in the near future.

Bombay.—The Java sugar market in Bombay did not show any improvement for ready or near positions but on the contrary values showed a decline of about 4 pence per cwt. This easier tendency was chiefly due to the heavy arrivals during the week which are estimated to be approximately 2,000 tons while demand from consuming centres was rather disappointing. The forward positions are, however, reported to be firm with a slight improvement of about ¼d. per cwt. for Java white sugar on account of steady enquiries from outsiders at current rates. The importers showed no desire to quote below Java parity which is about two to three annas higher than the rates prevailing in the market, with the result that practically no direct business could be booked with the exception of a small quantity for outports for steamers afloat. The outsiders are reported to have taken advantage of the situation by accepting business at current ruling rates.

The market for Indian sugar also declined by about two to three annas in sympathy with the Java market coupled with the discouraging reports from Cawnpore. The arrivals are reported to be heavy, approximately 900 tons as against 800 tons reported last week.

The poor offtake is engaging the attention of stock holders who have to store most of their arrivals.

Jamnagar and Bhavnagar.—The market during the week under review suffered from large stocks, large quantities afloat, and very poor demand, with the result that prices dropped considerably. Local and up-country buyers have realised that importers must liquidate a certain amount of their present stock to enable them to make financial accommodation against their immediate arrivals, and so have refrained from buying in the hope of obtaining still lower prices.

Jamnagar.—In this port stocks were augmented during the week by 25,000 bags ex the s.s. *India* and the s.s. *Nirvana* was due at the end of the week with a further 8,000 bags approximately. It is also rumoured that the s.s. *Rajput* is due in before the end of the month but the quantity is not yet known. Stocks are estimated at about 43,000 bags.

Bhavnagar.—This port reports very heavy arrivals during the week. The s.s. *India* brought 20,000 bags. The s.s. *Nirvana* is expected before the close of the week with a further 20,000 bags and the Java market was further depressed by the arrival of 10,000 bags of British Refined sugar by the s.s. *Mirza*. Stocks are expected to be about 50,000 bags at the close of this week.

Delhi and the Punjab.—The Delhi and surrounding markets report no further change in conditions with the exception that stock holders, although anxious to liquidate, are unwilling to reduce their selling limits any further.

The buying activity is conspicuous by its absence on account of the uncertain trend of the trade at present except for day to day requirements.

Further North the market is reported to have shown some signs of improvement on account of the general belief of the dealers, that the present sugar season will be shorter and consequently the production will not be as much as was anticipated.

Karachi.—The Java sugar market is reported to be firm for ready while forward positions are reported to be neglected. On account of the disparity with other imported sugars no business appears to have taken place and unless the disparity is removed either by reducing the limit or by an improvement in market conditions no business is possible.

Business for a quantity of approximately 3,000 tons for British refined is reported to have been done during this week for near and forward positions. It is also reported that some importers are still holding small stocks of French sugar in expectation of obtaining better prices before selling out.

The market for Indian sugars is reported to be very firm, but, on account of the Mill quotations having considerably advanced since the beginning of the season, business is impossible at current quotations.

Stocks are estimated to be 30,000 bags of foreign sugar and 3,000 bags of Indian sugar with an offtake of 8,000 bags per week.

Cawnpore.—The conditions in the local market remained practically the same as reported last week and the demand from consuming centres was of a hand to mouth nature.

The question of the present cane crop is engaging the attention of almost all the local dealers on acount of reports of damage received from certain provinces and insufficient cane supplies available for the Mills. In addition the report of certain factories having already closed down is keeping the speculators in suspense, asa they have not been able to decide whether to hold their commitments for forward positions or liquidate at best available prices.

General.—A certain amount of business has been done during the past week or two by Mills which sold early in the season for forward positions up to July at the then current rates and are now buying back as much as possible to resell at to-day's advanced rates. This action has been forced on some Mills either owing to the poor recovery from the cane or because of the shortage of the crop or both, as a way of meeting their near commitments and cancelling their forward commitments, which they are now afraid they will not be able to meet. It is reported that some 70,000 bags have recently changed hands in this manner, and should this continue for any length of time it should tend to firm up the market considerably as speculators and dealers will have to replenish their holdings at the new rates.

Prices for Java white at importing centres remained weak during the week and closed :—

MISCELLANEOUS

WHEAT

Calcutta, Feb. 21.

Wide fluctuations on the weak side were the features of the Karachi market during the week, the closing rate being 14 annas lower per candy. The decline was due to general liquidation, small buying support and easier tone in the Punjab.

Spot sales totalled not more than 16,000 bags, bought by local mills: there was no demand for shipment. Upcountry averaged 3,500 bags daily. Last week's exports for Bombay are estimated at 15,000 bags.

Arrivals into Karachi since April 1, 1934, total about 33,50,000 bags, as compared with 22,00,000 bags a year ago. Shipments since April 1 last, total 20,08,000 bags, of which about 95,000 bags were despatched to the United Kingdom, and the balance to Indian coastal ports.

Punjab reports widespread rain and good prospects of improvement of the new crop. Prices went down by a couple of annas per maund owing to selling pressure.

RICE

The market showed a marked stability over the week-end owing to demand of about 12 to 15 thousand bags from ports. China and Straits shippers are interested in Meedone qualities, having bought 4,000 tons, European shippers have taken up two million notices.

Below is a statement of total exports from January 1, 1935, to week ending February 9, compared with the corresponding period of 1934.

PROGRESSIVE TOTAL FROM 1ST JANUARY, 1935

	Rice not in the husk	Paddy converted to Rice at 74%	Rice Bran
India ...	204442	18096	108
Ceylon ...	4490	1518	186
Foreign ...	100433	...	26361
Total ...	348965	19614	26655

Grand Total:—395,234 tons.

TOTALS FOR THE CORRESPONDING PERIODS OF 1934

	Rice not in the husk	Paddy converted to Rice at 74%	Rice Bran
India ...	147505	13397	240
Ceylon ...	39339	962	144
Foreign ...	36882	...	37835
Total ...	223726	14359	38219

Grand Total:—276,304 tons.

(Continued from page 583)

It may be presumed that the general opinion in the country is not favourable to a stabilisation agreement and on the top of this has come the crisis in the commodity markets with all its significance to the monetary policy and even the political situation. We publish in this week's issue valuable contributions both from Dr. Paul Einzig and from Mr. Francis Williams on the ramifications of the crisis in pepper, in the monetary and political situation. In the circumstances of the case, it is possible to take the view that the present policy of extremely cheap money has its share of the responsibility of reckless speculation in the commodity markets. Dr. Einzig discusses the relation between cheap money and brought about the crisis has given socialist reformers highly speculative in the markets. While he exonerates the cheap money policy from any considerable blame from having precipitated in speculation, he seems to be of the opinion that something more than the preservation of cheap money rates is essential for revival. We believe it is implicit in this view that cheap money policy unaccompanied by positively active steps for recovery carries with it the germs of dangerous speculation in the commodity and stock markets. At the moment, public opinion in Britain seems to be engrossed in the personal and political aspects of the recent crisis in pepper. The report that extremely important men in the city were connected in some manner with the firms with a handle which, one may be sure, they will turn effectively against the big joint stock banks. The pepper speculation will also figure in the election speeches of the liberal candidates.

What is important to our purpose is the possibility that the relation between cheap money and speculation, whether it is real or supposed, may have the effect of calling a halt to the present monetary and credit policy. It is learnt from the air mail papers that the British banks have, at the instance of the Bank of England, scrutinised the various accounts with a view to make sure that their credit is not abused for speculative purposes. They are reported to have also called in the loans which they have reason to suspect, have been used for speculative purposes. It is not clear whether the authorities have decided to follow a comparatively dear money policy. But it is certain that there will be a tightening of credits and a consequent uncertainty of policy which will not be helpful to the progress of speculation.

In France, the tussle between the Banks and the Government has continued. It is reported that while the French Premier was in London he made efforts to interest British banks in a loan to the French Treasury to the extent of £60 million at a rate of 2½ per cent. The proposal was that the Treasury bonds should be taken up by British banks, only in the event of French banks refusing to assist the Government. While British banks are not averse to such an investment, they have been advised that the Treasury and the Bank of England are opposed to it because of the effect the transaction would have on exchange rates. The transference of £60,000,000 from pounds into francs at the present time would mean a serious decline in the value of the £, and as the £ is in any event likely to decline in value in consequence of our adverse balance of payments the Treasury is not willing to approve the deal.

STATISTICAL INFORMATION

RAILWAY TRAFFIC

LATEST EARNINGS AND WORKING EXPENSES

The total approximate gross earnings of all State-owned railways for the week ending 26th January, 1935 (43rd week), amount to Rs. 193 lakhs, Rs. 12 lakhs MORE than the figures for the preceding week and Rs. 13 lakhs MORE than the actuals for the corresponding week of the previous year and Rs. 19 lakhs MORE than the actuals for the corresponding week of 1932-33.

The total approximate gross earnings from 1st April, 1934, to 26th January, 1935, amount to Rs. 72.30 crores or Rs. 327 lakhs MORE than the actuals for the corresponding period of the previous year and Rs. 480 lakhs MORE than the actuals for the corresponding period of 1932-33.

The following are the up-to-date approximate gross earnings of the State-owned railways from 1st April, 1934, as compared with the actuals of the corresponding period of last year.

A. B. ...	126	148	79	84
B. N. ...	593	639	353	372
B. B. & C. I. ...	841	883	388	393
Burma ...	275	290	167	165
E. B. ...	417	428	241	246
E. I. ...	1,403	1,505	665	671
G. I. P. ...	962	959	508	509
M. & S. M. ...	555	552	247	247
N. W. ...	1,132	1,211	653	667
S. I. ...	423	432	199	200
Tirhoot and Lucknow-Bareilly ...	145	147	44	47
Other Railways	31	36	17	18
Total ...	6,903	7,230	3,561	3,619

Credit adjustments to the extent of Rs. 17 lakhs (approximately) have been made in the above figure of Rs. 72.30 crores, on account of difference between the approximate and audited gross earnings for the month of November, 1934.

A comparison with the figures of the previous week for the principal State-owned Railways shows increases in the approximate gross earnings of all railways except the B. B. & C. I. and E. B. A comparison with the actuals of the corresponding week of 1934 shows Increases in the approximate gross earnings of all the principal State-owned railways except the G. I. P. and M. & S. M.

WAGON LOADINGS

Comparisons of figures of wagon loading on Class I Railways for the week ending 26th January, 1935, and for the cumulative period from 1st April to 26th January, 1935, with the corresponding periods of the previous year are as follows:—

During the week ending 26th January, 1935, there were loaded on the broad gauge 96,431 wagons, being 13,389 MORE than in the corresponding week of the previous year, or an increase of 16.1 per cent. On the metre gauge there were loaded 64,527 wagons, being 13,984 MORE than in the corresponding week of the previous year, or an increase of 27.7 per cent.

For the period from 1st April to 26th January, 1935, there were loaded on the broad gauge 3,362,480 wagons, being 213,635 MORE than in the corresponding period of the previous year, or an increase of 6.77 per cent., and on the metre gauge 2,102,330 wagons, being 111,268 MORE than in the corresponding period of the previous year, or an increase of 5.59 per cent.

INDIA'S GOLD EXPORTS

Gold valued at Rs. 78,04,020 was exported from Bombay during the week ended 9th February. The total amount of gold exported from Bombay since Britain went off the gold standard now stands at Rs. 220,41,40,738.

CASH CERTIFICATES

During the month of January 1935, Rs. 69,92,000 approximately were realized by sale of 5-year Post Office Cash Certificates, as against Rs. 98,27,000 in January 1934 and Rs. 77,17,000 in January 1933.

INDIA'S FOREIGN SEA-BORNE TRADE IN JANUARY, 1935.

The Director-General of Commercial Intelligence and Statistics has issued the following note on India's foreign sea-borne trade during January:—

The total imports of private merchandise in January, amounted to Rs. 12,89 lakhs, and total exports, including re-exports to Rs. 13,63 lakhs. Net exports of private treasure during the month under report were Rs. 4,65 lakhs and total visible balance of trade in merchandise and treasure was Rs. 5,43 lakhs in favour of India. Balance of remittances of funds was minus Rs. 10,16 lakhs.

Investor's Supplement

Vol. XV. No. 8 SATURDAY, FEBRUARY 23, 1935 Price Re. 1

MARKETS HESITANT, BUT NOT DIFFIDENT

This has been a week marked by quiet steadiness and by cautious business deals.

One would have thought that, with the termination of the suspense over the gold clause, the various markets would let themselves go. They did not.

There appeared the semblance of a spurt. But the gush dried up almost before it started.

All that can be claimed for this long-awaited decision is that it partly neutralised the bearish forces. It did not inspire any bullish influence.

The taciturn behaviour of the markets is, however, nothing strange. It is a common experience that while anticipation of any particular event or news excites the operators, actual announcement leaves them cold.

The market is hesitant not because of diffidence, but because of the necessary process of reviewing the past, appreciating the present and gauging the future.

The market is, so to say, taking breath. It is good that it takes breath after the rapid march of earlier weeks.

The healthiest sign to-day is that the markets are making the most of this breathing space. They are consolidating the gains they have won.

That this consolidation is proceeding satisfactorily, is demonstrated by the absence of any "give," worth mention, in any of the markets. Over the past fortnight, prices have not advanced; nor did they give way as was apprehended last mid-week.

Let us take a rapid glance over the several markets.

3½ per cent. Rupee Paper, from the high level Rs. 98½, declined last week to Rs. 96-2 and rapidly recovered to roundabout Rs. 97½. The general view is that Rs. 97-0 is about the rock-bottom level in present conditions.

Tata Steel Ordinaries, from Rs. 155, were forced down to Rs. 141 and, as speedily, pushed up to Rs. 152.

Howrahs, which saw the high water-mark of Rs. 66, sank to Rs. 63-12 and are on the way to recovery, being a few annas over Rs. 64.

Jute is quoting Rs. 32-8 against a high of Rs. 35-8.

EARLIER STRENGTH, LATER WEAKNESS

No Public Support

(Special Cable)

(From Mr. R. Gordon Cummings)

London,
February 21.

With the exception of Tin, all markets close dull on lack of public support.

Giltedged, Railway shares, Industrials, Gold shares were weak after earlier strength.

Undertone, however, remains somewhat steady.

As we had urged frequently in these columns, the Gold Clause decision was a foregone conclusion. It was, fairly generally, known that, whatever it be, its outcome would be innocuous or would be rendered innocuous. Yet it suited the bears to press the gold clause to their service.

The net result of these protracted deliberations is that one of the weapons in the armoury of the bears is no longer serviceable. If it is no longer handy to the bears, it does not follow that it will be of value to the bulls.

So far as the bulls are concerned, they must continue to derive their strength from the intrinsic position in the respective markets. They showed, in the past, great daring and real judgment in planning their confident operations on a proper appraisement of the technical factors. Their daring has earned good rewards; their enterprise has been abundantly justified; their gauging of the future has been proved correct.

What are the intrinsic factors at the present moment? Do they call for further daring? Or will courage in current conditions be mere foolhardiness?

These are the questions which the bulls are now endeavouring to answer. The time and stage of this kind of introspection account for the present pause, for this marking of time.

EFFECT OF GOLD CLAUSE DECISION

Market Trend Upward

(Special Cable)

From an occasional Correspondent

New York,
February 21.

Gold decision favourable to Rails.

Relief to Bond situation.

But unfavourable to Utilities and Holding Companies.

Steels and Machinery Equipment shares appear attractive.

Also Oils and Motors.

Trend upward and general expectation is for more active markets.

Hessian is about steady and more or less unchanged round Rs. 9-8.

Cotton hovers round Rs. 250.

The setback of the last few days is inconsiderable; what is more important, the undertone remains steady. The market is permeated by a quiet, but not weak, feeling.

We may, therefore, emphasise that the gains of January and early February have not been difficult to maintain and retain.

This emphasis derives special significance from the fact that the prices have stood up to a conspiracy of adverse factors. We have, we may say with some measure of confidence, left behind the worst phase of these adverse factors. If the markets could have faced the worst, they are more than equal to what the future may have in store.

From this analysis, we may draw the following conclusions:—

(1) The intrinsic strength of the market is undoubted.

(2) This stage is one of pause, not of listlessness; one of preparation for future rise, not of doubt about past gains.

(3) In the upset of last week, the tired bulls and the weak bulls have been eliminated. The market has thereby been rendered healthier.

Reassurance about present strength is the best guarantee for confidence in the future. While there are gratifying tokens of this reassurance, confidence about the morrow cannot be long in coming.

We continue to remain bullish.

Possibly, the budget of Sir James Grigg—which, by all tokens, must make cheerful reading—will prove the starting point of renewed bullish activity.

Worth-While Investments:

INDIA:

RATIONALISED INDUSTRY

Best by every Test

By "Watch-dog"

I suggested, last week, that Shahabad Cements might witness a rise. I have since had occasion to study, in detail, the 1933 accounts (which are the latest available) of this Company. I was also fortunate in meeting a friend who has just returned from a visit to the works of the cement company at Shahabad. In the light of the closer scrutiny and added knowledge, I must re-emphasise my suggestion and furnish a review of this Company at some length.

At the outset, I may cull the following particulars from a brochure describing the Char Minar Cement produced by this Company:

> "The Shahabad Cement Company Limited was registered on November 5, 1921, with the object of exploiting the Cement-making Raw Materials in H. E. H. The Niziam's Dominions and providing Southern India with good Portland Cement at reasonable rates, thus enabling this part of India to develop its construction works under the same favourable conditions as other parts of the country, hitherto more favourably placed in respect to the supply of cement up to British Standard quality at reasonable prices.
>
> The works are located at Shahabad, Deccan, on the G. I. P. Railway, main line from Madras to Bombay with sidings entering the works to facilitate the receipt of coal and stores and the despatch of cement direct from the warehouses into B. G. Wagons to all stations in India.
>
> The works contain the most modern cement-making and power-producing plant obtainable, giving an annual output of 1,40,000 tons of Portland Cement.
>
> The raw materials are the well-known Shahabad Lime-stone and Black Clay. The deposits are practically inexhaustible and of such composition as to ensure the manufacture of Portland Cement of the finest quality. The Lime-stone is quarried from the Company's own quarries located 3½ miles from the miles from the works site, being brought into the factory on the Company's own light railway. The clay deposits are within a few hundred feet of the factory."

The Company is ideally placed in regard to raw materials as well as consuming markets. Its capital plan is satisfactory; and its reserves are exceptionally strong. Its machinery is most modern and up-to-date; and its management is in the hands of one of the best cement experts in India, Mr. Symons. Its quarry is one of the richest, and is most easy to work, for which a quarry expert has been brought down from England and has introduced many labour-saving and economical devices; and its cement is far-famed and it is claimed that it "now far exceeds in strength the demands of the latest British standard specification for Portland Cement No. 12 of 1931. It hardens so rapidly that at three days the strength of standard Char Minar Cement Sand Mortars exceeds the B.S.S. strength demands at seven days."

The capital of the Company is Rs. 35 lakhs in ordinary shares of Rs. 100 each. The various reserves (including the amount of forfeited shares and premium received in respect of the re-issue of such shares) amount to Rs. 25½ lakhs. Sundry liabilities inclusive of the final dividend payment come to Rs. 7 lakhs.

On the asset side, gross block stands at Rs. 62 lakhs, against which depreciation up-to-date comes to Rs. 19½ lakhs. The net block is, therefore, Rs. 42½ lakhs. On the most conservative valuation, the property of the Company far exceeds the present book value.

Stocks and stores stand at Rs. 5½ lakhs. Book debts are Rs. 5½ lakhs. Cash and investment are Rs. 15½ lakhs, of which Rs. 13 lakhs is in the form of government securities which show an appreciation of over Rs. 1½ lakhs.

Allowing for sundry liabilities, the net liquid assets are, thus, equal to over Rs. 18 lakhs.

It will be observed that the property has been depreciated on an adequate basis, and the reserves built up to a satisfactory level. In fact, the balance sheet does not indicate the full intrinsic strength of the Company. As my friend, who had just inspected the works, told me, "the machinery has been kept in such trim, and the spare parts stacked on the spot are so ample, that you might as well say that there is a double mill lying there. I think that there is no necessity for further depreciation."

The department for packing cement is, I am told, the best in the world. Human element is eliminated as far as possible. At the same time, the same number of workmen has been kept on, but they have been relieved of a lot of manual labour through the utilisation of modern machinery.

The methods of quarrying are the latest; and this section is in the hands of one of the best experts.

The quarry is three and a half miles from the works; and it is expected that, in a short while, the quarry will be connected by an aerial ropeway with the factory.

All the essential raw materials are on the spot, barring gypsum which is now imported from Egypt. Every endeavour is being made to secure domestic supply of gypsum if it is possible at economic rates.

The cement produced is of the highest quality.

"It is hundred per cent. better than the best specification."

Turning to the profit and loss statement, the Company made a profit of Rs. 14 lakhs in 1933. Generous—I should say, over-generous appropriations were made as under:

To depreciation of machinery, buildings, furniture and fittings, etc.	...	Rs.	4,00,000	0	0
Reserve Fund	...	,,	2,50,000	0	0
Reserve for Replacement of Obsolete Machinery	...	,,	2,00,000	0	0

The balance is Rs. 5¼ lakhs, which, added to the carry-forward, comes to Rs. 5.89 lakhs. *Ad interim*

dividend at Rs. 7 per share absorbed Rs. 2.45 lakhs. Final dividend of Rs. 8 per share would mean Rs. 2.8 lakhs. Carry-forward to next account is Rs. 64,000, which is slightly higher than the amount brought in.

It will thus be seen that the amount paid out to shareholders is less than half of the net profits of the year. The allocations made to the various reserves are on too extravagant a scale. The Company could easily have paid another Rs. 8 per share as dividend. In any case, there is hardly any justification for persuing this over-puritannical practice in the next balance sheet.

I would suggest that if the net profit of 1934 is the same as in 1933, the dividend distribution must be at least Rs. 20 per share. There is such a thing as over-doing a good thing. We should be grateful to Tata Sons for their financial and reserve policy in the past. But we should suggest that the time has arrived when this policy should be made less rigorous.

The present price of Shahabad Cement shares is Rs. 832½. A dividend of Rs. 15 on a share valued at Rs. 382½ works out to 3.9 per cent. tax-free. This is a satisfactory yield, especially having in view the possibility that there should be substantial increase in the dividend distribution of future years.

Shahabad Cement Company is a member of the Cement Marketing Board. The latter acts as the sole selling agent of all the member companies and splits up the orders amongst them. The Board also arranges publicity and does all the work in connection with propaganda, representations to Government, etc.

The Indian cement industry was working 60 per cent. capaccity in 1932 ; 68 per cent. in 1933 ; and 75 per cent. in 1934. It is expected to reach hundred per cent. in three years.

This very increase in the output is a factor that conduces to better profits for the Shahabad Cement Company.

Moreover, the experiment of using cement for road-making has been successfully tried in Hyderabad, in which connection the Shahabad Cement Company supplied cement at a special rate. Cement is more adaptable to road-making in India than in England as the changes in climate here are much less marked in most areas.

The use of cement has displaced lime in dam construction ; 250,000 tons of cement were used in the construction of the Mettur Dam over the past five years. Public utility systems of this type are sure to be promoted in the future both by Provincial Governments and by Native States. For these reasons, cement is bound to command a rapidly expanding market in India.

The future of cement companies is, therefore, particularly bright. And amongst Indian cement companies, the Shahabad has, perhaps, the most favourable position from every point of view.

Indian Finance has been urging the issue of a 2½ per cent. short-term loan and the conversion of 3½ per cent. Rupee Paper. The bullish view of giltedge, taken in this column, is based on the feeling that, sooner or later, the Government will take action on the lines of these suggestions. These suggestions do not, evidently, commend themselves to Mr. V. P. Varde (Bombay), who ably argues the case "against" in the following terms :

> "In your discussion on the subject of conversion of 3½ per cent. Paper you do not appear to have answered one point, namely, why and whether it is desirable for the Government to convert a non-terminable liability into a terminable liability. There is no doubt that the holders of 3½ per cent. non-terminable paper will welcome such a proposal and the conversion scheme as outlined by you will be a great success. But why should any Government commit itself to pay off such a large amount within the next fifty years when there is no such obligation? Is the saving in interest charges as per your scheme such an inducement? Of course, Government may take full advantage of the cheap money conditions to pay off the loans due this year or for fresh requirements. But why tackle a non-terminable loan?
>
> Secondly it is not understood why you suggest the Government should issue a cash loan before the inauguration of the Reserve Bank. Why such a hurry? Do you expect that money will be dearer, say, in April or May? If not, what is the idea underlying your proposal that the arrangement be made whereby the purchases of short-term securities will be made by Imperial Bank or some other authority, the same to be handed over to the Reserve Bank after commencement of business. Why should not Government wait and begin its borrowing programme immediately after the Reserve Bank will be in receipt of Rs. 5 crores by way of share capital and of Rs. 6 crores by way of compulsory deposits from member banks. Which will be a more propitious time? Now or in April?"

There are three important admissions which Mr. Varde makes :

(1) Holders of 3½ per cent. Rupee Paper will welcome such a proposal.

(2) The conversion scheme as outlined by *Indian Finance* will be a success.

(3) Cheap money conditions must be availed of in the best advantageous way.

It follows that 3½ per cent. Rupee Paper could be converted into a 3 per cent. loan. If it could be, why should it not be done? Mr. Varde suggests that a liability unlimited as to date must not be converted into a liability with a fixed date. Does Mr. Varde believe that, fifty years hence, the borrowing rate mght be higher than 3½ per cent., and that the conversion of the loan into which 3½ per cent. Rupee Paper may now be converted will prove costlier? Who knows? The borrowing rate may be dearer. It may also be cheaper. For my part, I believe that, with the increasing improvement in the technique of the money markets of the world, governments of countries with good financial position must be able to borrow cheaper than in the imperfectly developed and sorely harassed world of to-day. I believe in the present low borrowing rate not only as a factor of to-day, but as an enduring factor. I look forward to such growth and perfecting in banking and financial practice that my son would be able to get a bare 2½ per cent. from the Government of his day and my grandson no more than 2 per cent. Who knows! A good part of the loan that will mature in fifty years may come to be paid off by the operation of the Debt Redemption Fund.

In any case, we need not bother ourselves unnecessarily over the borrowing powers of our descendents in the next generation or one after the next. Sufficient unto the day is the Rs. ½ crore of saving in our interest charges. And this saving will accrue to our forebears for as many a day as we need now foresee.

The second query of Mr. Varde is as regards the timing of the short-dated loan. Now, or after the issue of Reserve Bank shares? The situation to-day is not the same as when we made this suggestion. The Reserve Bank issue is expected early in March. It follows that the 2½ per cent. loan must be issued only after the Reserve Bank shares are out of the way.

* * *

A correspondent writes to me: "You are incorrigibly bullish on Tata Steel ordinaries. It suits me. I hold quite a number of these shares. But I have been thinking that I should sell out now and take my profit. What do you advise?" By 1937, these shares should be double their present price. This is not only my view, but of friends who understand steel shares and steel prospects in India and in England. Stick to what you have as it will grow more and more.

* * *

"Watching the Watch-dog" has a couple of queries on coal shares. I am making investigation and hope to deal with them in a subsequent issue.

INVESTMENT BREVITIES

Bank of Mysore is a most attractive and most trusty investment amongst shares of this class.

* * *

I like Raza sugars. They are quoting Rs. 167. They must be Rs. 190 before long. The xpected dividend on the working of the current season is Rs. 10 per share of Rs. 100.

* * *

Buland sugars are also quite good. The expert in charge of these two concerns knows his job and will make a good job of the companies which he tends. These shares are at Rs. 3/4 premium: and another two or three rupees may be a near possibility.

* * *

Five per cent. Central India Spinning and Weaving Mills (Bombay) preference shares are quoted Rs. 522½ for a share of Rs. 500. This means an yield of 4¾ per cent.—quite a good yield on one of the soundest preference stocks.

Worth-While Investments:

BRITAIN:

THE DISTILLERS COMPANY.

By R. Gordon Cummings.

The Distillers Company is the predominating influence in the alcohol trade in this country. Incorporated as far back as 1877 to amalgamate a number of distillery businesses, considerable expansion has taken place since 1917. At present no less than 22 distillery companies are controlled, while interests are held in commercial alcohol, chemical and other concerns, apart from associations with four overseas companies. Some time ago a considerable interest was taken in the United Molasses Company, and Solvent Products—manufacturers of industrial alcohol. An agreement was entered into in January 1934, with Petroleum Storage and Finance Company for the manufacture and sale of a petrol-alcohol blend of motor spirit sold as "Cleveland Discol." Another interesting off-shoot is a 60% interest in Gyproc Products, a company manufacturing plaster board and other products. Recent negotiations for the purchase of a share interest in National Distillers Products of America were not carried through.

Originally £1,000,000, the authorised capital has been increased by successive stages to its present amount of £15,000,000, of which £12,890,962 is issued in stock comprising £2,200,000 6% cumulative preference and £10,690,962 ordinary. Debentures outstanding total only £270,000—£150,000 4½% perpetual mortgage and £120,000 6% irredeemable stock. In May 1933, £450,000 4½% debentures were redeemed at 110%.

As the company is largely a holding concern, the published reports do not give a great deal of information. Unlike many holding companies, however, it can safely be assumed that the annual reports are drawn up on a very conservative basis. For many years substantial dividends have been paid on the ordinary capital, and apart from 17½% per annum for 1932 and 1933, 20% has been paid for each of the last 10 years.

The following table, from which will be noticed that earnings have in every instance been well in excess of dividends paid, summarises the results for the past 10 years ended 15 May, 1934:—

Year	Net Profit after Tax	Pref. Div.	Earned Ordinary	To * Reserve
	£	£	%	£
1925 ...	1,763,663	1,661,000	25.8	375,000
1926 ...	2,093,442	1,987,842	24.1	325,000
1927 ...	2,099,294	1,993,694	24.1	325,000
1928 ...	2,264,655	2,159,055	26.8	400,000
1929 ...	2,312,412	2,206,812	26.2	500,000
1930 ...	2,327,706	2,223,756	26.6	504,966
1931 ...	2,272,915	2,170,615	26.2	500,000a
1932 ...	1,758,869	1,661,519	20.7	250,000
1933 ...	1,769,128b	1,670,128	20.8	250,000
1934 ...	2,140,622	2,039,972	25.0	350,000

*Including transfers to superannuation and provident fund: 1925, £75,000; 1926, £25,000; 1927, £25,000; 1930, £4,966; 1934, £100,000, and £100,000 per annum written off share transactions in 1925, 1926 and 1927.

a. Including £250,000 to dividend equalisation reserve.

b. Before charging £45,000 premium on debenture redemption.

As pointed out above, the balance-sheet does not give much information. Assets, however, have been well written down; and if present day values were taken, a substantial surplus would be shown over book figures. The tables given hereunder summarise the assets and liabilities for the last two financial years after making adjustments for the final dividend appropriations:—

Assets	£	£
Land, Plant, etc.	969,217	1,039,862
Subsidiaries—Investments ...	14,576,658	15,028,666
Liquid Assets*	7,220,757	4,658,397
Total ...	22,766,632	20,726,925

*Cash, £4,275,664 (£2,567,246); Investments, £2,055,074 (£1,208,546); debtors and stocks, £890,019 (£882,605).

Liabilities		
Capital	12,890,962	12,890,962
Debentures	270,000	270,000
Creditors, etc.*	3,407,909	2,844,768
Subsidiaries—due (net) ...	1,824,672	648,492
Associates—due (net) ...	356,750	359,282
Reserve	3,700,000	3,450,000
P. & L. Balance	316,339	263,421
Total ...	22,766,632	20,726,925

*Including undisclosed reserves, and £400,000 (£300,000) superannuation and provident fund.

Dealing with the balance-sheet at the last annual meeting, the Chairman pointed out that certain sales took place between subsidiary and associated companies, the profits of which were not taken into the Profit and Loss account but were reserved for in the parent Company's balance-sheet. These profits will eventually find their way to the revenue account. As regards the increase in cash resources, these were partly due to the sale of certain shares in a Canadian distillery company and an increase in the sums owing to subsidiaries.

For some years this combine's sales of consumable whisky have been declining, and for the time being it is not likely that there will be any upward movement in this direction. The enterprising management of Distillers has, however, counteracted this decline by an intensive development of the commercial alcohol business, together with an extension of interests in other directions. A factor, which may assist future profits, is the possibility of an increasing turnover in the United States of America, from which source certain benefits were received during 1933-34. Another factor which would help in raising profits would be a reduction in the present prohibitive Government duty imposed in this country on consumable alcohol.

Whatever the prospects may be of increasing business, there is one thing certain that there is little likelihood of the profits of Distillers showing any material setback, unless, of course, industrial conditions in Great Britain decline. Accordingly, the £1 ordinary units of stock are a sound investment offering the relatively high yield of 4¼% at 94s. In the year to 15 May 1934 profits were sufficient to cover the preference dividend almost 20 times, so that there is hardly any likelihood of these shares never receiving their full dividend. In view of the low yield of under 3¾%, however, the £1 units do not offer much scope for appreciation, although holders would be ill advised to sell. In view of the gilt-edged nature of the stocks, the debentures are practically impossible to buy.

THE WEEK IN THE EXCHANGES

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, February 22, 1935.

During the week under review, the interest in all sections of the share market has been at a low ebb. It is unfortunate that while the local market was keeping a steady feeling inspite of the prevailing general inactivity, a combination of outside circumstances has dislocated it and created a subdued atmosphere.

Government Securities, after its recovery from the recent slump, were rather ruling fairly steady until Thursday, when this morning was again witnessed an easier market.

Jute shares have been a quiet market throughout week, with a feeling of uncertainty. Coals were easier with a little turnover, while Cottons and Teas were neglected. Miscellaneous issues, disclosed no special feature.

Government Securities.—The price of 3½ per cent. Paper has been maintaining a steady level, until Thursday, the price fluctuating between Rs. 97-10 and Rs. 97-6, but there has been sudden drop this morning and the quotation at the time of writing is no better than Rs. 96-13. Business was reported in 3½ per cent. 1947-50 at Rs. 102 ; 4% 1960-70 at 109-11 ; 5% 1939-44 at Rs. 108-4 and 5 per cent. U. P. Bonds 1944 at Rs. 111-12. The close is somewhat easier. The present undertone of the market is on the lower side, due to tightness in the money market.

Debentures.—Apart from one or two deals in Port Trust issues,—and a solitary deal in 7 per cent. (1938-43) Shree Radha Krishna Sugar Mills at Rs. 102-8, there has been no business in this section.

Preference Shares.—There has been less doing here, buyers appear to be in a waiting mood, as their funds could be employed elsewhere at a good rate of interest. Prices remain unchanged at last quoted rates. Business was reported in 7 per cent. Kinnison Jutes at Rs. 153 ; 7% Bally at Rs. 146 ; 7% Anglo India at Rs. 151 and Agarpara Preferences at Rs. 132-8 ; British India Corporation Preferences are steady at Rs. 157 C. D. with more buyers at this rate. Indo Burma Petroleum Preferences changed hands at Rs. 118.

Banks and Railways.—Imperial Bank shares showed a little improvement. Fully paids are now quoted at Rs. 1,620 and Contributories at Rs. 405. Central Banks were dealt round Rs. 41-8 and Bengal Central Bank at Rs. 9-8.

Railway issues were in fair demand at steady rates, and dealings were reported in Mayurbunj at Rs. 61-8, Mymensingh Bhairab Bazar guaranteed and rebate at Rs. 92 and Rs. 94 respectively. Sara Serajgunge were placed at Rs. 92-8, Bankura Damodar, and Katakhal Lalabazar at the same price.

Cottons.—This section remained neglected and prices are generally quoted slightly lower. Kesorams were done at Rs. 4-3, Bengal Nagpur at Rs. 18-8 and New Victoria (Pref.) at Rs. 4-8. Muir Mills are, however steady at Rs. 360 ex-dividend.

Coals.—This section has also ruled easier, with a poor turnover. Among the recently favourite stocks, New Manbhooms, Equitables, for want of fresh support, have declined to Rs. 66-8 and Rs. 36-8, after touching Rs. 65 and Rs. 35-12, the lowest, respectively. Bengals may be quoted at Rs. 283, Burrakur at Rs. 13-14, New Beerbhums at Rs. 14-12. Rewa at Rs. 13-2 and West Jamuria at Rs. 12-2. Other scrips are more or less unchanged.

Jute Shares.—In sympathy with the falling of prices in the commodity markets, Jute shares too, after making a steady show, have given way. Prices have registered a general decline, and at the time of writing, a feeling of uncertainty is prevailing in the market. The tightness of money in the Bazar, poor demand of Hessians and other manufactured goods from overseas are causing some anxiety to the bulls of the market and a few weak holders have already released their holdings. The tone of the share market itself is however not at all disappointing and unless something extra-ordinary happens to cause a serious reduction in the earning capacity of the mills, we should see a firm market again, before long.

The following are the quotations of to-day: Howrah Rs. 63-13 ; Kamarhatty Rs. 635 ; Adamjee Rs. 393 ; National Rs. 27-12 ; Nuddea Rs. 72 ; Presidency Rs. 6-4 ; and Waverly Rs. 3-6.

In the commodity markets, prices were generally falling away during the last week and Raw jute has been showing a dull and dropping tendency, as the March settlement is coming near and a section of speculators have been creating a bearish idea by thinking that the Government will not be able to restrict jute sowing according to the public belief. Consequently, one or two "bulls" are reported to have liquidated their holdings to day. A report from the Government about the success of its operation is however awaited with great interest.

In the Hessian market, some of the bazar operators getting tired and nervous, wanted to clear off some of their ready holdings, but the demand from overseas continued to be poor and proved insufficient to keep the market at steady level.

Teas.—Teas remain dull and featureless. Bishunaths changed hands at Rs. 27, Hatikira at Rs. 26 and Hasimara at Rs. 39-4.

Sugars.—These were in better demand, Cawnpore improved to Rs. 37-4, Rohtas has a strong enquiry upto Rs. 12-4, Purtabpores were done at Rs. 15, and Murree Brewery at Rs. 204-8. Balarampore continues steady at Rs. 20-8 anticipating a dividend of Rs. 1-8 for the year. These shares are likely to advance further two points. Basti and Punjabs are quoted round Rs. 245 and Rs. 314 respectively.

Engineering.—This section showed no change. Indian Iron and Steels were dealt round Rs. 7-10 and Bengal Iron at Rs. 4-7 and Indian Standard Wagon at Rs. 67-8. A deal was reported in Tata Iron and Steel (ordy). at Rs. 155.

Electrics.—The following dealings took place in this section, with no change in rates. Bengal Telephone quoted Rs. 18-12, Cuttack Electrics Rs. 8-14, Dacca Rs. 19, Mirzapore Rs. 7-12, Upper Ganges Rs. 12-6, and U. P. Electrics Rs. 162.

Miscellaneous.—Burma Corporation are easier at Rs. 5-14 cumdividend. Frank Ross quoted Rs. 4 and Midnapore Zemindary Rs. 73-8. Bengal Papers are a shade easier at Rs. 105, while Indian Paper have improved further to Rs. 196.

Insurance.—Triton Insurances were done at Rs. 230. We recommend Triton Insurance shares a good buy for looking way as a long investment.

MADRAS STOCK EXCHANGE

(*By Wire*)

(From Our Correspondent)

Madras, February 22.

The securities market was dull and flat during the week under review. Paper fluctuated only about 8 annas closing steady. There was not much business passing in the other two long-dated securities, whilst the enquiry for short and medium dated loans was poor with the exception of 4 per cent. 1943 loan in which a good business passed at Rs. 106. Money has remained tight.

Mysore loans with the exception of 5½ per cent. and 5 per cent. were offered freely without interesting buyers. There was no transactions in Municipal and Port Trust debentures.

Fixed Interest Securities.—Amongst Joint Stock company Debentures Cochin Malabars were again done at Rs. 4 premium and Singarenis were done at Rs. 6 premium. The preference share market was steady with business done in McDowell preference at Rs. 64 ; Deccan sugars at Rs. 135 and Spencer's "B" preferences at Rs. 12-8, as also Vasanta Mills preference at Rs. 106 and Tata Steel Preferences at Rs. 171.

Banks.—This section was firm with business done in Imperials up to Rs. 1,618 for the fully paids and Rs. 402 for the partly paids. Central Banks were frequently dealt in around Rs. 42 cum-dividend whilst Indo-Commercial Banks were done at Rs. 115 and Bank of India's at Rs. 121-8. A strong enquiry was noticeable for Indian Banks at quoted levels.

Public Utilities.—Public utilities were prominent. Madras Telephones were absorbed at Rs. 21-4 and Rangoons at Rs. 13¾. Electric Supply issues were firm with transaction in Trichy Srirangams at Rs. 202 ; West Coast Electrics at 8 annas premium and Vellores at Rs. 13¼. There were enquiries for other issues with no transactions reported in the absence of sellers.

Mills.—This section was active with business done in Buckinghams up to Rs. 214 ; Coinbatores at Rs. 50 ; Kaleeswaras at Rs. 260 cum-dividend and Cambodias at Rs. 13-8- as also several deals in Premier Hosiery at par. Amongst outside market shares, Gokaks were a feature with business done upto Rs. 232-8 ; Premier Hosiery has declared for the first time an *ad-interim* dividend for the half year ended 315st December, 1934. The Directors have allowed that hereafter dividends will be paid twice a year. The company is reported to be working satisfactorily. The shares have scope for Capital appreciation. Vasanta ordinaries jumped further and were done at Rs. 107 Ex.-div. with buyers over. The company has now increased the number of spindles to 15,500 without any extra capital expenditure.

Miscellaneous.—This section was devoid of interest except for the usual popular scrips such as Burma Corporations, Tata Steel ordinaries and Deferreds both of which showed improvement, and United Breweries.

BOMBAY STOCK EXCHANGE

(*By wire*)

(From Our Correspondent)

Bombay, Friday Evening,
February 21, 1935.

Money Market.—Money was steady in the beginning of the week with Call money quoting at 3 per cent. and eased at close to 1½ per cent., on account of Treasury Bill maturities over the sales.

Exchange.—Exchange was steady with Banks selling T.T. at 1s. 6 9/64d. for near deliveries ; 1s. 6 1/8d. for mid-March ; 1s. 6 3/32d. for early April ; 1s. 6 1/16d. for early May ; 1s. 6 1/32d. for June and 1s. 6d. July-December. Banks are buying three months bills at 1s. 6 7/32d.

Securities Market.—The Rupee Security Market was steady throughout the week though closed lower on weak sterling advices. 3½ per cent. Paper declined from Rs. 97-10 to 96-13; 1941 Rs. 100-14 ; 47-50 Rs. 101-14 ; 1943 Rs. 105-15 ; 60-70 Rs. 109-11 ; 55-60 Rs. 117 ; 1945 Rs. 101 ; 39-44 Rs. 108-1 ; 40-43 Rs. 109-4 ; 38-40 Rs. 108-8 ; Bombay Development Rs. 102.

Shares.—Sensational activity prevailed in Steels with other sections practically neglected.

Textiles.—This section was practically neglected and closing quotations were slightly easier compared to prices during the week. Price of cloth has not improved and it is reported that many mills are having huge stocks of cloth. Bombay Dyeings closed at Rs. 945 ; Central India Rs. 377-8 ; Century Rs. 291-4 ; Colaba Rs. 150 ; Gokak Rs. 215 ; Kohinoor Rs. 230 ; New Great Rs. 200 ; Swadeshi Rs. 241-4.

Hydro Electrics.—Tata Powers moved between Rs. 1,660 and closed at Rs. 1,657-8. We do not advocate fresh purchases at current levels. Andhras were steady with minor fluctuations and closed at Rs. 1,755. Hydros closed at Rs. 177-8.

Iron & Steel.—The week witnessed amazing fluctuations in Steels with the tendency of the market a little bearish in the beginning of the week with sudden change on second day on account of increased bull activity and short covering. Ordinaries opening at Rs. 140 had a rapid rise to Rs. 160 though closed at Rs. 157. Deferreds which were Rs. 600 rose to Rs. 730 and closed at Rs. 220. The market sentiment seems bullish but we would advise profit taking with an idea of picking especially Ordinaries on reaction. Second Preferences were steady at Rs. 173.

Cements.—This section was practically neglected. Bundis closed at Rs. 40 ; Gwalior at Rs. 123-12 ; Indian at Rs. 417-8 ; Katni Deferred Rs. 1,400 ; Ordinary Rs. 387-8 ; Okha Rs. 213-2 ; Punjab Rs. 26-12 ; Shahabad Rs. 382-8 ; United Rs. 82.

Miscellaneous.—Scindhias, on rumours of a debenture issue by the Company were done as low as Rs. 10 though closed at Rs. 11-10. There was good activity in Belapurs with prices touching Rs. 310 but closed steady at Rs. 304-8. Bombay Burmahs were steady at Rs. 427-8, with New shares at Rs. 130. Tata Constructions were lower at Rs. 82.

Banks & Insurance.—There was good enquiry for Imperial Banks ; fully paid after being done at Rs. 1,635 closed Rs. 1,627-8. Partly paids closed better at Rs. 408-12. Barodas were steady at Rs. 105 ; Centrals at Rs. 41-8 ; Bank of India at Rs. 125-8 and Unions at Rs. 6. Oriental Assurance: closed at Rs. 4,750 ; New Indias steady at Rs. 48-12.

LONDON STOCK EXCHANGE

Most sections on the Stock Exchange were devoid of interest and on the whole the week under review has been featureless. Giltedge was dull but steady. There was small turnover. Among other sections Minings were attractive for a time. Teas and Rubbers were mostly unchanged. Oils were irregular. Industrials were generally inactive but most issues were steady.

NEW YORK STOCK EXCHANGE

Wall Street was quiet and stagnant on acount of the gold clause cases though at the close, on decision being construed favourably there was good enquiry with prices slightly improving. At the close, the market tone was slightly easy.

Virtually Government have scored a victory and President Roosevelt can proceed with his Recovery programme undisturbed.

American Telephone and Telegraph declared a quarterly dividend of 2¼ dollars and Ohio 70 cents ; National Dairy 30 ; Brokers' loan were down to 23 million and Carloadings down to 18275.

Quotations:

STOCK MARKETS OVER SHADOWED BY PEPPER & GOLD CLAUSE

INDIGESTION IN GILTEDGE

TATA POWER'S NEW ISSUE

By R. GORDON CUMMINGS.

By Air Mail

Special for "INDIAN FINANCE"

London, 5 February, 1935.

Pepper and the American "Gold Clause" have thrown a shadow over stock markets during the past week. Developments with regard to pepper speculations, culminating on Thursday in a compulsory winding up order being presented against James & Shakspeare Limited—a company in which the public only took an interest less than six months ago—have had an unsettling affect throughout the City. Although the Stock Exchange is not directly affected by these speculations, there are fears that heavy sales of investments may be necessary by outside interests to meet other commitments. As usual in the case of a crash, whether large or small, rumours, many ridiculous and fantastic, have been circulating. Out of these rumours one thing appears reasonably certain ; that the banks will make a determined effort, by reducing loans, to cut down drastically speculative activity in shares.

Dealing with individual markets, almost every section has shown a dull tendency under the leadership of gilt-edged stocks, which are one to three points lower on the general uncertainty and for other reasons given below. Indian stocks have fallen in sympathy. There has been a further fall in Canadian Municipal loans on fears that full interest payments may not be made.

Despite the announcement that the agents in this country have sufficient funds in hand to make a first payment of 50 per cent. on account of the interest due 1 January last on the *State of San Paulo Coffe Institute* 7½ per cent. sterling bonds, there has not been any startling recovery in Brazilian stocks.

The bright spots have been the Home and Argentine Railway sections, a long list of rises being witnessed. As regards industrials, shares of companies connected with television have received a great deal of speculative support, but in practically every instance highest prices have not been maintained. Newspaper shares remain firm, while *London Brick* are higher on the increased dividend. *Boots Pure Drug* 5s. shares have appreciated to 50s. Iron, coal and steel shares have shown steady but small declines.

After early weakness rubber shares are recovering.

Although Australian gold shares have recovered to a slight extent, Kaffirs are lower on balance, many operators having decided to reduce their commitments until the effects of the "Gold Clause" decision are apparent. Following a promising start West Africans are again dull. In sympathy with the uncertainty in other commodities, tin and copper shares have been marked down. Oils generally remain steady, but there have been sharp fluctuations in *Mexican* and *Canadian Eagles*.

At the time of writing there is a general feeling of nervousness and uncertainty. Recovery cannot be expected until confidence returns, both in home and foreign political affairs, and in financial stability.

Gilt-edged Indigestion.

Underwriters of Government and Municipal loans are having a poor time, two further blows having been given to them last week when they were left with 77 per cent. on the £1,200,000 *Hull Corporation* 2¾ per cent. 1960/70 stock, and 33 per cent. of the £500,000 2¾ per cent. 1955/65stock issued by *Ilford Corporation*. Including these two stocks, underwriters have had to take up large amounts in the case of five recent issues, so it is not surprising that the gilt-edged market is showing signs of indigestion. Something will have to be done or otherwise poor terms will be forced upon borrowers. I understand that interested parties have agreed to call a halt in the issue of Municipal loans until the existing scrip taken up by underwriters is absorbed by the public.

As the following table shows a substantial amount of stock has been overhanging the market :—

Stock	Total Issue	Underwriters	Price Issue	Price Present
	£	£		
Australia 3¼% ...	22,384,000	8,730,000	100	99
London C.C. 2¾%	10,000,000	5,459,000	100	98
Blackburn 2¾% ...	1,000,000	970,000	98⅞	97
Hull 2¾% ...	1,200,000	924,000	98½	96
Ilford 2¾% ...	500,000	165,000	99	98

Out of a total of £35,084,000, no less than £16,248,000, or over 46 per cent., has therefore been left with underwriters, a very substantial amount for the market to absorb, even in these days of plentiful money, without having to be troubled with further new issues.

Sooner or later I fully expect that matters will right themselves and I shall not be surprised to see some of the above stocks standing nearer par in the near future. Of there five issues, *Australia* 3¼ per cent., redeemable 1956/61, is the most promising purchase.

A much more favourable reception was given to the conversion offer made to holders of £9,800,000 3½ per cent. debentures of the *Mersey Docks and Harbour Board* into an equivalent amount of 3¼ per cent. stock 1970/80, at par, conversions amounting to approximately £6,000,000 and cash applications to almost £8,000,000. Although not a trustee investment, this stock is almost the equivalent thereof ; and I can recommend it as a promising proposition at anything around par. The opening price was 99½.

Tata Power Issue.

Great interest has been aroused over the conversion offer of *Tata Power Company,* which is issuing £765,600 2 per cent., a mortgage debenture stock, guaranteed by the British Government under the Trade Facilities Act, at 98 per cent. Redemption will take place by means of a cumulative sinking fund between 1935 and 1948 ; with the company reserving the right to redeem part or whole of any outstanding stock at par on 15 November, 1944 or after. Holders of the existing 4½ per cent. guaranteed debentures can convert into the new stock with a cash payment of £2 for each £100 of stock.

This issue is interesting in two respects—on account of the record low rate of interest and the fact that it has been underwritten at the cheap rate of ¾ per cent. In view of the Government guarantee, the stock is gilt-edged, but on the terms of the offer it is likely to make more appeal to financial institutions than to the ordinary investor. Interest is payable on 15 May and 15 November, with a first payment of £1 per cent. on 15 November next ; the flat yield is £2 0s. 9d. per cent. with a minimum redemption yield of roughly £2 2s. per cent.

Austrian Conversion Bonds.

Outside the gilt-edged market, I would draw attention to two reasonably secured stocks giving good yields, the first being *Austria 4½ per cent. Conversion* bonds, recently issued at 98½, and now obtainable at 99, to yield over 4½ per cent. These bonds are guaran-

teed in fixed proportions by Great Britain, France, Italy and certain other countries, in addition to being secured on the gross receipts of the Austrian Customs and Tobacco Monopoly. Revenue from the latter source has been sufficient in recent years to cover the service of this loan several times over. In view of the improvement in the political outlook of Europe these bonds should become increasingly popular.

Compared with many similar industrial prior charges *Forestal Land, Timber and Railways* 4½ per cent. ten year registered notes offer a good yield at current price of 101. This company, which owns extensive forests and lands in Argentine and manufactures tanning extracts, is, I learn, doing much better. As the last balance-sheet showed assets exceeding £10,000,000, the £1,000,000 of notes in issue are well covered as to capital. On the profits for 1933 the annual service was covered almost three times. There is no risk of loss on redemption, as this takes place at 101 per cent. 1 June 1944, or at 102 after 1 June 1939.

Railway Stocks.

As noted above, Home Railway stocks recovered part of their previous losses on the announcement that the Southern Railway had won its appeal against certain Rating Assessments, which are reduced to £1,077,131, compared with the existing assessment of £1,840,000. Unless this decision is reversed by the House of Lords, a substantial annual saving in rates will accure to the benefit of stockholders. As against the comparatively poor traffic returns of recent weeks, this decision has given investors fresh heart.

The first of the dividend announcements has been made. The *Southern Railway* Company is paying 4% for 1934 on the 5% preferred ordinary stock, as against only 3% in 1933. Judging by a sharp rise in quotation the market is pleased with this decision.

Comparison of present prices with the highest levels of 1934—given in brackets— shows that *London, Midland* and *Scottish* ordinary, now 20 (30½), *Southern* deferred, now 23½ (32½), and *London & North Eastern* second preference, now 28(46¾) offer scope for appreciation over the next few months. Prospects are just as bright now as they were a year ago, when all these stocks were steadily rising in price.

I am pleased to see that Argentine railway stocks are rising on belated recognition that the trade and exchange position of Argentina is steadily improving. After making wide quotations for some time Jobbers have narrowed their prices considerably, thus making dealing much easier. The ordinary stocks of *Buenos Ayres Great Southern,* now 27, and *Buenos Ayres Western,* now 23, together with *Central Argentine* 4½% preference, are promising speculations.

London Brick Record Profits.

In accordance with my previous predictions it is evident that *London Brick Company and Forders* has benefited to the full from the expansion in building activity during the past year. For the twelve months ended 31 December 1934 a final dividend of 7½% is being paid, making, with the three interims of 5% already distributed, a total of 22½% for the year, against 20% in 1933, 15% in 1932 and 20% per annum for the three previous years.

After again placing £175,000, as in the previous four years, to depreciation reserve, and meeting the preference and ordinary dividends, £26,000—the largest increase since 1927—is added to the carry forward, making this £250,000. As preference dividends require £32,000 and 22½% on the ordinary takes £350,000, profits for 1934 are approximately £408,000—a fresh high record. This compares with profits of £312,612 in 1933 and a previous highest of £313,143 earned in 1930. The first 5% interim for 1934 was paid on £1,400,000 issued ordinary capital, but as the latter was increased in July last by £200,000 to its present total of £1,600,000, the second and third interims were paid on the latter amount, as will be the final of 7½%.

On announcement of the final dividend the £1 ordinary units spurted sharply to 87s., but later reacted to 85s. 6d., at which they yield well over 5¼% —a return which is highly satisfactory when compared with the meagre yields offering on many leading industrials. I repeat my previous advice that London Brick are still the best and safest purchase amongst brick shares.

Incidently, I hear rumours that an offer may be made in the near future by a leading concern in the industry for the 5s. deferred shares of *Sussex Brick Company,* one of the most successful of the smaller units in the brick trade. Profits for the year ended 30 September 1934 showed a substantial increase over those for 1933, and the dividend was increased from 7½% to 18%. At 12s. 6d. the shares have speculative possibilities, although my warning of last week regarding the smaller brick companies should be borne in mind.

Imperial Tobacco Profits.

The full report of *Imperial Tobacco Company (of Great Britain and Ireland)* confirms my previous estimate of the profits for the year to 31 October last. The actual figure, after charging taxation and all expenses, is £9,589,009, which goes against a comparable figure of £7,593,561 in 1933, thus showing an increase during the past year of £1,995,448. In 1933 profits, however, were increased by the transfer of £521,047 from special advertising reserve, thus making a total of £8,114,608. Nothing has been so transferred in 1934. After meeting preference dividends and distributing a total of 22½% tax free, on the £37,492,625 ordinary capital, the balance carried forward is increased by £300,959 to £1,139,552.

Compared with the previous year the balance-sheet shows some remarkable changes, stocks of tobacco, *etc.,* having increased by £5,700,000 to £29,257,327. This increase, together with a rise of £1,210,000 in debtors, is reflected in reductions in investments and cash, and an increase of over £2,000,000 in creditors. Total assets are higher on the year by £3,121,000 at £79,538,255. The £1 ordinary units are practically unchanged at 139s. ex-dividend.

The Week's News.

Another batches of satisfactory announcements has been published by a number of other companies during the week. Compared however, with evidences of improved trade during 1934 in many industries results of *Lister & Company,* the silk spinners, textile manufacturers, *etc.,* for the year to 30 November last are somewhat disappointing, although mainly due to exceptional circumstances. After providing over £75,000 for the cost of reductions in silk duties and drawbacks, and writing £63,000 off old plant, etc., a loss of £182,884 is reported, against a profit of £949 in 1932-33. A credit balance of £3,652 brought in is converted into a debit of £22,032, after transferring £157,201 from reserves. No dividend has been paid on the 6% preference shares since 1 December 1932, while the last ordinary payment was 5% for 1928-29. The £1 ordinary shares have fallen to 6s. 9d.

Following the increased dividend of *Bolsover Colliery,* I am pleased to note that recovery in the Coal trade appears to be fairly general, the *Blackwell Colliery Company,* a Yorkshire undertaking, announcing a final payment of 5%, making 7% for 1934, against 6% for 1933. A prominent Scottish company —*Fife Coal*—is also increasing the dividend on the £1,224,393 ordinary capital from 5% tax free in 1933 to 7½% tax free for 1934.

Reflecting increased spending power on the part of the British public, the preliminary statement of *Dickins & Jones,* the well-known West End stores company, shows profits of £105,906 for the year ended 31 January, against £101,309 in 1933-34. After providing for debenture interest, preference dividend, and £10,000 (nil) for income tax, the ordinary dividend is made up to 7½% for the third successive year, and the carry forward increased by £1,277 to £50,258.

The company is controlled by Harrods, Limited, which concern increased its profits by £17,298 to £708,900 for the year to 31 January. The ordinary dividend is varied by 1%, and after again adding £20,000 to special reserve the carry forward is increased by £19,500.

On the other hand, Lewis's, the provincial drapers etc., have evidently not done so well as the London Stores Companies, profits for the past year being only £727,967, against £771,458 for the year to 31 January, 1934.

Selfridge & Co. announce gross profits of £375,139 for the year to 31 January 1935, as against a comparable figure of £347,327 for 1934. The ordinary dividend is increased from 3% to 5%, and £5,000 added to the carry forward. William Whitely, which is controlled by Selfridges, report profits of £156,580, against £151,924 in 1934.

The industrial new issue market has had a busy week, a number of companies making their bow to the public for the first time, either through "introduction" of the shares to the Stock Exchange, or by offers for sale, or prospectus. Four of these concerns—Carbo Plaster, Hunziker (Great Britain), Johnson and Slater, and Taylor Woodrow Estates—are connected with the building industry in one form or another. To provide funds for paying off the outstanding £150,000 7% debentures and to furnish additional working capital for business expansions, *Humber Limited,* motor manufacturers, is issuing 600,000 5% £1 preference shares at 20s. 6d. each. In view of the strong backing behind the company—the Prudential Assurance Company is indirectly interested—these preference shares are a well secured investment offering a yield of 4⅞% on the issue price. They should prove popular. *Booth's Distilleries* is to make an issue of preference shares to provide funds for the acquisition of another business.

Electric Supply Combine

Important developments connected with the supply of electricity in Central and West London are imminent following the registration of London Associated Electricity Undertakings. At present this company has a nominal capital of only £300, but the objects are to acquire not less than 90% of the issued share capital of six electric supply companies operating in London. These companies are the Brompton and Kensington, Chelsea, Kensington and Knightsbridge, St. James and Pall Mall, Westminster, and Charing Cross undertakings, which have a total issued capital of £6,892,194, apart from over £2,000,000 debenture stocks outstanding. It would thus appear that further unification is to take place.

All these companies operate under the London Electricity Acts of 1925, which provide that the annual standard dividends on the ordinary shares should be at the rate of 7% per annum, subject to the possibility of increases under a consumers' benefit clause, namely, one-sixth of the benefit given to consumers by the reduction of charges below the standard price. Under these provisions, therefore, there cannot be any increase in ordinary dividends until reductions can be made in the rates charged for electricity. At present the shares of the above six companies are standing around 37s. to 39s., to yield about 3¾%. For the time being they must be classed as fixed interest securities, and until there is some prospect of excess dividends, I cannot recommend a purchase.

Shipbuilding Improvement.

Statistics, published by Lloyds' Register of Shipping, of vessels launched during 1934 show that the shipbuilding industry of the world, and Great Britain in particular, is at last making marked recovery.

In the light of Lloyds statistics the shares of shipbuilding companies are worth consideration by the lock-up investor. It must be remembered, however, that competition is still very keen, and that a tremendous amount of lee way has still to be made up. Amongst prior charge issues, *Camell Laird* 5½% third mortgage debenture stock has interesting possibilities at 78. In 1932 the capital of this company was drastically reduced, it being then provided that interest on the first and third debentures should be non-cumulative until December 31, 1934, and paid only out of profits. For the year to December 31, 1933, both stocks received 2½% interest, but I fully expect this rate to be increased, if not doubled, in respect of 1934, especially as liquid resources are strong. A further valuable point in favour of the third debentures is the option of converting into 5s. ordinary shares at par. This option may be valuable in future years.

In the case of equity shares a greater risk must naturally be taken, but I consider that *John Brown* 6s. ordinary at 4s. 9d., and *Swan, Hunter and Wigham Richardson* £1 ordinary at 16s. amongst non-dividend payers have speculative possibilities. Apart from a loss of £1,193 for the year to June 30, 1933, *R. and W. Hawthorn, Leslie and Company* has made profits in each of the last six years, those for 1933-34 equalling 4½% on the issued ordinary capital in 10s. shares. Although the yield is small at current price of 15s. on the basis of the last six years, those for 1933-34 equalling 4½% on the issued ordinary capital in 10s. shares. Although the yield is small at current price of 15s. on the basis of the last dividend of 4½% the shares are probably the best purchase in this market. Taking the figures of the last balance-sheet the break-up value is in excess of 20s. per share. *Yarrow and Company* is another prosperous concern, profits for the year to June 30, 1934 representing 29% on the £150,000 ordinary capital, compared with 16% in 1933, 14.7% in 1932, and 12.7% in 1931. At 40s. the £1 ordinary yield 5% on last year's 10% dividend, but as the shares are tightly held purchases are often a matter of negotiation.

Tin Shares.

Despite a temporary setback in most tin shares, I am still very optimistic regarding the future of the industry. In fact, the recent falling away in prices presents an opportunity, which should not be missed of purchasing promising shares at bargain prices.

Several encouraging statements have been published during the week, the most satisfactory being the report of *British Tin Investment Corporation* for the year to December 31 last. This Company, which holds shares and debentures in the best tin mining concerns, doubled its profits in 1934, the net figure of £94,847 comparing with £46,790 in 1933. Three interim dividends totalling 5½% have been paid, while a final of 2% is to be distributed, making 7½% for the year, against 4%. The final dividend is being paid on an issued capital of £1,522,286, as increased by £341,316 in December through the exercise of certain options.

During the year investments in tin companies, figuring at £1,428,258, were consolidated and now largely represent holdings of permanent importance. The market value of quoted securities is in excess of cost price. The 10s. shares close 9d. easier at 13s.

Another encouraging report is that of *Petaling Tin,* which owns properties in the Federated Malay States. After providing for depreciation, profits for the year to October 31 last are £108,646, compared with £70,582 in 1933. After placing £16,333 (£11,667) to reserve, and paying 40% (25%) dividend, the carry forward is reduced by £1,020 to £30,209. The one dollar shares can be added to my list of recommendations. The current price is 15s.

The quarterly operating results of various tin producing companies under the management of Anglo-Oriental Mining Corporation are now published for the three months ended December 31, 1934. The following table gives the most important of these results, together with the estimated mine profits for the quarter ended September 30, 1934. The figures, however, should not be taken as a definite indication of a full 12 months working, as various factors such as differences in the grade of ore mined, a slowing down in certain cases owing to over production under the quota scheme, and a reduction in the quota allowances for the Decem-

ber quarter, make comparison difficult. Of the companies mentioned Ampat, Kuala Kampar, Larut, Rawang, Southern Kinta and Toyo Tin increased their output, whereas the other companies produced a lower quantity of concentrates.

Company	Issued Capital £	Quarterly Profits September £	December £
Ampat ...	220,000	6,465	6,429
Associated of Nigeria ...	1,000,000	45,162	36,645
Kamunting ...	668,750	50,781	43,381
Kramat ...	165,000	28,443	5,103
Kuala Kampar ...	585,000	2,717	13,959
Larut ...	600,000	3,588	9,880
London Nigerian ...	950,000	38,356	29,536
Rawang Concessions ...	200,000	9,905	10,350
Southern Kinta ...	870,269	41,092	49,627
Southern Siamese ...	165,000	5,366	1,964
Tavoy ...	429,883	16,547	11,792
Toyo ...	210,633	9,396	15,228

Future of Gold Shares.

As I predicted last week, Australian gold shares, under the leadership of *Commonwealth Mining and Finance*, have firmed up. The Directors have issued a re-assuring statement regarding the Yellowdine gold area. Despite the fact that recent results at depth were disappointing, it is anticipated that further bore holes will give more conclusive results. The shares are now around 10s. 3d.

Ashanti Gold Fields have been well supported up to 52s. on the excellent development cable for January. Recent developments are certainly very encouraging, assays showing practically three ounces of gold to the ton over 12 ft. width in one instance.

Amongst base metal shares *Burma Corporation* were not affected by maintainance of the interim dividend at 2½ annas per share.

British South Africa (Chartered), which holds large interests in the leading Rhodesian Copper companies, is paying a dividend of 1s. on the 15s. shares for the year ended September 30 last. In respect of 1932 there was no distribution, but for 1933 two payments of 6d. each were made. On this announcement the shares have firmed up slightly to 21s. 9d., at which price they are worth attention.

Market Pointers.

The *Prudential Assurance Company* is maintaining the dividend on the A shares at approximately 18s. 5d. tax free per share, while the distribution on the B shares is again 1s. 6d. tax free per share. On these announcements the A shares fell to 36¼ and the B shares to £5. Recovery is likely at an early date. In the case of the *Pearl Assurance Company*, the dividend is maintained at 50% tax free on the £1 shares.

Towards the end of this month the report of *Enfield Cable Works* will be published. For 1933, 20% was paid on the £1 shares, against 25% for a number of years previously. The market is expecting a sharp recovery in profits together with an increased dividend. Should the payment be restored to 25% the shares will yield almost 5% at their present price of 103s.

At one time during the week *Mexican Eagle* ordinary shares fell sharply to 6s. 6d. on unfounded rumours that the Company's properties were to be confiscated by the Mexican Government. Although an announcement has now been made that this is not the case, the shares have only recovered to 6s. 9d. I still consider them to be a promising speculation.

THE BOURSES IN AIR MAIL WEEK

Paris:—

There was an uncertain tone in most sections of the Bourse during the week under review. During the early part of the week prices were lower due to heavy profit-taking. Later, on the satisfactory conclusion of the Anglo-French Agreement, several advances were registered. But a relapse occurred owing to the absence of any reply from Germany to the recent Franco-British proposals. Operators are unwilling to open up fresh commitments pending a decision of the Gold Clause cases in America.

On the Parquet Rentes and Banks were irregular. On the 2nd instant Bank of France fell from 11.075f. to 10,850f. and Credit Foncier from 3,820f. to 3,725f. Suez Canal shares were firmer.

Among Internationals Central Minings gained 11f. to 1,636. Royal Dutch Petroleum was fluctuating. On the 2nd instant, it fell from 14,980 to 14,820. Later it advanced by 105f. to 14,925 and sagged again. At the end of the week, they were inclined to harden. Rio Tintos fared badly and were quoted low throughout the week.

On the Coulisse, Diamond shares were uninteresting. There was some activity in the Gold Mining groups for a time but towards the close of the week dealings in this group were of a restricted character and price movements in the majority of cases were against holders.

Industrials displayed some uncertainty and occasionally price movements were rather wide in both directions.

Berlin:—

The week ended on the Bourse with a firmer tone and a more hopeful sentiment. There was some uncertainty during the early part of the week as to the attitude to be adopted by Germany towards the London Agreement. Banks shares were again the best feature of the week. Commerce und Privat Bank rose by 1¼ to 82¼. On the 4th instant Industrials were weak, Farbenindustries closing with a loss of over a point at 143.90. They were better the next day, Farbenindustries being up by ¾ and Dynamit Nobels by 2¼ to 80. Electricals were irregular, but on the last day of the week under review leading Electricals showed some improvement. Minings which were weak throughout the week, Harpeners being once quoted as low as 102 showed moderate improvement. Steels also improved. Rayons were featureless. Shippings were irregular.

On possibilities that substantial benefits will accrue from television development, *Baird's Television* shares have been run up to exorbitant prices, while *Gaumont British* 10s. ordinary shares were at one time 2s. 6d. up from the closing level of last week, on the company's interest in the Baird concern. For the time being I consider all these shares to be fully valued. The best speculation is *Electric and Musical Industries* 10s. ordinary shares at 34s. This concern is in a very strong financial position. I understand that it has developed an excellent television process.

There has been some very influential buying of *Westinghouse Brake and Saxby Signal* £1 ordinary shares up to 26s. 6d. On recent results, the shares look over-valued, but market interests tell me that the Company is getting a very large proportion of certain electrical work, both in this country and abroad.

Once the pepper and certain other commodity troubles are settled, a sharp rise is expected in the price of rubber. Rubber shares are worth attention, but for the time being only those of the leading companies, such as *Anglo-Dutch Plantations of Java, Rubber Plantations Investment Trust, Malayalam Plantations*, and *London Asiatic*, should be bought. In the case of the lesser known issues the market is difficult.

On announcement that the appeal of British Celanese against the patents decision in favour of Courtaulds had been dismissed with costs, the shares of the latter company spurted sharply to 51s. 6d. On the other hand British Celanese 2nd. preference fell to 15s. 9d. I fully expect, however, that recovery will soon set-in, as the effect of this legal decision will not make much difference to the actual trading position.

WALL STREET IN AIR MAIL WEEK

WAITING FOR GOLD CLAUSE DECISION

INCREASE IN STEEL MILL ACTIVITY

By F. Rocke

Feb. 7, 1935.

Wall Street is heartily sick of the Gold Clause ; for again the announcement of the verdict has been postponed. Though it is expected that even an adverse decision would have no serious practical consequences, traders have not been courageous enough to go on doing business. Business was very slack and turnover small, though business news is encouraging. Rail issues were very weak. Steel issues also were quoted lower owing to the anti-Trust suit filed against Republic steel. The Bill which has been forwarded to Congress recommending abolition of holding companies by 1940 had a similar weakening effect on utilities. The trend of the list was generally downward.

In the Bond market Government issues were firm. The sentiment was generally bearish. Brazilian and Chilean issues were stronger, owing to favourable reports regarding the debt service.

Rail issues were particularly weak the Dow Jones' Rail index figure going to the lowest level for several years. This weakness was accentuated by the action of Senator Wheeler, of Montana, in introducing a resolution into Congress for the investigation of Federal railroad financing. If the resolution were adopted, it might postpone further the R. F. C. lending and so precipitate more bankruptcies.

Utility companies were an irregular feature of the market. Wall Street circles are cautious in commenting on the effect of the legislation for the control and ultimate elimination of utility holding companies. The Bill which has been forwarded to Congress seeks the abolition of holding companies by 1940, and would affect such organisations as the Electric Bond and Share Co., American and Foreign Power Co. and the Cities Service Co. The Bill is viewed upon with distaste by Utility Companies, because it aims to impose taxation which would make their formation unprofitable.

The prospects for Utility Companies lie in the Administration's campaign for cheap rates which must necessarily increase the use of electricity.

The General Electric Co. manufactures every type of electric equipment and, wherever electricity is used in America, there will be found a General Electric product. This company has outstanding $2,047,000 3½ per cent. gold debentures. 4,292,963 shares of $10 par 6 per cent. Cumulative Special Stock and 28,845,927 shares of no-par Common stock. The Company gave notice of its intention some time ago to retire the whole of the Special Stock on April 15 at $11 plus accrued dividends.

Sales in 1934 advanced to over $180,000,000. In the first nine months earnings for the Common stock equalled 41 c. per share against 24 c. in the corresponding period of 1933. Dividends are paid at the rate of 15 c. quarterly.

The Common Stock has been firm unlike other stocks and this may be due to the intention to retire the Special Stock. The yield is under 3 per cent. at present ; but for those who are searching for capital appreciation in the heavy industrial section, the attraction of the stock is considerable owing to its long-term prospects.

The Westinghouse Electric and Manufacturing Co. is similar to the General Electric Co. The Company was affected very much by the depression and has worked at a loss during the last four years. The last cash dividend was paid in April, 1932. In 1933, however, as the result of an action brought against the Company under the anti-turst laws, there was a distribution of its holding of Radio Corporation stock, in the proportion of one Radio share for every two Preferred common Westinghouse shares held. Preferred shareholders had the option to exchange the Radio shares $7 cash.

There is outstanding $3,998,7000 Cumulative Participating $50 par Preferred Stock and $129,317,050 $50 par Common Stock. The Preferred Stock has rights to a cumulative dividend of $3.50 a year and then to equal participation in any distributions made after the Common Stock has received $3.50. There was a slight improvement in earnings in the first nine months of 1934 and there was a loss of $364,000 against $7,083,641 in the corresponding period of 1933. There is no yield and the Common Stock is quoted at 37 a rather high price. Longer term prospects are good and, therefore, they may be bought on any setback.

It is expected that the investment opportunities for 1935 lie in the heavy industries and E. I. Du Pont de Nemours and Co. are noteworthy in that instant. This Company produces explosives, dye-stuffs, ethyl alcohol and similar things. The capital is composed of $109,328,450 $100 par 6 per cent. Cumulative debentures stock and 11,050,613 shares of $20 par common stock. The financial position is strong. The quarterly dividend rate was raised from 50 c. to 65 c. in the second quarter of last year. In the third quarter there was an extra payment of 50 c. and in the fourth of 15 c.

At the present price of between 94 and 95 the yield on a total yearly payment of $3.10 is small—a trifle over 3¼ per cent. It is expected that there may be a greater dividend with increase in activity.

According to the "Iron Age" steel mill activity for the week was at 56.5 per cent. against 56 per cent. the previous week. Any further big strides are not expected and there would soon be a levelling off in production. This rate of activity is expected to be maintained throughout the quarter and any recession in activity is not expected except in the event of any serious labour trouble. The production of pig iron during January was 1,477,000 tons against 1,035,000 tons in December.

The number of furnaces operating was 89 against 68, with a net daily capacity of 48,000 tons compared with 33,000 tons in December.

There is talk of a strike in the automobile industry as the American Federation of Labour is dissatisfied with the Automobile Code. Mr. Green of the American Federation of Labour was of the opinion that the Code had absolutely failed to spread work because workers were compelled to work or were required to work for almost unlimited hours at the discretion of the automobile makers. But the strike is not expected before some months.

Ford world output in January totalled 105,230 units against 61,813 in January 1934. Domestic output was 91,043 units against 51,974.

Business Pointers:—

Statistics issued by the American Railway Association show that loading of revenue freight for the week ended January 26 totalled 555,800 cars, 7,200 cars decrease compared with the previous week and 5,800 cars decrease against the corresponding week of last year.

Account to the Department of Commerce, exports of automative products during December amounted in value to $12,881,000 an increase of 33 per cent. over the figures for December, 1933.

Bank clearings in the week ended February 6 totalled $905,010,000 a decrease of 7.7 per cent. on the corresponding week last year.

Broker's loans in the same week totalled $595,000,000 a decrease of $21,000,000.

COMPANY REPORTS

THE DELHI CLOTH & GENERAL MILLS CO., LD.

Report for the year ending 30th June, 1934.

The profits for the year together with Rs. 3,502-9-5 brought forward from the last year amount to Rs. 13,71,505-14-8 which the Directors propose to be disposed as under :

	Rs.	A.	P.
Dividend at Rs. 12 per share free of income-tax	4,80,000	0	0
Dividend on Preference share at Rs. 1-2 per share	45,000	0	0
Welfare work	30,000	0	0
Bonus	25,000	0	0
Pension fund	25,000	0	0
Charity	12,000	0	0
Income-tax	2,50,000	0	0
Depreciation	3,00,000	0	0
Reserve	2,00,000	0	0
Balance to be carried forward ...	4,505	14	8
Total ...	13,71,505	14	8

The profits in the cotton mills are going down but great efforts are being made to cut down the expenditure on all sides. The reduction of personnels is a very unpleasant job but it has got to be done. The Directors are making every effort to create as little hardship as at all possible.

The erection of sugar factories at every station on both sides of Daurala where the sugar factory is built and the excessive rains last year brought about an acute shortage of cane with the result that the sugar cane had to be brought by rail from places as distant as 300 miles which occassionally by the time it reached the factory had no sugar left in it. The average cost of sugarcane during the season was about -/7/- per md. and at times it amounted to -/10/- per md. Due to these causes the profits in the sugar factory were disappointing. The new excise duty and the fixation of the minimum price of cane will in future reduce the profits further. To meet the changed conditions and to reduce the manufacturing cost the Directors have extended the factory which is now capable of dealing with 800 tons of cane per day. The Directors are glad to report that they have started a cane farm on about 500 acres land, which, is so far doing quite well.

They have pleasure in reporting that in the later part of the year they thought of building a cotton mill at Lyallpur. The negotiations with the Government of the Punjab regarding the lease of the land at Lyallpur and the rate of electricity there took considerable time. It was however, possible although the personal interest taken by His Excellency the Governor of the Punjab and the other high officials to get possession of the land early this year and the directors beg to convey their sincerest thanks to them. The land at Lyallpur has been taken on a long term lease on reasonable rent. It has been arranged with the Punjab Government that the directors will offer 5333 ordinary share to the residents of Punjab at Rs. 150 per share on easy terms of payment subject to certain conditions. They have also agreed to take two directors from amongst the shareholders of the Punjab on the Board of Directors as also to form a local advisory board to give the management the benefit of their advice and experience on local matters which will no doubt prove of immense advantage to the company.

The building work at Lyallpur was started towards the end of May 1934. The order for 20,000 spindles and 500 looms with necessary preparatory machinery was placed in February 1934. The machinery erection work is now in full swing and they hope to start running the machinery on trial.

During the year under review there was a partial strike in the Delhi Mills. It was brought about by selfish people outside the mills. The work people in general did not sympathise with the agitators and were very loyal but some of them absented themselves on account of fear of violence. The directors are sorry to say that over 100 persons were seriously injured during the strike. Some of the officers and a number of workers brought the timid but willing persons from their homes at great personal risk.

The law suit for Rs. 4,11,691-2-10 referred to in the previous report is still pending in the High Court of Judicature Allahabad.

The Directors retiring this year by rotation under Article No. 91 of the Articles of Association are Dewan Sher Singh and Rai Bahadur Dr. Hari Ram.

(Signed) Sobha Singh, Narain Datta, Hari Ram, Krishnajas Roy, Ram Roop, Sher Singh.

Synopsis of the balance sheet :—

Liabilities—	Rs.
Capital	20,00,000

PREMCHAND JUTE MILLS, LD.

Report for the half-year ending 13th October, 1934.

After providing for Depreciation, Income-tax and Super-tax Reserve there is a net profit of Rs. 2,48,958-7-11 which, with the balance of Rs. 2,56,349-3-5 brought forward from the previous Accounts, amounts to a total of Rs. 5,05,307-11-4. Out of the above sum of Rs. 5,05,307-11-4 the following amounts have been paid after the expiry of the above half-year :—Reduction of Loan Rs. 2,00,000, Capital Expenditure Rs. 37,383-13-6, total Rs. 2,37,383-13-6.

The Directors propose to distribute the balance of Rs. 2,67,923-13-10 as follows :—Payment of 6 per ent. Dividend, *i.e.*, Rs. 3 per sahre for the half-year Rs. 1,20,000, transferred to Reserve Rs. 1,40,000, carried forward Rs. 7,823-13-10, total Rs. 2,67,923-13-10.

Janokinath Roy, D. N. Ballav, Narendra Nath Law, J. N. Basu—Directors.

The balance-sheet is as under :—

Liabilities—	Rs.	*Assets*—	Rs.
Capital ...	39,67,885	Block (net) ...	38,48,466
Debts ...	8,96,967	Jute ...	6,67,539
Profit & Loss ...	5,05,308	Cloth & Bags ...	1,08,194
		Stores ...	56,848
		Outstandings ...	65,234
		Cash & Deposits	6,23,879
Total ...	53,70,160	Total ...	53,70,160

BANSDEOPUR COAL CO., LD.

Report for the half-year ended 31st December, 1934.

The Profit on the half-year's working is Rs. 2,841-1-9 and after providing a sum of Rs. 15,111-6-6 for Depreciation, the Profit and Loss Account shows a debit balance of Rs. 13,946-12-7.

6,878 tons Steam Coal were raised at Bansdeopur Colliery during the period under review and 6,439 tons were despatched.

The stock of Steam Coal at the Colliery on 31st December, 1934, was 8,184 tons.

C. G. Arthur, C. L. Phillipps, P. H. Crete, G. L. Scott—Directors.

Jardine, Skinner & Co.—Managing Agents.

The balance-sheet is as under :—

Liabilities—	Rs.	*Assets*—	Rs.
Capital ...	6,00,000	Block (net) ...	3,99,120
Reserves ...	1,69,725	Coal & Coke ...	32,599
Debts ...	21,778	Stores ...	5,997
		Outstandings ...	15,247
		Cash & Invests.	3,24,593
		Profit & Loss ...	13,947
Total ...	7,91,503	Total ...	7,91,503

MARINE COAL CO., LD.

Report for the half-year ended 31st December, 1934.

After bringing in the sum of Rs. 17,583-3-2 from the last Account and providing a sum of Rs. 5,337-13-10 for Depreciation, the Profit and Loss Account shows a credit balance of Rs. 18,394-6-7. It is proposed to carry forward this amount to next half-year.

8,883 tons Steam Coal were raised at Marine Colliery during the period under review and 7,195 tons were despatched.

The stock of Steam Coal at the Colliery on 31st December, 1934, was 1,714 tons.

C. G. Arthur, P. H. Crete, G. L. Scott, F. M. Buckland —Directors.

Jardine, Skinner & Co.—Managing Agents.

The balance-sheet is as under :—

Liabilities—	Rs.	*Assets*—	Rs.
Capital ...	2,50,000	Block (net) ...	2,07,694
Reserves ...	1,32,145	Coal ...	3,427
Debts ...	14,678	Stores ...	1,299
Profit & Loss ...	18,394	Outstandings ...	14,394
		Cash & Invests.	1,88,403
Total ...	4,15,217	Total ...	4,15,217

SEEBPORE COAL CO., LD.

Report for the half-year ended 31st December, 1934.

After writing off Rs. 6,567-4 for Depreciation, there is a balance of Rs. 35,413-10-9 at the credit of Profit and Loss Account from which the Directors recommend :—Dividend of As. 10 per share Rs. 25,000, carry forward Rs. 10,413-10-9.

As compared with the previous half-year, raisings improved but despatches were less. Owing to a larger proportion of Steam Coal having been despatched, the average price realized from sales was higher.

Andrew Yule & Co., Ld., J. H. S. Richardson—Director, Managing Agents.

The balance-sheet is as under :—

Liabilities—	Rs.	*Assets*—	Rs.
Capital ...	2,80,000	Block (net) ...	2,20,000
Reserves ...	2,00,000	Coal ...	347
Debts ...	80,358	Stores ...	3,168
Profit & Loss ...	35,414	Outstandings ...	60,204
		Cash & Invests.	3,12,053
Total ...	5,95,772	Total ...	5,95,772

THE BANK OF MYSORE, LIMITED.

The Directors have pleasure in submitting to the Shareholders the Balance Sheet and Profit and Loss Statement as at 31st December 1934.

The net profit of the Bank for the year ending 31st December 1934 amounts to Rs. 4,89,606-7-0 which sum together with Rs. 35,337-5-8 brought forward from 31st December aggregates Rs. 5,24,943-12-8.

	Rs.	A.	P.
An Interim Dividend at the rate of 12 per cent. per annum, plus a Bonus of 2 per cent. per annum, ended 30th June, 1934 which absorbed	1,40,000	0	0
Placed to Reserve for contingencies ...	50,000	0	0
The Directors now Propose:—			
To pay a final Dividend at the rate of 12 per cent. per annum and a Bonus of 2 per cent. per annum, free of income-tax, for the half-year ended 31st December 1934 which will amount to ...	1,40,000	0	0
To transfer to Reserve Fund	1,00,000	0	0
To pay a bonus to staff of one month salary, about	20,000	0	0
To carry forward to next account ...	74,943	12	8
Total ...	5,24,943	12	8

The Amount of Rs. 2,25,000 held under Building Fund has been transferred to the Reserve Fund.

The Bank's Accounts have been audited by Messrs. Fraser and Ross, Chartered Accountants and by Mr. B. V. Narayana Reddy, Assistant Comptroller, on behalf of the Government of Mysore.

Messrs. E. A. Gardiner and G. K. Mallappa are the two Directors who retire on this occasion. They are eligible for re-election and offer themselves accordingly.

The Auditors, Messrs. Fraser and Ross, also retire and offer themselves for re-appointment.

The Dividend will be payable on and after 8th February 1935.

Synopsis of the Balance Sheet :—

Liabilities—	Rs.
Capital	20,00,000
Reserve	22,25,000

1934—IN RETROSPECT

THE NEED FOR INTEGRATION OF NATIONAL ECONOMIES

To review the old year has of late become an increasingly difficult task. So long as a connected account of the principal events threw light on the problems, it sufficed to chronicle them in some sequence ; and the reviewer had no insuperable difficulty. But during the last few years, most developments are of such a conflicting nature, that there is a special responsibility in regard to their interpretation. For what distinguishes a history from a chronicle is that the former is, or ought to be, illuminating. In our review of 1932 we observed that the task of determining the exact place of the year in the march of human history is better left to the future historian, as well because it is his legitimate task as because we are inevitably incompetent to discharge it. And we added that all that we would attempt would be to relate the events and developments of the year to contemporary hopes and fears. A similar attitude would at the present time be inappropriate. For, if we are thinking of the world depression and, generally speaking, the ills that are born of the conflict between nationalism and internationalism, mankind has left behind the stage of nerveless hope and fear. For, more than once, hopes and fears have alike been belied. Five years of the depression have shown that there is as little reason for mankind to live under a harrowing nightmare as to hope for an early smooth return to the former heights of prosperity. There is a widespread recognition of this fact, and old hopes and fears have thus lost a great deal of their former importance. In other words, this is not the time to indulge in moods ; it is rather the time for a careful study of conditions, the definition of objectives and the exploration of methods by which, given the present conditions, such objectives might be realised. During the course of the depression, these conditions and objectives have been changing. To record these changes is the prime purpose of an annual review ; but its value lies in their proper appraisement.

Can we then make history of this review of 1934? The lack of perspective is too obvious an obstacle to call for mention. But we believe that, as it is possible to study the five years of the depression together, this obstacle is not so ponderous as one would suppose. The events are so momentous and the reactions are so clear that it should be possible to see on what lines the world is moving.

The whole of the last quinquennium has been, so to say, a vast school in which the nations jointly and severally have been learners. At the beginning of the depression, it was thought that the world economic organisation was sound and that such changes as were suggested were not so much in the nature of reform as in the nature of the last touches making for perfection. When the depression set in, it was believed that it was one of those cyclical phases, which have within the very womb of the depression the seeds of a more healthy recovery. By the end of 1930 the term "unprecedented" had come to be used freely in reference to the depression. The financial breakdown that occurred in the middle of 1931, opened the eyes of the people to the serious disorganisation in the machinery of world economy and the uphill nature of the task of ensuring the necessary changes. When in the autumn of 1932 a slight change for the better was noticeable, and this source of encouragement disappeared almost as fast as it appeared on the horizon, it was realised that there was no broad highway leading to recovery and that the efforts to that end will have to be directed along different channels at the same time. From this standpoint, the last quinquennium may be divided into two periods with September 1931 as the time of demarcation. In the former period the nations were practically content to watch the relentless spread of the depression to all countries and to all departments of each national economy. The forced abandonment of the gold standard in Great Britain enabled that country to follow a monetary and economic policy with a freedom which the fetters of the gold standard could not have permitted. In the year 1932 the British Government were content to follow a policy of cheap money and watch its effects on the national economy. When they found that cheap money did not produce a trade revival they felt that the least they could do with it was to raise the level of giltedge prices and secure substantial savings for the tax payer on account of interest charges by favourable conversions of the then existing loans to a lower interest basis. Later came the policy of bilateral trade pacts, designed to secure the markets for British exports in each foreign country together with a policy of consolidating the Empire trade through the Ottawa Pacts. The immediate exhilarating effects of this policy were, no doubt, noted by other countries, who imitated the British example by linking their currencies to sterling and responding to the British policy of trade pacts.

The Continental nations on the other hand, were bound to the gold standard and the increasing difficulties caused by the mounting up of the adverse balance of trade forced them to effect a system of import restrictions and exchange control. All these restraints on trade were imposed in the spirit of an experimental planning of national economy. In March 1933 came the crisis in America and the announcement of the policy of the New Deal by Mr. Roosevelt. It was akin to the British policy, in that it was based on a devaluation of the currency sufficient to bring the volume of existing indebtedness within the capacity of the debtors. There are other features of the New Deal with which our readers are only too familiar. 1934 may be said to be the period in which the effects of these attempts at planning were watched closely by the authorities concerned and by foreign countries. It may be said generally that within every country these attempts at planning have succeeded in bringing about a reconstruction of the internal economy within the limits permitted by a stationary or a falling world trade. We imagine that no country in the world has altogether regretted having experimented in the reconstruction of the internal economy. Equally may it be said that no country in the world is altogether satisfied that it is possible to raise the national prosperity to the old levels without a substantial increase in the volume of international trade. The significance of 1934 lies, therefore, in our estimation, in the value of internal economic reconstruction such as has been so far achieved and in the necessity of a certain degree of expansion of world trade for further progress of each nation as well as the world at large.

It seems, therefore, legitimate to suppose that conditions favourable to a second meeting of the World Economic Conference and fresh attempts at concerted international action are now being prepared. It is well-known that, however well meant the World Economic Conference of 1933 might have been, it was manifestly premature and that the premature attempt was a virtual invitation to failure. We say the World Economic Conference was premature because the primary purpose of the depression in this scheme of things must be that the nations should overcome their objections in regard to international trade, and that they should heed, if necessary under the pressure of the depression, to the claims of internal economic reconstruction. So long as the Governments of the world imagine that the be-all and end-all of economic policy is to expand the volume of exports, neither the world nor national economy can be on a secure basis. Now

that the Governments have explored to a large extent the scope that there is for internal reconstruction, they should be able to have better ideas on the question of integrating national economies into a world economy.

The year 1934 may be said to have taught the Governments at once the importance and the inadequacy of internal economic reconstruction. It may be judged from this reading that the year was free from any sensational developments in the sphere of international politics which was quite unlike its predecessor. There was no outburst of active belligerence in the Far East or in Europe, though in both the spheres there were frequent rumblings which, it was expected, might lead to some catastrophe. Throughout the latter half of the year, Central Europe showed signs of a state of tension, as the European nations had again taken to the old game of pre-war diplomacy and fishing for alliances of an offensive and defensive character. In Germany, the year is remarkable for the consolidation of the power of Herr Hitler, who, on the death of Von Hindenberg on August 2, appointed himself the President of the Reich and had it ratified by a plebescite which proved to be overwhelmingly in his favour. The approach of the Saar Plebescite further disturbed the atmosphere. Both France and Germany were believed to have exerted themselves strenuously in order to influence the ultimate decision of the Saarlanders on the question of their future government. There was the fear that the clash between the rival parties might lead to a breach of the peace. But happily the Governing Commission of the League of Nations acted wisely and firmly and prevented any such danger.

The international conferences continued through a course of infructuous discussion. All this is, perhaps, an indication of the truly difficult problems which each government had to face within its own sphere. In Great Britain the Government were impressed with the severe limitations of their policy of bilateral trade pacts. Germany was faced early in the year with the threat of a heavy adverse balance of trade. The Reichsbank's reserve of gold and devisen fell to dangerously low limits; and the Government were obliged to institute not only a system of exchange control but also a new policy of restricting imports and rationing raw materials among the usual consumers. It is also said that Germany had during this year devoted much attention to the problem of finding synthetic substitutes for raw materials which has all along been imported from abroad. These efforts have, according to all accounts, already met with some success. Once they are perfected, it might well prove that the difficulties of 1934 have been for Germany a blessing in disguise. But as things are, Germany cannot overlook the fact that her progress along the path of recovery is closely bound up with the progress of the rest of the world. In America the year was remarkable for a disquieting halt in the progress of the recovery, which began with the institution of the New Deal of Mr. Roosevelt. The administrative organisation of the N. R. A. was reorganised, and even General Johnson, who had done a great deal for the N. R. A., had to yield place to others. The Government were faced with many a threatening strike in industry ; and though in all these crises the personality of Mr. Roosevelt triumphed over the troubles, and serious disorganisation was avoided, these disturbances showed that the New Deal had certain misfits which had to be put right without much delay. As we are not concerned with details at this stage, it should suffice to point out that before the end of the year Mr. Roosevelt was increasingly persuaded that the time had come for every nation in the world to devote attention to the question of restoring international monetary policy. The same may be said even of the gold bloc countries, who, however, were frequently affirming their faith in the gold standard and their determination to maintain the existing parities. But their problems grew more pressing than ever during the year under review. The occasions, in which confidence in the gold standard currencies was seriously impaired, leading to a flight of funds, were numerous. There is hardly any gold standard country which did not witness an appreciably strong movement for devaluation. Though these movements did not gain in strength, they point to the fact that 1934 revealed with growing clearness the inadequacy of the national policies and the importance, if not urgency, of bringing about an international understanding.

We are yet a long way from international understanding as regards the distribution of industries and of productive work generally. What 1934 may be said to have done is to create in the minds of each government a recognition of the importance of an international monetary order and a growing disposition towards the question of stabilisation of international exchanges. Thus viewed, 1934 is no year of regrets. On the other hand, there is reason to feel thankful that it did not like 1933 witness a premature effort and suffer a serious set back. It leaves unchanged, and even, perhaps, with a little addition, the legacy of problems which it inherited from the past. But it leaves also a human race, with a better understanding of those problems, born of disillusionment about short-cuts or harmful palliatives.

INTERNATIONAL FINANCE IN 1934

The principal features of international finance in 1934 may be easily surmised from the general survey of the year in the previous section of this Supplement. International trade showed no manner of expansion. But the inevitable result of this was that in those monetary centres, which finance international trade, there was, generally speaking, a glut of funds which produced their natural consequences. In London, these easy money conditions were accentuated by the policy of the British Treasury. Apart from the fact that the preservation of cheap money has been the avowed policy of the British Government, they have also, by reducing the supply of Treasury Bills, pushed down money and discount rates to a level at which the rise in prices of Government and fixed-interest yielding securities became inevitable. It is calculated that in London the reduction in the supply of commercial bills is about 40 per cent. of the normal and that the reduction in the floating debt comes to about £42.4 million. Conditions in London are always the most potent factor in international finance and determine the general trends of international money rates. In such conditions the low bank rates of 1933 were more or less stabilised throughout the year under review.

The table at the head of the next column giving the official rates of the important central banks of the world, shows that monetary conditions during the year remained undisturbed.

BANK RATES IN 1934.

End of Months of 1934.	London	Paris	Berlin	New York Fed. Reserv	Amsterdam	Brussels	Rome	Tokio	Calcutta

Average	2.00	2.63	4.00	1.54	2.50	2.92	3.17	3.65	3.50

It is significant of the present state of national and international economy that the cheap money policy has done little to raise the general level of prices. Leaving aside the case of India, where barring low money rates, there was little of the cheap money policy as such, even in other countries, the general level of prices has shown no appreciable improvement. The following table gives the index of wholesale prices in important countries.

While the bank rates have been, in the main, steady, short money rates have been consistently downward, with the result that surplus funds have been forced into giltedge. The virtual materialisation of Mr. Keynes's prophecy, that the yield on investments must fall to the level of 2½ per cent., is, perhaps, the most significant feature of the year 1934. A review of the changes in the giltedge market both in London and India will be found in some detail in the stock markets section and need not be duplicated here.

It is interesting that the upsets in the exchanges did not seriously interfere with the development referred to above. The year saw no mitigation of the instability of the international exchanges, though 1934 was free from major upsets like the devaluation of any important currency or the abandonment of the gold standard by any important nation. The general alignment of the nations along the lines of gold and non-gold countries continued. It may even be said that the gold bloc countries drew together more closely. But no tangible results followed. In fact the weakness of the gold currencies became more and more apparent as the year advanced to its close. Both in France and in Belgium the difficulties of balancing the budget loomed large as one obstacle in the way of the deflationary policy, without which their respective currencies would be doomed. The position of the principal industries also required a liberal credit policy, which was inconsistent with the deflation which the exchange situation clearly called for. France and Belgium saw a significant movement for devaluation. And in such a situation the currencies were naturally exposed to every adverse circumstance that developed. When at the end of January the United States fixed the dollar at 59.06 cents., France felt obliged to raise the bank rate to 3 per cent.; and it was not till April that the rate could be reduced to the old level. Italy began to experience her troubles only in the latter half of 1934. The over-valuation of the lira had been telling all along on Italy's balance of payments; and though the financial austerity of Mussolini withstood all tempta-

Current Accounts—Opened free of charge.
Fixed Deposits—Received at interest.
Savings Bank—Deposits received and interest allowed.
Government and other Securities—Received for safe custody, Purchases and Sales effected, Interest and Dividends collected and credited to account or remitted in accordance with instructions.
The purchase and sale of Government Securities undertaken at all Branches for the Public generally.
Loans and Cash Credits—Granted, and approved Mercantile Bills discounted.
Sterling and Rupee Letters of Credits Issued.
Rates, Copies of Rules, Powers of Attorney, etc., may be had on application at any of the Local Head Offices, or Branches of the Bank.

tion, the decrees, which were promulgated towards the close of the year calling upon all individuals under pain of heavy penalties to hand over their foreign credits to the Government, were a significant confession of the difficulties. Germany went further on the path of state regulation and control ; and the difficulty of paying for imports induced the Government to institute a system of restricting them.

The following table, from the *Economist* gives the principal exchange rates at the end of each quarter :

	Parity with £	Dec. 30, 1933	March 31, 1934	June 30, 1934	Sept. 29, 1934	Dec. 31, 1934

INDIAN FINANCE IN 1934

1934 opened with money conditions distinctly easier as compared with those which prevailed towards the end of 1933. As usual the close of the year was characterised by a marked stringency owing to the requirements of banks in regard to window dressing ; and day-to-day call money was quoted at between 3 and 4 per cent. With the New Year,call funds began to be quoted at about 3 per cent. The first fortnight showed such an excess of sales of treasury bills over maturities that the Government reduced the amount of weekly tenders from 2½ to Rs. 2 crores. This was announced on January 9th ; and in the week following a further reduction of Rs. 1½ crores was effected. The cut in the treasury bills on offer accentuated the easy money conditions ; and the result is seen in the decline in the treasury bills discounts from Rs. 2-8-11 per cent. at the beginning of the year to Rs. 1-13 in the middle of February. During the middle of February money rates began to stiffen owing to the flow of funds for financing the rice crops in Rangoon. The movement of the cotton crop to the ports and the presence of large stocks of cotton awaiting shipment to Japan and the resumption of sales of intermediate treasury bills on February 14 accentuated the firmness of money rates. This was the signal for a reversal of the downward trend of treasury bills rates during the first one month and a half of the year. The upward trend continued from the middle of February to the middle of April, when the rate of Rs. 2-8 per cent. which is the highest price for the year was touched.

The two landmarks in the moneatry history of 1934 are the two new loans which were issued on the 31st May and September 5. From the middle of April, the Finance Department devote their attention to the question of the usual new loan of the year, that is, as soon as they are free from the preoccupations of the budget. On April 24, the Government discontinued the sale of intermediate treasury bills which were begun on February 14. The discontinuance of intermediates had its effect on the money rates in the following months. This is only natural as in the previous weeks the market's offtake of treasuries on tap had been nearly Rs. 1¾ crores on an average. With such a large demand removed, treasury bills rates came down rapidly to the record low level of as. 12-4 on July 17. During that week, intermediates were sold to the extent of Rs. 23 lakhs at a rate of as. -11- per cent.

It was in conditions like that that the Government announced on May 31, 1934 a re-issue of the 3½ per cent. 1947-50 at an issue price of Rs. 98-8 per cent. Subscriptions were invited in the form of cash, treasury bills, 4½ per cent. 1934 bonds, and 4 per cent. 1934-37 loans and the amount of the issue was restricted to Rs. 32 crores. The results of the loan are as under :—

	Rs.
By Cash	5,24,28,100
,, Treasury Bills	97,45,100
,, Conversion of 4½ per cent. 1934 Bonds	4,71,50,200
,, Conversion of 4 per cent. 1934-37 Loan	14,19,37,000
Total ...	25,12,62,400

Considering that the Government had stipulated a sum of Rs. 32 crores the loan might be considered only as a partial success ; but as the Government's requirements were well within the available amount of Rs. 25 crores, the loan must be deemed to have been a success. It must be added here that one of the factors that helped to lower the treasury bills discount was the expansion of currency to the extent of Rs. 3 crores against sterling assets which the Government effected in the first week of May. It was followed by the reduc-

The Bank issues Letter of Credit and transacts general banking and exchange business of every description.

tion of the amount of treasury bills on offer on the weekly auctions to Rs. 1 crore from the usual level of Rs. 1½ crores.

The month of June was altogether free from sales of treasury bills ; for during the first week of the month the Government discontinued the sales altogether after rejecting the tenders received on the 5th. It may be guessed that the heavy maturities of treasury bills during that month were met with the aid of ways and means advances of about Rs. 9½ crores from the Imperial Bank. The treasury bills sales were not resumed till the middle of July ; and during this period of 1½ months the total of the floating debt came down from Rs. 33.84 crores to a low level of about Rs. 10 crores in the middle of July.

As mentioned already, the second new loan of the year was announced on September 5. The greater part of the period between the middle of July and the beginning of September might normally be regarded as a period of preparation for the second new loan. But in point of fact, this period saw no significant changes in the rates for treasury bills : and the general trend may be said to have been upward. At the end of August the average rate of accepted tenders stood at Rs. 1-6-11 per cent. On the occasion of the second new loan, the Government were content with discontinuing the sales of intermediate treasury bills. The second loan did not call for any elaborate preparation. For the conditions were ready-made for the authorities, partly because of the firmer trend of giltedge during the period follwing the 3½ per cent. Loan and partly because the reduction of the unconverted portion of the 4½ per cent. 1934 bonds, which was made on September 15, left a large block of funds awaiting investment in the Government's new issue. The new issue was a 3 per cent. taxable loan for an unlimited amount redeemable at par on September 15, 1941 the issue price being Rs. 99 per cent. Subsriptions were received either in the form of cash or 4½ per cent. 1934 bonds.

The total amount subscribed was Rs. 10,67,31,700 of which Rs. 8,61,17,400 was by tender of cash and Rs. 2,06,14,300 by tender of 4½ per cent. 1934 bonds. The nominal value of the 4½ per cent. 1934 bonds tendered in subscription amounted to Rs. 2,04,11,200.

In the remaining months of the year treasury bills rates remained remarkably steady with slight fluctuations about the level of Rs. 1-7 per cent. and closed at Rs. 1-7-9 per cent. on the last auction of the year. The last quarter was, generally speaking, a period of easy money, though after the first week of December stringency set in owing to the banks realising their profits on the appreciation of Government securities and on account of the usual demand for money for purpose of window dressing.

The following table gives the sales and discharge of treasury bills month by month during the year 1934 :—

Sales and Discharges of Treasury Bills

(In Lakhs)

	Sales	Discharges
January ...	750	649
February ...	706	12,90
March	18,68	10,07
April	954	756
May	500	702
June	100	18 57
July	337	961
August	17,24	586
September ...	895	20
October	771	336
November ...	12,23	17,22
December ...	552	899

The rupee-rate was above parity throughout the year except for a fall to 1s. 5 15/16d. in the third week of May. Owing to the continuance of gold exports and owing to the prevalence of low money in London the Government experenced little or no difficulty in securing their requirements of sterling. The following table gives the monthly purchases of sterling.

Month 1934		In thousands of £ Sterling purchased in India	Average rate s.	d.
January	...	6,702	1	6.078
February	...	9,438	1	6.0702
March	...	7,277	1	6,0625
April	...	4,801	1	6.0625
May	...	2,581	1	6.0625
June	...	430	1	6.0625
July	...	1,050	1	6.0625
August	...	2,440	1	6.0625
September	...	4,716	1	6.0625
October	...	2,765	1	6.0625
November	...	1,539	1	6.0625
December	...	3,690	1	6.0625
	Total	47,429	1	6.064

1934 was a year of no regrets from the standpoint of the Government. Though, doubtless, better results might have attended the two loan issues, the Government could well feel satisfied with such as were achieved ; and they could desire no more than that the conversion of 3½ per cent. Paper to a lower interest basis comes as almost a demand from the market itself.

IT TAKES SKILL TO LAND BIG FISH

Railway Sleepers.

THE STOCK EXCHANGES IN 1934

The Stock Exchanges have had a busy time of it in the year 1934. Throughout the period and, particularly, in the latter half, there was a steady improvement, which was considerably accelerated during the close of the year. Each principal exchange and almost every section thereof witnessed higher prices and better turnover. Conditions in the last quarter may almost be described as a boom ; and it is remarkable that only in a few cases may the shares be said to have been somewhat overdone. In other words, the activity in the exchanges has throughout the year been of a remarkably healthy character. Investors and operators tried to assess the relevant factors rather than allow themselves to be influenced by undue pessimism or to be taken off their feet by the activity prevalent in the markets.

To this sustained improvement in the Stock Exchanges, a variety of factors have contributed. Though the general outlook of business has not improved considerably, conditions within each industry lent themselves during the course of the year to a more optimistic view of the future. The staple industries, like jute and cotton, benefitted to no small extent from the improved position of the raw material.

So far as cotton is concerned, the year began with the conclusion of the Indo-Japanese Trade Agreement, which helped a great deal to remove the prevalent uncertainties and enable the industry and the markets concerned to take a definite stand. The cotton market began to experience the beneficial effects of the Indo-Japanese Agreement from the very beginning ; and, as will be seen from the relevant section of this Supplement, cotton had one of the very best years from the standpoint of a steady improvement in prices and security of markets. The cotton mill industry, especially in Bombay, took a rosy view of the future and for the greater part of the year Bombay mills have worked double-shift. The consequent increase in the output has not created the fears of a slump in the price of cotton goods. It has, on the other hand, encouraged better expectations about the results of the Companies' working during the year.

In jute, it was only in the latter half that the Government of Bengal overcame their previous vascillation and decided in favour of sponsoring a movement for restriction. When it was made increasingly clear to the markets that the Government meant to put forth their best to achieve restriction, the outlook of raw jute and jute goods alike improved markedly. The old jute companies, which have built up a specially sound financial position, therefore, came to be apprised of their true worth. The last quarter of the year witnessed a virtual boom in jute shares.

The Steel Companies have also participated a great deal in the improvement in the Stock Exchanges. Though the report of the Tariff Board was a verdict against the claims of the Tata Company for protection, the adverse recommendations and the legislation that was subsequently introduced to give effect to them have not darkened the outlook of the Tata shares, which have continued on the upward trend through 1934. The Tata Power Companies have had to their credit a substantial measure of financial and administrative reconstruction ; and this, together with the basic factors, has enabled the shares of this Company to increase in value during the year.

While it is possible and necessary to mention the circumstances of each industry, which have enabled investors and operators to take a brighter view of the future, it must be mentioned that the most important factor in the Stock Exchanges of the year is the prevalence of low money rates and the consequent rise in the price of giltedge securities. The prevalence of low money rates, it is well-known, is an international phenomenon, the reasons for which have to be sought partly in the present predicament of world trade and industry and partly in the policies deliberately pursued by the monetary authorities in Great Britain and America. The British Government decided about the middle of the year that they would not rest content with the economies that had already been secured for the British Exchequer by way of reduction of interest charges and that it was both wise and feasible to secure a higher level of giltedge prices and to derive the benefit of lower charges on both the floating and permanent public debt. This attitude of the British Government is natural considering that there was no going back from the cheap money policy and that, if cheap money was not to effect as much of a revival in trade as was desirable, the least that Government could do was to reduce the interest charges. There was no going back upon the cheap money policy, because owing to the frequent loss of confidence in the Continental currencies, London was as frequently subject to an influx of foreign funds and these funds flowed into the only avenue available, namely, giltedge. The giltedge prices in the London market, therefore, steadily rose under the pressure of monetary ease. The sight of the Government of India sterling stocks rising to higher and higher levels naturally had their effect on Government paper in India. Up to a point, the rise in giltedge satisfied the investors and operators, but afterwards the low yields forthcoming on giltedge and the growth of the feeling that further rises might be difficult, brought about a transference of the attentions of the market to the better class of equities. It was at this stage that the public was able to see and appraise the improvement in the outlook of each industry and, as hinted already, the public appreciated not only the improved outlook of each industry but also the financial position that had been built up by each company ; with the result that for once since a long time there was a genuine and sustained interest in equities. At the close of the year this upward trend of giltedge and share prices had by no means reached its end, though in certain markets like jute and giltedge there was a slight setback towards the close.

GOVERNMENT SECURITIES

Government securities, undoubtedly, have been the star feature of the year in the Stock Exchanges. The main factors working for an increasingly higher level of prices have already been indicated in the introductory review. The impetus in the earlier stages came mainly from London where the conditions of the money market and the policy of the Government alike were working in the same direction. Almost throughout the year the Indian giltedge market was content to lag behind the London market. And the rupee securities of the Government of India were well below the level of prices of sterling securities. It was not till the year end that $3\frac{1}{2}$ per cent. rupee paper came on a par with $3\frac{1}{2}$ per cent. sterling. And at one stage the former was even somewhat ahead of the latter. It may be said of the closing month of the year that the Indian giltedge market showed some signs of having become independent of developments in London.

But, as mentioned already, the improvements that occurred in the British market during this year are to be attributed mainly to the developments in London. The principal landmarks of the giltedge market during the year are the issue of $3\frac{1}{2}$ per cent. 1947-50 loan at Rs. 98-8 in May last and the issue of 3 per cent. seven year bonds on September 5, 1934. Unlike the Government of England, the Government of India have always been slow not only to create the conditions in which loans on more favourable terms could be issued, but also to take advantage of such conditions when they are ready prepared for them. There can be no doubt that on the occasion of both these issues a better manage-

ment of the market would have ensured both a better success for these loans and a better price. In each case, the issue of the loan marked the development of favourable conditions rather than the climax of well-planned efforts on the part of the Government. 3½ per cent. paper ruled at about Rs. 82 at the beginning of the year under review. But as the general financial policy and position unfolded themselves and as easy money conditions persisted with the accompaniment of low yields on Treasury Bills in England and India, 3½ per cent. went up steadily to about the level of 89 by last April. The feature of the giltedge market throughout the year has been that there were certain levels of prices which psychologically had an immense importance for the market. They were, so to say, hurdles which the market was at some pains to clear and which caused on the various occasions doubts and hesitancies in the minds of the investors and operators whether that particular level would or would not be exceeded. The table at the end of this article will show how these hurdles were successfully cleared.

It was only towards the end of the year that it was widely recognised that giltedge was bound for a level of prices at which the yield would work out to little more than 2½ per cent., the rate which was prophesied long before by Mr. Keynes.

JUTE SHARES

The principal features affecting the jute section of the Calcutta Stock Exchange have already been indicated. The outlook in the beginning of the year could by no means have been regarded as bright. For neither the jute nor the hessian markets seem to have good prospects ahead. But, as the year advanced, it was realised that the increased prosperity of the United States as a result of Mr. Roosevelt's recovery would reflect itself in a revival of the American market. At the same time, the Government of Bengal were gradually overcoming their distaste for officially sponsoring the movement for the restriction of the jute crop. In the middle of the year first signs of the change in opinion were visible ; but it was not till the end of the third quarter that the market was able to command faith in the willingness and capacity of the Government to achieve substantial reduction of output of jute. In the last quarter, the boom in jute shares was helped a great deal by the fact that the yield on giltedge had come down very low, while the value of the jute shares, both from the standpoint of yield and from the standpoint of their intrinsic worth, were very attractive. The table at the end of this article shows the trend of prices in the scrips which have been traditionally regarded as the barometer of the market.

COAL SHARES

As is well-known, there was no reason during the year to expect any phenomenal recovery in the price of coal shares. The coal industry has been subject to a slump which is ever older than the World Economic Depression. But the fortunes of coal shares were subject to fluctuations as the Government allowed a great deal of uncertainty to prevail regarding the fate of the scheme of restriction which the Colliery Owners submitted to them for their consideration. Strangely enough, the Government have been hostile to a scheme of statutory restriction from the beginning, but instead of announcing their decision they gave scope for rumours of various kinds. Interested speculators were prepared to give currency to the rumours just as it suited them. There was also another element of uncertainty, namely, whether or not the coal companies would be capable of reaching an agreement on the question of the rates at which coal was to be tendered to the Railways. In spite of both these factors which ultimately proved to be adverse to the industry, coal shares were able to participate in the general improvement of the year end, the reason being that, when it came to a question of competition, the better classes of companies will soon be able to come into their own.

IRON AND STEEL

In the Bombay Stock Exchange the Tata shares were boomed a great deal. The impetus came from an objective examination of the prospects of the Tata Iron and Steel Co. necessitated by the adverse report of the Tariff Board. This examination revealed the fact that, though protection would have been a welcome advantage for the steel industry, it was by no means indispensable. The Tariff Board had also shown clearly the understanding to which the Iron and Steel Co. had progressed from the state in which protection was found necessary by the Tariff Board of 1926. The balance-sheet position also revealed great possibility for the shares and except for occasional setbacks the Tata scrips advanced consistently to higher and higher levels of prices as will be seen in the following table.

The Tata Power Companies, as mentioned in the introduction to this article, carried out during the period a measure of financial and administrative reorganisation which, together with the generally improved outlook of the industry, helped investors and operators to apprise their shares at their proper worth.

BOMBAY MISCELLANEOUS

Interest and activity in miscellaneous shares in Bombay till the middle of February. By the end of February Cements came to the forefront with Bundi cement advancing to Rs. 29-8. During March the Electricity shares showed a substantial rise in prices. At the close of March India Cements changed hands at Rs. 380. A firm tone was evident in all sections in the beginning of April. But prices sagged before long on profit-taking during the midmonth and the market closed dull, Bundi quoting Rs. 28-6 and India Cements at Rs. 381 ex-div. India Cements opening at Rs. 369-6 in May rose to Rs. 396-14 on the 5th but eased of gradually to Rs. 376-4 on the 18th. During June and July there was a gradual rise in the prices ; August also recorded advances, Bundis moving upto Rs. 34-2, India Cements to Rs. 428-10 and Shahabads upto Rs. 356-4. It may said that prices reached record levels during October, Bundis quoting Rs. 35-8 on the 5th, and India Cements changing hands at Rs. 480. But at the end of October and during the beginning of November prices began to show a decline owing to the holders trying to square off their commitments before Diwali. Bundis were dealt at Rs. 31-14 on the 5th November and India Cements as low as Rs. 321-4. But December saw Cements with a healthy tone and with a large turnover of business. Bundi rose to Rs. 34 and India Cements to Rs. 370-10 on the 14th. Towards the close ,the Cements continued to be firm the closing quotations of Bundi and India Cement being Rs. 34-12 and Rs. 365 respectively.

Prices of the Important Govt. Scrips at the beginning of each month.

DIARY OF EVENTS IN 1934

ARGENTINA

Jan. 19 — Buenos Ayres: Argentine adopts sterling as basis for foreign exchange purchases.

Sept. 11 — Buenos Ayres: Big Argentine conversion involving over £6,500,000 in London. £4,500,000 issue of 4½ per cent. conversion loan arranged.

AUSTRALIA

Jan. 7 — Issue in London of £16,647,0000 3¾% stock converting 5-5½% New South Wales Loan.

June 7 — 3¼ per cent internal loan of £12 million over-subscribed.

Nov. 8 — Australian conversion of £14,601,806 of nine State Loans 3¼ per cent. at 99.

AUSTRIA

Jan. 15 — Standstill Agreement with foreign banks provisionally extended.

April 30 — New Constitution promulgated.

June 27 — Bank discount rate reduced from 5 to 4½ per cent.

July 1 — Corporative Constitution. (Bundesstaast Osterreich)

July 23 — Assassination of Chancellor Dolfuss.

Nov. 20 — International Wheat Conference opens.

BELGIUM

April 26 — Bank rate lowered from 3½% to 3%

June 12 — Belgium, Czechoslovakia, France, Latvia, Roumania notify United States inability to pay war debt instalment due June 15.

July 13 — Belgium, France, Luxemburg Commercial Treaty signed.

Aug. 27 — Belgium bank rate reduced from 3 to 2½ per cent.

Oct. 19 — Brussels: Meeting of gold bloc conference. Agreement to increase exchanges for trade by 10 per cent.

Nov. 18 — U. S. credit extends to 25,000,000 to Belgium.

BRITAIN

Jan. 12 — £105 millions of Treasury 4% bonds to be repaid on April 15.

Feb. 13 — Imposes 20 per cent. *Ad valorem* surtax on certain manufactured articles imported from France.

Feb. 14 — Formal opening of Anglo-Japanese Cotton Talks.

March 15 — International Sugar Conference holds first meeting.

April 29 — Agreement reached on Rubber regulation. International Committee to control exports.

May 6 — Rubber jumps to 7¼ per cent. Highest level for four years.

May 7 — Wheat Conference opens at London.

May 8 — New International Rubber Committee fixes export quotas bringing 30 per cent. restriction by end of the year.

May 17 — Government notifies U. S. of decision to defer payments of war debt instalments due June 15.

June 15 — Britain threatens to institute clearing arrangement against Germany.

June 27 — Anglo-French Trade Agreement signed.

June 28 — Debts Clearing Offices and Import Restriction Reprisals Bill received royal assent.

July 3 — Mr. Runciman announces willingness of Government to grant £2,000,000 defensive subsidy to tramp shipping industry.

July 4 — Anglo-German debt Accord reached. Payment of Dawes and Young Loans interest in full.

Oct. 11 — Silver prices rise to highest level since summer 1929. New record for gold at 143s. 3d.

Nov. 21 — Joint Select Committee on Indian Constitutional reforms issues report.

BULGARIA

Jan. 1 — Commercial and clearing treaties concluded with Yugo-Slavia.

Jan. 3 — Georghief Government formed.

May 19 — Sofia Bulgarian Bank rate cut to 7 per cent.

May 24 — Bank rate lowered from 8 to 7 per cent.

CANADA

May 24 — Loan issued in London: £10 million 3¼ per cent. registered stock, 1950-55 at 96½.

CHILE

Jan. 24 — Trade agreement concluded to release German credits in Chile.

CHINA

March 4 — Ratifies silver agreement with reservations.

Sept. 9 — Nanking: China imposes restrictions on foreign exchange dealings.

Oct. 15 — China imposes 10 per cent duty and equalisation charge on silver exports.

FINLAND

Feb. 13 — Signs with U. S. A. commercial treaty and friendly alliance pact.

June 15 — Pays war debt instalment.

FRANCE

Jan. 1 — Abolishes 15 per cent. Ad Valorem exchange surtax on British goods. Government reduces quotas on British goods to be introduced into France.

Jan. 4 — Credit Municipal or Bayonne fraud disclosed.

Jan. 8 — Stavisky, the Bayonne Banker shoots himself. Resignation of M. Dalimier, Colonial Minister.

Jan. 11 — Trade agreement with U. S. S. R. for one year signed.

Jan. 19 — Trade treaty of 1927 denounced by France.

Jan. 29 — M. Deladier accepts premiership.

Jan. 30 — M. Deladier forms cabinet.

Feb. 7 — Resignation of M. Deladier and his cabinet.

Feb. 8 — Bank rate raised from 2½ to 3 per cent.

Feb. 10 — Presidents of Belgian, French, Italian, Luxemburg, Netherlands and Swiss Chambers of Commerce decide to appoint Commission to develop business relations between gold countries.

March 1 — Budget passed.

March 21 — Loan of 160 million guilders in gold by Netherlands granted to French Government by syndicate of bankers in Netherlands.

March 25 Abolishes 4 per cent. and 6 per cent. import taxes on British goods.
May 7 France-India-Netherlands-Siam Agreement to regulate production on rubber signed.
May 31 Bank rate lowered from 3 to 2½ per cent.
June 27 Commercial agreement concluded with U. K.
July 27 France-Germany-United Kingdom-Italy-U. S. A. signed international tin-plate agreement.
Oct. 9 King Alexander I of Yugo-Slavia and French foreign minister M. Barthou assasinated.
Oct. 14 Reorganisation or French cabinet. M. Laval, Foreign Minister.
Nov. 8 M. Doumergue resigns Premiership. M. Flandin forms new cabinet.

GERMANY

Jan. 25 German debt talks open.
Anglo-U. S. protest lodged.
Jan. 25 Meeting of foreign creditors at Reichsbank. British and American creditors' protest against special scrip movements.
Feb. 15 Short term creditors renew 1933 Standstill agreement.
March 22 Budget estimates showing increase of about 500 million marks over 1933-34 approved.
April 26 German debt conference opens.
June 14 Central Committee of Reichsbank decides to suspend for six months all cash transfers of medium and long term debts abroad. Bank for International Settlements notified that, until further notice, no foreign exchange is available for Dawes & Young Loans.
June 14 Germany declares transfer moratorium for six months on medium and long term debts, Dawes & Young Loans included, but Standstill credits and Polish loans excluded.
July 26 German-Swiss clearing agreement signed.
Aug. 2 Death of President Von Hindenburg. Herr Hitler appoints himself President.
Aug. 19 The Plebiscite endorsing Herr Hitler's assumption of the President's office.
Nov. 4 Reichsbank withdraws 40 per cent. cash offer on coupons of long and medium term loans.

HOLLAND

Jan. 18 Agreement on main points reached at meeting of rubber production on 33⅓ per cent. quota suggested.
March 21 Dutch Banking Syndicate grants credit of fl. 100,000,000 to France.
Dec. 3 Dutch credit of fl. 100,000,000 to Belgium.

INDIA

Jan. 4 Indo-Japanese commercial agreement concluded for three years.
Jan. 5 Indo-Japanese Agreement signed by two delegates.
Jan. 14 Earthquake shocks throughout Bihar, resulting in heavy loss of life and property at Monghyr, Muzaffarpur, etc.
Feb. 16 Reserve Bank Bill passed.
Feb. 17 The Council of State passes the Reserve Bank Bill—England and Russia sign a trade agreement.
April 1 Congress decides to revive the All-India Swarajya Party and contest the elections.
April 7 Gandhi issues a statement suspending civil disobedience.
April 19 Assembly passes Sugar Excise Duty Bill.
April 22 Assembly adjourns *sine die*.
May 20 A. I. C. C. suspends civil disobedience.
May 23 Lord Erskine appointed Governor of Madras.
June 6 The Government of India issue a communique lifting the ban on Congress organisations throughout India.
July 8 Industries Conference at Simla.
July 13 Indo-Japanese Commercial treaty has been signed in London.
Aug. 8 Indian Navy Discipline Bill in the Assembly.
Aug. 18 Lord Willingdon resumes office again as Viceroy.
Aug. 21 Mettur dam declared open by H. E. Sir George Stanley.
Aug. 25 Indian Assembly pass the Iron and Steel Duties Bill.
Aug. 29 The Assembly passed the Navy Bill.
Aug. 31 Assembly is adjourned.
Sept. 18 Sir Osborne Smith is appointed the first Governor of the Reserve Bank of India.
Oct. 2 Dr. Meek is appointed High Commissioner for India in London.
Oct. 3 Gandhiji's sixty-sixth birthday.
Oct. 26 The Indian National Congress meets in Bombay under the Presidency of Rajendra Prasad.
Oct. 31 Gandhiji issues a statement re: changes in the Constitution of the Congress.
Nov. 10 Candidate elections for the Assembly is held throughout India.
Nov. 15 H. E. Lord Erskine assumes office as Governor of Madras.
Dec. 6 Sir Harry Haig assumes office of Governor of United Provinces, India.

ITALY

Jan. 17 Decree imposes embargo on wide range of French exports.
June 25 Agreement reached with Poland to exchange Polish coal for Italian motor car parts.
Feb. 3 Issues loan for conversion of two kinds of public debts from 5 to 3½ per cent.
July 6 Decrees promulgated constituting third and last group of industrial and professional corporations.
Nov. 25 Italian Bank rate raised from 3 to 4 per cent.
Dec. 3 Saar agreement reached between Germany and France.
Dec. 9 Italy mobilises foreign balances.

JAPAN

March 16 Denounces convention on abolition of import and export prohibitions.
March 24 President signs Bill granting independence to Phillipines after probationary period.

PALESTINE

May 11 Loan of £2 million guaranteed by British Government.

ROUMANIA

Feb. 6 Arranges to pay 50 per cent. on external debt coupon payable February 1.
July 26 Foreign trade agreement reached.

SAAR

June 4 Date of plebiscite fixed by League of Nations Council for January 13, 1935.
July 2 Plebiscite period begins.

SOUTH AFRICA

July 1 New gold law came into force.
April 9 Union Bank of South Africa formed.

SOUTH AMERICA

Jan. 6 Bolivia—Paraguay: After six months' armistice, war breaks out again.

SWITZERLAND

Feb. 17 75 millions subscribed to 4 per cent. loan for 100 millions for federal railways; 58 per cent. subscribed to loan for 50 millions for town of Zunich.

Sept. 19 Soviet Russia joins League of Nations.

UNITED STATES OF AMERICA

Jan. 7 President Roosevelt presents his budget.

Jan. 15 Washington: Roosevelt proposes upper limit of 60 cents for dollar, to impound Federal Reserve stocks and to create $2,000,000,000 Exchange Fund.

Jan. 28 U. S. Senate passed Gold Reserve Bill.

Jan. 31 President Roosevelt revalues dollar at 59.06 cents and raises gold price to $35 per ounce.

Jan. 31 Gold Reserve Bill signed.

Feb. 1 New York Bank rate reduced to 1½ per cent.

Feb. 4 Roosevelt takes $2,805,512,000 profit on revaluation of gold stocks.

Feb. 12 Creation of Export and Import Bank at Washington.

Feb. 14 Issue of 800 million dollar Treasury Bonds over subscribed four times.

March 9 Export and Import Bank created to finance silver purchases by Cuba.

April 13 Money market closed to securities of foreign nations in default of obligation to United States Government.

May 13 Roosevelt in budget message asks congress to grant him a further $1,322,000,000.

May 22 President Roosevelt proposes important silver legislation. Silver eligible for 25 per cent. of metallic reserves.

June 6 Roosevelt signs Stock Exchange Control Bill.

June 9 President Roosevelt issues order for nationalisation of silver.

June 12 President signs Reciprocal Tariff Bill.

May 22 President Roosevelt sends message to congress regarding silver.

June 19 President signs U. S. Purchase Bill.

June 20 President signs resolution authorising membership of International Labour Organisation.

June 28 Places embargo on export of silver.

Nov. 6 Sweeping victory for Roosevelt in United States election. Democratic party for the first time gains two-thirds majority.

U. S. S. R.

March 19 Grants Turkey credit of $8 million gold for purchase of machinery and spare parts.

Nov. 3 Agreement reached between Lena goldfields and Soviet Government.

YUGOSLAVIA

Feb. 9 Bank rate lowered from 7½ to 7 per cent.

May 1 Sign two-year commercial treaty with Germany.

July 16 Bank discount rate reduced from 7 to 6½ per cent.

JUTE

During the better part of the earlier half of 1934 price of jute fibre was easy though the undertone of the market was all along healthy and was much better on the whole as compared with the corresponding period of 1933. During the latter half things were definitely better partly due to the general improved conditions of the trade and partly due to the announcement made by the Government of Bengal regarding their intention of curtailing the production of the jute fibre during the year 1935. This had a salutory effect on the market and a rise of about Rs. 1/8 per md. in loose jute and about Rs. 8/- per bale in the case of pucca bales was registered.

The opening quotation of the year for Firsts was about Rs. 26/- and for the most part up to the middle of the year it ruled within narrow limits round about this level. Reports of damage to the crop due to floods in many of the jute growing districts had caused but a temporary rise in the market. The general feeling was not altogether misplaced as was later verified by the fact that the disparity in price of LR and LDR quality was much wider during the current season than what it was during the past, the difference per maund having been Re. 1 or little more as compared to annas -/8/- per md. during the previous year.

After the publication of the preliminery crop for cash on July 4, 1934, the market gradually began to decline and the low level of Rs. 24/- per bale was again touched. Soon afterwards it was made clear that the Government are bent upon curtailing the production of raw jute, although they did not propose to take any legal action in the first instance, but would depend upon voluntary curtailment for one season. So that it is effective, Government proposed to set in motion their entire machinery to pursuade the cultivator and also proposed to spend Rs. 50,000 for the upkeep of the propaganda staff. The first announcement had little effect on the market, but when it was made clear that the Government meant what they said and that though in appearance the restriction is only voluntary, actually it would be more effective than a compulsory scheme, dealers and speculators were not wanting. The price of jute began to soar till it rose from Rs. 24 per bale to Rs 34. The announcement made by the Government of Bengal towards the close of the year that they proposed to curtail the sowing by 31 per cent. of the 1934 acreage had a sustaining effect on the market and since then prices are well maintained at the high level.

Forecast.—The preliminery jute forecast was published on July 3 and the final on Sept. 6, 1934.

The cultivation of production by province:—

Final forecast of Jute Crop for 1934.

Province	Estimated Area in feres		Estimated yeld in balls of 400 lbs.	
	Last year	This year	Last year	This year
Bengal (including Cooch Behar and Tripura State) ...	2,168,700	2,186,100	7,092,100	7,216,000
Bihar & Orissa ...	192,100	165,600*	473,200†	450,000†
Assam ...	156,700*	145,300*	446,800	297,800
Total ...	2,517,500*	2,497,000*	8,012,100*	7,963,800

*Revised. †Includes Nepal.

Jute futures.—Memorials were submitted to His Excellency the Governor of Bengal regarding the abolition of jute futures market. But reviewing the recommendations and findings of the Committee formed in 1933 His Excellency was pleased to say that futures market was essential for the trade and if there were any discrepencies in the *modus operandi* the Government would be glad to secure expert advice from Liverpool or other places if necessary. A Board of Control was created and the price fixing of fortnightly settlement was based at the ready first rates ruling on Friday preceding settlement day.

JUTE MANUFACTURES

The hessian market during 1934 was quite steady and price level was, on an average per month, and in general throughout the year, fairly higher than that in 1933. Opening at Rs. 9-8-0 per 100 yards for 40" x 8 oz. in the month of January, the market displayed the seasonal weakness during the months to follow. But the weakness was only seasonal and consequently temporary. With better exports during the middle of the year and also in sympathy with the firmer raw jute market, the tendency remained buoyant. Off and on rumours, were floated by interested parties regarding the starting of new jute mills and also regarding the unsealing of a part of the closed hessian looms, but their effect on the market was only very short-lived. Towards the close of the year, general confidence in reviving trade was getting stronger, consequently Rs. 9/- level was crossed during the last quarter of the year. Towards the close this price level was very well maintained and Rs. 9/- seems to be a bottom level for the following year as Rs. 8/- was for 1934 and Rs. 7/- for 1933.

Heavy goods market was likewise fairly steady and the turnover was much better than the preceding years. Price level too was higher by Rs. 2/- to Rs. 3/- for 100 bags as compared to that of the 1932 and 1933.

Towards the close of the year, 2½ per cent. of the sealed hessian looms were opened and it had a visible increase in the output and stock. But the exports since then have been equally good and consequently it had no deterrent effect on the market. Apart from export, the general confidence and also the power of holders has appreciably increased ; and this feature alone had a very healthy effect on the market. It is significant that at the annual meeting of the Indian Jute Mills' Association, Mr. H. H. Burns, the Chairman, expressed the hope that it would be possible to effect an additional release of sealed looms in 1935.

This hope rests on the fact that during 1934. shipments to most markets were well maintained and prices moved within comparatively narrow limits. Shippers, were able to trade on sounder and less speculative lines than when price movements were wider.

The outlook is, indeed, brighter than at any time during the last four, five years. Overseas markets continued to be cautious ; but with the possible exception of Australia they have presented a cheerful and optimistic outlook.

The United States of America continues to be the largest buyer of hessian and during the year under review the total of 59.1 crores of yards was shipped by

Calcutta to that country, as against 61.7 crores of yards in 1933, and the total of North American shipments (including Canada) for 1934 was 67.14 crores of yards as compared with 70 crores of yards for 1933. The stocks of hessians in the United States of America are small—in fact at the end of 1934 the total of the spot and afloat goods was lower than at the end of any year since records have been available. But the consumption figures for the year have been somewhat disappointing, being 51.3 crores as against 53 crores in 1933. These figures both as regards stocks and consumption do not include the West Coast of North America, for which no figures are available.

Thanks to the relaxation of exchange control in that country, shipments to the Argentine, were better in 1934—with 21.1 crores of yards—than in 1933—with 19.1 crores of yards. Shipments to the River Plate (including bags) during 1934 amounted to 130,000 bales as against 125,000 bales for 1933 and 135,000 bales for 1932.

Perhaps the most heartening feature of the present position is that at the end of December last the combined stocks of hessians in Calcutta and the United States of America (including afloat goods) were lower, with the exception of the previous two months, than at any other time since these statistics were published ; which shows that the jute industry's decision to unseal 2½ per cent. of the looms as from November 1 last was well timed, as also the unsealing on May 1, 1935.

As for heavy goods, the outstanding feature was the poor demand for cornsacks from Australia. This was compensated to some extent by better demand for heavy goods from other markets, mostly from Burma, South Africa and the Far East.

The total shipments to Australia of all qualities in 1934 were only 247,000 bales as against 325,000 bales in 1933 and 379,000 bales in 1932. The fall in shipments by the September steamers was most marked, shipments totalling only 40,000 bales as against 117,000 bales for September, 1933.

In spite of the drop in Australian shipments the total heavy goods exported during 1934 exceeded the total of 1933. In addition to the increase which shows up in the export figures, the country consumption of Calcutta mills' goods also continues to increase.

Shipments to Cuba, however, continue to be disappointing, and show only 1.54 crores of bags as against 2.64 crores in 1930. The proposal of Cuba to start a jute mill industry of her own may not inappropriately be referred to in this context.

It will be seen from the above review that, generally speaking, overseas markets for the jute industry are continuing on a fairly healthy basis ; and it must be remembered at the same time that unfavourable factors such as quotas and import restrictions still persist, especially in the case of Germany, where they have been enhanced.

There is, however, the question of overseas competition. And in this context it is noteworthy that the exports of jute cloth from the United Kingdom to all countries for the 11 months ended November, 1934, amounted in round figures to 95½ million square yards as against 97½ million and 72½ million square yards in 1932 and 1933 respectively.

As for Continental exports of Hessian to the United States of America, we find that the export figures for 1934 amounted to 6,28,00,000 as against 5,88,00,000 in 1933.

It is understood, however, that the Continent does not compete with Calcutta in the more standard widths and weights, but Czechoslovakia has latterly made some headway both in the 36 inches and 40 inches goods owing to the fact that Czechoslovakia is now making a cloth which is generally accepted as better than the usual fair Calcutta average.

On this question of Continental competition the opinion of the Chairman of the Indian Jute Mills' Association is worth of note:

> The importations of Continental Hessian in the Argentine have not increased very much. The position with regard to Continental competition both as regards North America and the Argentine is the same unless Calcutta makes a closer study of what buyers need and endeavours to cater for their requirements more than hitherto Continental competition will increase.

COTTON

The year 1934 has proved a better year for cotton and prices have been on the upward trend throughout the period. Indian cotton rose mainly in sympathy with American cotton prices which were at a high level owing to the pursuance of the restriction scheme. Demand for cotton increased during the year owing to the increased local mill consumption and the re-opening of the Japanese market as a result of the Indo-Japanese Trade Agreement and also owing to the parity being in favour of the Indian product. Mention should also be made of the fact that Great Britain was inclined to consider the claims of Indian Cotton thanks to the Mody-Lees Pact.

At the opening of the year the quotations for Broach Cotton were in the vicinity of Rs. 190 ; and there was increase in price in February, the highest quotation being Rs. 219-8-0. As the period of delivery drew near, prices fell ; but after May prices resumed the upward trend and touched Rs. 237-12-0. The highest rate for December was Rs. 241-12-0. One of the influential causes that stimulated the active purchase of Indian raw Cotton in 1934 is the fact that the American cotton crop is expected to rule higher in consequence of the Bankhead Bill which provides for U. S. Cotton control. There has been a lot of speculation in regard to the Oomra crop, and a heavy shortage was anticipated. Accordingly the price of Oomra shot up. The highest rate for January was the lowest prevailing in December and the highest rate for December 1934 was well nigh over 20 points over that of the highest in January. Reports of arrivals are discouraging and under the circumstances, the basis for seed cotton in the Oomra markets could not but remain firm and this increase is likely to be maintained so long as the receipts continue to be slow and small.

The New Year Cotton Exchange Service has issued its revised estimate of world cotton production for the season 1934-35 on the basis of the latest data. It stands as under.

Season.			B/s.
1934-35	...	...	22,591,000
1933-34	...	...	25,327,000
1932-33	...	...	23,585,000
1931-32	...	...	26,535,000
1930-31	...	...	25,190,000

All-India Mill consumption during December 1934 amounted to 249,000 bales which, for a single month, has beaten all previous records. It compares with 228,000 consumed during December 1933. Since September 1 to December 31, 1934 the total consumption of Indian Cotton by Indian Mills has been 157,000 bales ahead of last year at 920,000 bales. This increase in consumption is accounted for by the fact that almost all the Bombay mills are working double shift. This activity at first sight may not be justified by business outlook but it has not had any bearish effect on the market.

Receipt of Indian Cotton at the main ports during the season ending December 29, 1934, amounted to 848,575 bales against 759,628 bales for the same period during 1933, while the exports of this period announced to 656,787 bales against 428,729 bales in 1933. Stocks in Bombay at the end of 1934 were 486,063 bales against 657,355 bales at the end of 1933.

The final All-India Crop Cotton forecast for 1933-34 was released on February 23, 1934. Total acreage under cotton has been estimated at 23,561,000 acres showing a rise of 6 per cent. over the estimate of the previous year. The total yield was estimated at 4,633,000 bales of 400 lbs. each, showing a rise of 4 per cent. over the February estimate of the previous year.

The first cotton forecast was published on August 30, 1934. The area sown was estimated at 12,985,000 acres with 13,999,000 acres at the corresponding time of last year or a decrease of 7 per cent. The decrease is attributed to decline in area in the Hyderabad State owing to unfavourable cultivation at sowing time.

The second cotton forecast was published on October 25, 1934. The area sown was estimated at 20,365,000 which was an increase of 3 per cent. as compared with corresponding forecast revised last year.

The Third All-India Cotton Forecast for 1934-33 was published on December 27, 1934 and the area of cotton sown was 22,600,000 acres or decrease of 2 per cent. on last year's corresponding figure revised. The estimated yield of cotton in bales of 400 lbs. net is 4,555,000 bales, a decrease of 2 per cent. on last year's corresponding figure (revised).

PIECEGOODS

Trade in piecegoods was generally much better in 1935 as compared to the previous yar. The rise in commodity prices had a healthy effect on the market and clearanee of old stocks was a very encouraging feature towards the close of the year. Winter months were particularly brisk and Pooja and Christmas sales, both from the point of the retailer as well as the wholesaler, were such as were not witnessed for the past few years. Sales of shawls and winter clothing were exceptionally good ; and the stocks that were lying on hand for past two or three years were cleared off during the year. Prices were not at all unsatisfactory, the quotations in general being higher than those ruling during the previous year. Enquiry in yarns was also good and the turnover on the whole was much better, there being a special demand for dyed and twisted yarn.

CONDITIONS IN 1934

A general review of the piece-goods trade in India in 1934 has to begin with the conclusion of the Indo-Japanese Trade Agreement. The terms of the treaty, which was concluded on 8th January, 1934, covered the following ground:—

(*a*) Most favoured nation treatment.

(*b*) Negotiations concerning modification of customs tariff.

(*c*) Measures to control effects of exchange fluctuations.

(*d*) Customs duties in Japanese cotton piece-goods into India, the quota being:—

Plain greys	...	45 per cent.
Bordered greys	...	13 ,,
Bleached	...	8 ,,
Coloured and others	...	34 ,,

Consequent to the treaty the import duty of 75 per cent. *ad valorem* or $6\frac{3}{4}$ annas per lb. on plain grey goods was reduced to 50 per cent. or $5\frac{1}{4}$ annas per lb. and on other piece cotton goods from 75 per cent. to 50 per cent. *ad valorem*. The original trade feeling that in terms of the treaty Japan would control the Indian Market has been strengthened after a year's experience. The safeguarding of the Indian Cotton grower has brought no corresponding security to piece goods dealers.

The earthquake in the middle of January devastated large areas which consumed a larger quantity of piecegoods aggravated the prevailing low prices for agricultural products and as the economic pressure had not materially weakened, the position of piece-goods was reflected in the nervousness of the trade during the year. The following comparative statements show imports into the three principal ports during the three last years:—

	1934 (pieces)	1933 (pieces)	1932 (pieces)
Calcutta ...	18,580,587	24,360,550	19,747,290
Bombay ...	5,906,615	6,189,980	5,951,240
Karachi ...	9,208,677	9,791,040	12,707,960

A feature which developed last year into a problem was the importation of piece-goods into the Kathiawar States and smuggling into British India past the Vizianagaram customs cordon. Japan's total exports to India during the second half of the year, though progressively larger than the earlier half, were below the corresponding figures of 1933, while Great Britain's contribution rose by 7,654 packages.

Japan absorbed practically the whole of India's hosiery requirements. In 1933, total imports of hosiery were 32,194 packages of which 31,278 came from Japan and 709 from China. Between January-September, 1934, Japan accounts for 19,773 packages out of a total of 20,057 packages and China's share fell to 97 packages. The statistical position in regard to cotton yarns is given below.

		Britain Grey	Britain Dyed	Japan Grey	Japan Dyed	China Grey	China Dyed
1934 (Jan.-Sept.)	...	6,783	489	5,243	7	10,649	,,
1933	...	10,748	762	7,790	355	24,491	,,
1932	...	8,335	702	10,052	...	20,962	,,
1929	...	9,328	3,100	3,467	8	13,562	,,

Indian Mills suffered from a succession of strikes during the year and their total turn-over in Bengal amounted to 47,661 bales for January-September compared with 50,959 bales during the corresponding period in the year previous. A general slackening of demand for finer counts re-acted adversely in British yarns.

The frame-work of the recent Anglo-Indian Trade Treaty was designed in 1933 when the Mody-Lees Agreement was reached, and it was understood by both parties that the 25 per cent. surcharge on import duty, which was an emergency revenue surcharge, would be removed as soon as practicable, the *quid pro quo* being that Lancashire Mills would use more Indian cotton. Imports of Indian cotton into the United Kingdom were:—

1931-32	...	137,135 bales.
1932-33	...	229,740 ,,
1933-34	...	361,546 ,,

Imports during 1934-35 are estimated to touch half a million bales.

Reviewing the position, it may be said that trade was not brisk at any period during the year, while floods and earthquake were additional grave disabilities, both to the producer and the consumer. Indian Mills were, on the whole, the main support of the market. At the end of the year stocks were not unduly high. The visible slow world-wide emergence from depression would seem to indicate that the Indian piece-goods trade has turned the corner. It is too early to make any forecast of the outcome of the Anglo-Indian Treaty, the principal plank of which is the cotton trade.

WHEAT

The world wheat market was uninteresting during 1934, except for a bright patch during the second quarter of the year. Excessive stocks imparted a bearish tone to the market and prices were rather low. Argentine was mainly responsible for the depression in prices as she was willing to sell almost at any price. There was no failure in her crop and the very fact that a good crop was expected had a depressing effect on the market.

The Argentine Government guarantees an internal price and fixs the selling rates for shipment overseas. It buys the bills for exchange representing wheat exports and resells those bills on their proceeds, so importers get substantial profit in terms of the local currency. Out of this profit the government reimburses itself to any shortage due to paying farmers the price guaranteed for wheat delivered.

The Wheat Advisory Committee held a conference in London on January 30 but was unable to formulate practical methods of overcoming the present difficulty of excessive supplies, restricted markets and unprofitable price. On May 7 many suggestions for price improvement were discussed. All were ruled out, excepting the possibility of establishing a minimum price from all exporting countries. It was thought that the suggestion was impracticable and that any suggested price would tend to increase the difficulty of the position. The opinion was widely held in the grain trade that the solution of the problem is in the direction of reducing the acreage in the various exporting countries and lowering the prices in those countries where they were maintained at a high artificial level thus assisting in a larger consumption of wheat. Australia has made progress in this direction and farmers are reverting to their prewar method of rotation of crops and also mixed farming. In 1930-31 the Australian was estimated at 18,160,000 whereas in the last season it might not be more than 13,000,000 acres.

Interest in the wheat market strengthened in May as a result of continued unfavourable weather in spring States or U.S.A. and in Canada also. Under average yield conditions the spring wheat states were expected to produce about 240 million bushels in 1934. But the continuance of the drought even during August raised the damage far above expectations that were held earlier in the season. The August 1 Government Report revealed a decline of nearly 11 per cent. in crop prospects during July, the crop yields being the lowest in forty years, pasture and range. Conditions were much the worse on record and a greater land area and more farmers were involved than in any drought ever before known. The average price on the farm on August 15 according to the Department of Agriculture was 20.8 per cent. above 1933 and the highest since April, 1931.

The shortage in crop falls short of the domestic consumption in U.S.A. and therefore she would have to draw upon reserves. Provided crop estimates were correct the heavy carry forward which had been so great a problem in that country would be reduced to old time levels.

But following a period of excitement and rising prices on the world's wheat markets the quiet conditions of the earlier months were again in evidence. The year closed quiet and dull. The opening quotation for the year 1934 in Calcutta for the readies was Rs. 2-13-6 for May Beta. The closing quotations were 3-5-0 for the readies and 3-7-9 for May Beta.

The Final General memorandum of the wheat crop for 1933-34 was published on August 15, 1934 and the total area sown was 36,062,000 acres as against 32,970,000 acres the previous year or an increase of 9 per cent. The total yield of the crop which had already been harvested was estimated at 9,358,000 tons as compared with 9,449,000 tons the previous year or a decrease of 1 per cent.

The detailed figures are as follows :—

	Area		Yield	
	1933-34 1,000 acres.	1932-33 1,000 acres.	1933-34 1,000 tons.	1932-33 1,000 tons.

(a) Including Indian States.

It will be seen that the estimates of yield of 1933-34 as compared with the final figures of 1933 show a decrease in all the important wheat-growing areas except in the Central Provinces and Berar, Bombay, North-West Frontier Province and Central India. The yield per acre in the season is 581 lbs. as compared with 642 lbs. last season.

In addition to the area, for which particulars are given above, the crop is grown in certain other tracts ; and the average area under wheat in those tracts for the last five years has been estimated at about 559,000 acres with a yield of 145,000 tons.

The bulletin published by the International Institute of Agriculture, Rome, gives the following information relating to the area under wheat in certain European countries in 1934, as compared with 1933.

Countries		1934 (acres)	1933 (acres)
France†	...	13,202,000	13,321,000
Italy	...	12,151,000	12,665,000
Spain	...	11,101,000	11,047,000
Rumania*	...	6,178,000	7,109,000

Bulgaria	...	3,034,000	3,051,000

*Refers to winter crop.
†Soverigns up to May 1.

RICE

Rice had a dull market throughout the year 1934. Prices were sticky at low levels. There was an abundance of stock owing to the fall in exports and the market was glutted owing to the imports of rice from abroad. The imports were heavy ; and it particularly affected the South Indian market. Siamese and Japanese rice was imported in large quantities under the plea that it was only broken rice and it was not therefore competing with the local rice. The cultivators applied to the Madras Government for protection and it agreed to take up the proposal. A special officer was appointed to investigate into the matter. Some reduction in the railway freight was granted to the Tanjore rice growers.

According to the final general memorandum on the rice crop of 1933-34 the total area reported was 81,977,000 acres as compared with 82,661,000 acres in the previous year. The total yield was estimated at 30,353,000 tons of cleared rice as against 31,089,000 tons in 1932-33. The decrease was 1 per cent. in area and 2 per cent. in yield.

The average yield per acre works out to 829 lbs. as against 843 lbs. in 1932-33 and 876 lbs. in 1931-32.

The first rice forecast for 1934-35 was published on October 25, 1934, and the total area sown was reported to be 75,261,000 acres as against 75,080,000 the corresponding estimate (revised) of last year, or an increase of 181,000 acres.

The second rice forecast for 1934-35 which is given under was published on December 27 and the total area reported was 78,486,000 against 79,762,000 (revised) in the corresponding period of the year previous or a decrease of 2 per cent.

SUGAR

1934 has, on the whole, been a year of declining prices in the sugar market. There was a considerable increase in supplies on account of internal production and imports were on the increase in the latter half of the year. As a result of this, prices were more or less consistently on the downward trend. The increase in the imports from Java is surprising, in view of the expansion that has taken place during the last three years in the indigenous sugar industry. As is well-known, this expansion has been retarded a great deal by the imposition of the excise duty on sugar, which was meant to compensate the Government for the loss of revenue from the import duty consequent on the reduction in imports. Though the excise duty has discouraged the establishment of new mills, it cannot retard the expansion of existing mills, when it has been projected from the very start, so that the imposition of the excise duty cannot be expected to bring about a reduction in the production of sugar in the Indian mills. But the difficulties of the Indian sugar industry result not so much from excess of total supplies over demand, as from the fact that the excess production of areas like the U. P. and Behar has not been dealt with by the industry in a scientific manner. If care were taken to dispose of the surplus production of these areas in those parts of the country which are served by the ports, prices would certainly have ruled at higher levels, at least in the early part of the year.

As it was, the surplus production of these areas exerted that full pressure on prices all over the country. While formerly the price of sugar in upcountry areas was equivalent to the price of the imported commodity plus the freight from the ports to upcountry stations, latterly the Indian sugar mills lost the freight advantage. This position is due entirely to the fact that the production of the upcountry areas like U. P. and Behar was more than the local demand. In the month of August a Conference of sugar manufacturers was held at Calcutta to consider the question of a marketting organisation for Indian sugar. The principal idea was that, as a start, provision should be made for disposing of 30 per cent. of the production of the U. P. and Behar, which is estimated to be the surplus in those areas served by the ports, at prices which would compare favourably with the price of the imported product. The general sense of that Conference was that a beginning should be made and that the ultimate aim should be to form a complete marketing organisation. But no such organisation was formed up to the end of the year under review. But it is believed that progress has been made in the settlement of outstanding issues and that it will not be long before the Indian sugar industry will succeed in instituting a scientific system of marketing.

The need for such a marketing organisation has been brought out even more clearly since the time the sugar manufacturers met at the Conference in Calcutta. One of the purposes of that Conference was gradually to be able to shut out the imports altogether, for, the statistical position, as it has been estimated by the Sugar Technologist, showed that in another three years India will be producing as much as her requirements and that there might even be a surplus left over for export. In consideration of such a position the sugar industry ought to be able to compete more effectively with foreign imports. But such competition has become increasingly difficult, owing to the fact that Java has still her 1932 harvest on hand and during the latter part of the year imports from Java showed a definite tendency to increase. The following table gives an estimate of the output of Indian sugar.

Year	Factory Sugar (Tons).	Khandsari Sugar (Tons).	Total (Tons).
1931-32	2,28,000	2,50,000	4,78,000
1932-33	5,54,000	2,25,000	7,79,000
*1933-34	5,34,000	2,25,000	7,59,000
1934-35 (Estimated) ...	6,87,000	2,00,000	8,87,000
1935-36 (Estimated) ...	8,07,000	2,00,000	10,07,000

*Reduction due to Earth quake.

The result of the increase in production has naturally been to press prices further down. The depression has been accentuated not only by the factors present in India which have been referred to already, but also perhaps by the definite efforts which Java made to dispose of her surplus. The following table gives the highest and lowest prices of Java and Indian sugar for each month of the year under review.

The stocks of foreign sugar in the main Indian ports towards the close of the years 1932, 1933 and 1934 were estimated as follows:—

	(In tons)		
Calcutta ...	1,540	1,338	27,500
Bombay ...	5,850	4,500	35,000

SHELLAC

The shellac market experienced better conditions during most part of the year 1934 than in 1933. The opening market quotation for T. N. Shellac was Rs. 37 per maund which was the lowest for the month of January. Prices gradually improved but by the end of Spring prices declined. It was only temporary and prices began to soar again and very good prices obtained in May, June and July. The rise in prices was for a time thought thoroughly unjustified and unexpected. And prices have been on the decline ever since. The shellac market closed uneventfully at the end of the year. Conditions in the London Market were the same as in the Indian Market.

The exports of shellac for the 12 months ending December 1934 were 724,479 cwts. against 564,423 cwts. of the corresponding period of last year. The figures for the first three months of 1934 were 261,797 cwts. against 95,232 cwts, during the corresponding period of 1933. There has been a decline in exports during the last quarter of the year. Shipments from Calcutta up to December 17th, 1934 amounted to 14,086 chests.

LINSEED

The linseed market also shared the general rise in commodity prices ; and though it started the year with a lower price than the year previous, the improvement in the subsequent months was much higher. The highest price of the year was Rs. 5-8-3 per maund and that was in June which is usually the period of high prices against Rs. 5-3-3 of the year previous. Towards the end, there was a decline in prices but closed better than 1933.

The export of linseed for the 12 months ending December, 1934 was 275,705 was against 380,340 during the corresponding period in 1933. The exports have fallen ; but still they are very much higher than those of 1932.

The Final General memorandum on the Winter Oilseeds for 1933-34 gives the total area under linseed as 3,257,000 acres as against 3,299,000 the previous year. The total yield was estimated at 3,77,000 tons as against 4,06,000 tons the previous year which is a 8 per cent. decrease over the previous year's figures.

The South American crop of linseed for the current year was very satisfactory and therefore there was considerable weakness in the Indian market during the middle of the year. Towards the close, however, due to damage in winter crops in India the market was steady and the prices on the whole were well maintained.

COAL

The market during the year 1934 ruled dull and conditions were not easy, prices being quoted at lower levels than 1933. The coal mining associations applied to the Government of India for the adoption of a restriction scheme and there was considerable speculation for some time regarding the attitude of the Government but in the end the Government refused. There was some activity again due to the rumour that there was going to be a reduction in the surcharge on rail freights.

The following table gives the prices of two typical grades of Indian coal.

1934.	Jherria No. 1. Rs. A. P.	Deshergur. Rs. A. P.
January	2 12 0	3 14 0
February	3 0 0	3 14 0
March	3 0 0	3 14 0
April	3 0 0	3 14 0
May	2 14 0	3 14 0
June	2 14 0	3 16 0
July	2 12 0	3 14 0
August	2 12 0	3 14 0
September	2 12 0	3 10 0
October	2 12 0	3 10 0

Railways were throughout in excess over 1933. The raisings on coal during the first ten months ending October, 1934 were 11,658,000 tons against 8,578,000 tons during the corresponding period of the previous year.

The imports of coal in India during the nine months April to December, 1934, decreased owing to less demand from the Railways and Bombay mills. The following table will be useful for giving the information.

IMPORTS OF COAL FOR NINE MONTHS APRIL 1 TO DECEMBER, 1934

Bengal ...	689	472	1,666
Bombay ...	11,067	11,452	12,764
Sind ...	6,352	12,053	19,193
Madras ...	3,044	4,582	1,749
Burma ...	13,038	25,483	14,689
Total ...	34,190	54,042	50,061

The exports of coal from India for the same period decreased and the figures were 259,292 tons against 302,780 tons.

For the period from April 1 to October 27, 1934, the total wagons loaded both on the broad gauge and metre or Class 1 railways rose by 243,000 wagons to 3,678,000 wagons as compared with the corresponding period of 1933.

The traffic in coal and coke for the same period was 568,000 wagons broad and metre gauge in Class 1 railways, as against 51,000 wagons against 58,000 wagons or 11 per cent.

BULLION

GOLD

The gold market and the price of gold were necessarily subject to the uncertainties of the monetary and exchange policies of the principal financial centres of the world. So far as such uncertainties are concerned, 1934 did not mark any appreciable improvement on the conditions of 1933. In one respect, however, there was a significant difference in that before the end of January, President Roosevelt had decided on the question of the revaluation of the dollar. But in as much as he reserved for himself the right to effect a further devaluation to the limit of 50 cents, he gave scope for the frequent recurrence of the rumour that he intended to exercise such reserve power. Moreover, the return of America to the gold standard did not eliminate the uncertainty of international finance. So far as the gold bloc countries were concerned, their difficulties during the year under review were, if anything, greater than in 1933 ; though, during that year the break-up of the World Economic Conference caused a slump in confidence and a flight of funds from the gold standard countries. The gold bloc countries had experienced during the year 1934 a strong movement for devaluation. Although the governments were not obliged to give in in any way to such movements, there was sufficient pressure to cause a loss of confidence from time to time ; and political troubles which occurred now and again caused such serious fluctuations in the principal exchanges that the price of gold and the demand for gold in an international centre like London were seriously affected.

The history of the gold market during 1934 will, therefore, have to be largely a history of the international exchanges during the year. Apart from the fluctuations in the London price of gold, and the fluctuations that have been caused in sympathy in the local Indian markets, one noteworthy point is that the tendency of foreigners to hold their savings in the form of gold in London was, if anything, strengthened during the year under review. There was thus a constant demand for gold in London which not only sustained, but even increased appreciably from time to time, the premium on the sterling-franc exchange which appeared even during the year 1933. Throughout the year under review, London was a refuge for nervous foreign funds and as part of these funds was held in the form of gold, the premium on gold never altogether disappeared. And during the moments of extreme nervousness as regards foreign currencies, the premium rose to very high levels.

As the opening month of the year saw a period of weakness in sterling in terms of the franc, the gold market was firm with an upward trend of prices. On January 31, President Roosevelt announced his decision to fix the value of the dollar at 35$ per ounce of gold and the result was an increase in the London price of gold from 132s. 1d., to 139s. 6d. The stimulating effect of the revaluation of the dollar continued up to the middle of February ; and the gold market was steady. Prices in Bombay tended to remain either near or above the export parities. Following the movements in New York-London cross rate, the London market declined from 137s. 5d., to 134s. 9d., but closed at the end of the month at 137s. 10d. During the month of March the sterling-dollar rate was comparatively steady and the fluctuations in the sterling price of gold were, therefore, within very narrow limits. The rise in the cross rate to 5.18¼ in the opening week of April brought about a setback in the price of gold. But the end of the month saw a revival of the rumour that the United States were contemplating a further devaluation of the dollar to the statutory limit of 50 cents and this induced covering by bear operators which put up the Bombay price of gold. The quotation in London reigned between 135s. 7d., and 135s. 11d., during this period. In the months following, the relation between the exchanges and the price of gold was brought out more clearly. The first week of May saw an advance in the price consequent on a decline in the London-New York cross rate, from 5.15 to 5.10⅞ ; a further decline in May brought about a higher level of prices and the price of gold touched its highest for May at 137s. ½d. by the end of the month. In fact, the trend of prices during the middle of the year may be said to have been consistently higher. The months of February and March experienced a setback owing to the rise in sterling consequent on the seasonal strength of the British currency during that part of the year. Likewise, the Autumn sees a rise in the gold price consequent on the seasonal depression. In June the rumours regarding the increase in the American mint price of gold were again current in the markets with the natural consequences. In the Indian market the third week of October is notable for the setback in the rates consequent on a report that the Government of India and the Secretary of State had been in correspondence on the subject of an export duty on gold.

The climax was reached in the middle of October when the London price of gold touched the high level of 143s. 3d. The upward trend would very probably have continued to the end of the year, but for the setback caused in international finance by the assassination of the French Foreign Minister and the King of Yugoslavia at Marseilles in the second week of October. The assassination of the King led to the belief that a war was imminent on the Continent and that, therefore, the European currencies were unstable. This caused a flight of funds to London and a consequent increase in the exchange value of sterling. The result was that the price of gold had a setback. But conditions improved again in December when the re-assertion of the seasonal factors brought about a decline in sterling.

The following tables give the highest and lowest prices of gold in London and Bombay and also the imports, exports and offtake and stocks of gold in India :

SILVER

From the standpoint of silver, the year under review may be said to fall into well-marked divisions coinciding with the four quarters of the year. In the first quarter, the major factor was the intention of the Government of India in regard to the improved duty on silver ; and rates fluctuated according as the market believed in the rumours either way. But it was generally a period of firm prices ; and the only effect of the uncertainty about the import duty was that the ready rate, which stood at about the level of Rs. 54/-, was about Rs. 3/4 under the rate for March settlement. Though in the middle of February, this margin between the ready rate and the rate for March settlement narrowed to about Rs. 2/8 per 100 tolas, it again widened to Rs. 4/- in the period immediately before the announcement of the Budget. It is interesting that both before and immediately after the announcement of the Budget, the market was very active and the sharp decline in rates was attributable only to profit-taking. The reduction of the import duty from 7½ annas to 5 annas an ounce, as well as firmer advices from London and New York, served to offset in part the effect of profit-taking.

Once the Budget uncertainty was removed, the centre of speculative interest shifted to the plans and policies of the United States Government. The uncertainty was prolonged by a difference of opinion between what is generally known as the Silver Bloc and President Roosevelt on the nature of the legislation which Congress would enact on this subject. The Silver Bloc was insistent that the Silver Bill should be of a detailed and mandatory character, leaving the President no manner of discretion as to the time and the extent to which he would pursue the policy outlined by the Congress. For, the Silver Bloc were afraid that the President, who was known to be far less enthusiastic in the cause of silver than themselves, would under some pretext or another postpone or minimise the purchases of silver, which, it was intended, Congress should enjoin on him ; and they sought to overcome the difficulty by restricting the President's discretion in the matter. President Roosevelt, on the other hand, contended that Congress could only lay down the outlines and objectives of a policy the execution of which must be left to the Administration. The tussle was rather prolonged and thus afforded the speculative operators in silver ample opportunity to sway the market. A compromise was ultimately made on the basis that, while Congress legislation should leave no discretion to the President in regard to the execution of the policy, it should not tie his hands as to the time and extent to which the silver purchase policy was to be put into operation.

During the months of March and April reports from America regarding the prospects of the silver legislation were generally bullish. From the second week of May, the reports were more encouraging. The market had already strengthened owing to internal factors ; and in India additional strength was derived from the prohibition of the importation of silver free of duty from certain land frontiers. It was known by the middle of April that President Roosevelt had agreed to the introduction of silver legislation and thus the price of silver rose to Rs. 54/- in the Bombay market. The trend of prices was higher throughout the months of June. And on June 20 the Silver Purchase Act, was passed by the House of Representatives ; and it was known at the same time that the United States Treasury imported about five million ounces of silver from London. During the period in which America was pursuing actively the policy of silver purchase with a view, not only to execute the policy laid down by Congress, but also to offset, as far as possible, the heavy balance of payments in America's favour and reduce the strength of the dollar, silver prices were well maintained. It should be noted here that the nationalisation of silver in the United States of America was announced in the middle of August. Another bull point in the silver market during the year under review was the success of Democrats in the general elections in America and the certainty that silver enthusiasts had mustered strong in the new Congress. The American policy might have increased the price of silver to even greater heights, but that in the third quarter of the year China was selling heavy amounts. Latterly, however, China gave up the attempt to counteract the rising trend of silver prices by means of such sales and decided on levying an import duty of 10% which was tantamount to the abandonment of the automatic silver standard. At the close of the year the local markets were again influenced by attempts to anticipate the decision of the Government of India in regard to the import duty on silver, which, in view of its low yield, had come to be regarded as practically ineffective.

The following tables give the highest and lowest prices of silver in London and Bombay and also the imports, exports and offtake and stocks of gold in India :—

NORTH BRITISH NONE BETTER

THE HOME of INSURANCE SERVICE.

North British & Mercantile
INSURANCE COMPANY LIMITED
Incorporated in Great Britain
"NORTH BRITISH BUILDING,"
101-1, Clive Street, ∴ ∴ CALCUTTA

1928-1935

In seven years, "Indian Finance" has quadrupled in bulk.

Annual subscription remains unchanged.

In 1935, as in 1928, "Indian Finance" is, in all circles, looked upon as the trusties and most authoritative guide in India in financial matters.

Supplements of "Indian Finance" do not rain, they pour.

Your subscription entitles you to free supply of over eighty supplements including the 450 page Year-Book.

Subscription:—

Rs. 27 per year inclusive of the Weekly Investor's Supplement, Monthly Trade Review, Monthly Industries Supplement, Annual Commercial Supplement, Year-Book and Special Supplements on the Central Budget, New Loan etc.

TEA

The tea market was not very active but prices were well above 1932 level owing to the restriction scheme introduced in April 1932. There was a falling tendency throughout the year and as a consequence the export quota was reduced from 87½ to 82½ per cent. of the standard of 807.7 million lbs. as from April 1, 1935.

The export of Indian Tea from Northern India during April to December has been as below :—

	Season 1934-35	Season 1933-34	Season 1932-33
U. K. ...	205,356,856	199,250,317	238,406,876
Outmarkets ...	19,174,552	26,514,765	31,485,625
Indian Ports ...	18,966,961	17,224,031	17,922,390
Total ...	243,498,369	242,989,113	287,814,891

The followng figures show the imports and re-exports from U. K. during calender years 1934, 1933 and 1932.

IMPORTS

	1934	1933	1932
Indian ...	274,157,000	279,004,000	311,964,000
Ceylon ...	156,334,000	148,167,000	172,017,000
China ...	20,870,000	8,001,000	4,850,000
Java & others ...	55,291,000	69,539,000	77,131,000
Total ...	506,652,000	504,711,000	565,962,000

The following tables shows prices realised at the auctions in London.

RE-EXPORTS

	1934	1933	1932
Indian ...	29,985,000	38,226,000	41,555,000
Ceylon ...	18,502,000	22,601,000	22,203,000
China ...	1,195,000	793,000	1,097,000
Java & others ...	17,505,000	20,429,000	13,386,000
Total ...	67,187,000	82,049,000	78,241,000

The level of prices during the last quarter of 1934 was lower than that during the corresponding period of the previous year. Special efforts were made to stimulate the great potential Russian market by export credit arrangements. The Indian Tea Cess Committee are doing great propaganda in the Indian markets as well as in the American market. The Rectriction scheme has not as yet caused any considerable increase in production by "outsiders" but exports from non-restriction countries rose from 14 per cent. of the total in the year ended March 31, 1933 to 18 per cent. in the following year and might increase further if prices were successfully raised again.

AVERAGE TEA PRICES (per lb. London Sales)

Budget Supplement

Vol. XV. No. 9 MARCH 1, 1935 Price As. 8

SIR JAMES GRIGG'S FIRST BUDGET

PRECISE, CONCISE, AND, ON THE WHOLE, WISE

WAYS AND MEANS EXCEPTIONALLY STRONG

GILTEDGE PROSPECTS ROSY

The first budget of Sir James Grigg is interesting in more ways than one.

Firstly, it confirms the impression which we all have formed of the new Finance Member. There can now be no doubt that Sir James is exactly unlike his predecessor and fully like Sir Basil Blackett. Those, who have followed the views of *Indian Finance* closely, will realise that this observation of ours is about the highest tribute which we can pay to Sir James.

Secondly, this budget gives us a clue as to the way in which the mind of Sir James is working. The short and concise speech of this year is interesting less in itself than as affording the basis for our gauging what is in store in the four and odd years of Sir James. The new Finance Member is not the one to beat about the bush. Flamboyant words and elaborate thesis are repungent to him. What he has to say, he says in the simplest and most straightforward manner. Whatever he does, it is clear-cut, precise and direct. Whether one agrees with him or not, there must be great satisfaction that one can always know where one stands with him. Precision and conciseness, ready judgment and swift action—these ought to be the outstanding features of the new regime.

Thirdly, the budget is significant as embodying not a makeshift, but an intrinsic, balancing. The actual surplus for 1933-34 was Rs. 2.72 crores—an amount which proves that the cut in the provision for debt redemption is substantially made up. The surplus in the revised estimates for 1934-35 will be Rs. 3.27 crores ; and this, added to the Rs. 3 crores provided for debt redemption, brings up the total to what the debt redemption allocation must have been on the original plan. The estimated surplus for 1935-36, on the basis of the existing taxes, is Rs. 1½ crores. It is clear, if the estimates were closely analysed, that Sir James has erred on the side of caution in arriving at a surplus of this size. It may be said that 1935-36, too, would produce a surplus substantial enough to bring up, in conjunction with the Rs. 3 crores provided for debt redemption, the total to the allocation necessary under the scheme devised by Sir Basil Blackett. Sir James attaches considerable importance to the necessity for increased provision for debt reduction as soon as conditions permit. It is, therefore, comforting to know that had he so desired, it would have been within his power to balance the budget, after providing, for sinking fund arrangement, the amount calculated on the basis of the old arrangement.

Fourthly, the budget gives relief in regard to taxes about which there was general expectation and even clamant demand that relief was imperative. At the same time, the budget has fortunately falsified the apprehensions as regards such impositions as excise on cement or excise on cotton production.

Fifthly, the ways and means position announced by Sir James Grigg is by far the biggest bullish factor for giltedge and, generally, for stock exchange and commodity markets that we have known for many a long day. The policy of cheap money, for the furtherance and emphasis of which *Indian Finance* has been agitating, and which has not received active and comprehensive support from the Government so far, is now inevitable in the kind of ways and means situation that the new financial year will present. Giltedge must record a striking advance in prices. The borrowing rate of the Government must come down to 3 per cent. for long term. Along with this, industrial concerns must be able to market their fixed interest bearing bonds at more favourable rates. There should be more demand for equity shares. With cheaper money, the commodities must register considerable rise in price.

Sixthly, the budget holds the promise of further relief to tax-payers in 1936-37 and of such changes in the taxation system of India as would make it conform to scientific canons and equitable principles.

We must now proceed to a detailed study of the three sets of accounts presented in the Indian Budget. At this time last year, Sir George Schuster expected that the revised estimates for 1933-34 would yield a surplus of Rs. 1.29 crores. The actuals show a surplus of Rs. 2.72 crores, the improvement being due to :—

> First, the fact that a somewhat unusual number of holders of Government securities failed to draw their interest ; secondly, the fact that recoveries from commercial departments were larger than expected ; thirdly, forestalling in anticipation of an increase in the salt duty; and fourthly, the fortunate non-realisation of our expectations of a reduction in receipts from Income-tax in the areas affected by the earthquake of January, 1934.

As planned by Sir George, the surplus was to be utilised for financial assistance in connection with the earthquake. Sir James now estimates the liability in this regard at Rs. 2.10 crores. The net surplus is, therefore, Rs. 62 lakhs.

Revised estimates for 1934-35 (excluding Railways) compare with budget estimates as under:—

(Lakhs)

	Budget 1934-35	Revised. 1934-35
Revenue	87,13	91,00
Expenditure ...	87,03	87,73
Surplus ...	10	3,27

The surplus is, in the main, due to Customs. At the end of March, 1935, Sir James hopes, therefore, to have in hand two surpluses, one for 1933-34 of Rs. 62 lakhs and one for 1934-35 of Rs. 3.27 crores making Rs. 3.89 crore, in all. Of this, Rs. 1 crore is to be given as grants to provinces for schemes in rural areas (including the development and strengthening of the co-operative movement); Rs. 40 lakhs will be given as a special contribution to the Road Development Fund; Rs. 25 lakhs will be set aside for schemes of development in the North West Frontier Province; Rs. 20 lakhs will be used for development of broadcasting. After making these special grants, the balance will be Rs. 2.04 crores. How this will be dealt with is thus explained by Sir James:—

> "A larger part of this sum I propose to put aside for two schemes which it was provisionally decided to finance from capital. These are the civil aviation programme, which is expected to cost Rs. 93 lakhs, and the transfer of the Pusa Institute to Delhi which will cost about Rs. 36 lakhs. I was not myself very happy about the decision to charge to capital these two schemes, which are certainly not in any strict sense of the word remunerative. And now that we have an accrued revenue surplus it seems to me sound policy to use part of it for these purposes and to avoid the creation of what might have become an awkward precedent. The remainder of the surplus amounting to Rs. 75 lakhs will now go as an additional allotment for the reduction of debt and this concludes the disposal of the sums which we expect to have in hand on the 31st March next."

Turning to the budget figures of 1935-36, the position on the basis of existing taxes is thus summarised:—

	Lakhs
Revenue	90,19
Expenditure	88,69
Surplus ...	1,50

It will thus be seen that the surplus anticipated is Rs. 1½ crores. The general anticipation in business circles was that the surplus for the coming year would be roundabout Rs. 4 crores. In this connection, we must draw attention to the fact that income under interest shows a very large reduction amounting to Rs. 1.29 crores. This is due to the transfer of the currency functions, and therefore the reserves, of the Government of India to the Reserve Bank. In the first year, instead of getting a full year's interest on the assets in the various reserves and balances, the central revenue will now get only a part of the year's dividend from the profits of the Bank. But for this reduction of Rs. 1.29 crores in receipts from income, the surplus would have been just short of Rs. 3 crores. Moreover, the estimates of receipts from customs have been, in our view, fashioned on too conservative a basis. It may well be that the revised estimate as announced this time next year would show an improvement not dissimilar to that which is now seen in the case of the revised estimate for 1934-35 as compared with the budget estimate for the same year.

How is this surplus of Rs. 1½ crores to be utilised for tax reduction? This is the next problem which Sir James tackles. The duty on silver is to be reduced to 2 annas per ounce. It is to be hoped that the lower level which is now proposed would make smuggling unprofitable and that the honest trader will come into his own.

The export duty on skins is to be abolished. Due to these changes, the surplus is reduced to Rs. 1.42 crores.

Sir James calculates that the removal of the surcharges on income tax and super tax would cost Rs. 3.34 crores in a year, while the removal of the tax on income between Rs. 1,000 and Rs. 2,000 would cost a further Rs. 75 lakhs. These two removals in entirety would, therefore, have cost Rs. 4.09 crores, while the surplus available is only Rs. 1.42 crores. Sir James announces, in the circumstances, that these two surcharges and the quasi-surcharge will all be reduced by one-third. The loss of revenue on this account would be Rs. 1.36 crores. In the result, there will be a nominal surplus of Rs. 6 lakhs.

So far as the partial removal of the surchage on income tax and super tax is concerned, there was a strong feeling in the country that simultaneously with the restoration of the cut in salaries of public servants, these surchages should be entirely wiped out. In reviewing the position on the eve of the budget, *Indian Finance* suggested that the best course under the circumstances would be to meet the popular demand half way both in regard to the two surcharges and the quasi-surcharge. In the two or three days prior to the announcement of the Budget, considerable doubts were entertained in financial circles as to the possibility of any relief in these taxes. Speculation was rife; and the general opinion was that the surcharge would be reduced by 5 percent. The actual announcement of 8⅓ per cent. is, therefore, not quite so great a disappointment as the market came to be in a condition in which it did not entertain great hopes.

There can, however, be no doubt that with the more favourable developments in current revenue-expenditure position which we anticipate, the surcharges will be completely eliminated.

At the same time, the hope is also strengthened that an endeavour will be made to initiate a comprehensive and scientific study of the Indian taxation system in the coming year. Such a study is overdue. The taxation system as we now have it in India is a thing of shreds and patches. It requires thorough overhaul. Such overhaul implies not only the investigation of the equity or otherwise of existing taxes, but of the possibilities of new and alternative sources of taxation.

We may now sum up our conclusions as regards the main budget:—

(1) The surplus disclosed is substantial and is not likely to be affected by events in the next financial year.

(2) It may well be that the surplus in 1935-36 may turn up to be bigger than is now anticipated.

(3) In any case, there are special factors which are responsible for reduced receipts. Some of these factors will not be operative in 1936-37.

(4) There is welcome relief to income-tax payers though the latter would have been happier for a bigger relief.

(5) Apprehensions as regards may new taxes have been proved groundless.

The study of the ways and means budget presents an extraordinarily strong position.

The ways and means problems, which the Government have to tackle in India and in London, should prove exceptionally comfortable. The new year will open with a substantial balance in the Home Treasury. The remittance programme for 1935-36 is estimated at £26 million. The closing balance as at March 31, 1936 is to be £500,000. We must feel relieved to learn that the Secretary of State will not maintain a larger cash balance in London than is necessary for his day-to-day transactions. It will be the responsibility of the Reserve

Bank to supply the Secretary of State with sterling from time to time according to his needs. Remittances of £26 million must be construed a bullish factor for exchange.

So far as the ways and means position in India is concerned, the most outstanding factor is that the borrowings will be considerably less than the payments which the Treasury will be making out in respect of maturing loans. The Government will repay Rs. 16 crores in respect of 6½ per cent. 1935 bonds, Rs. 11.4 crores on 5 per cent. 1935 bonds, and Rs. 9.39 crores on 6½ per cent. Bombay Development Loan. The total comes to nearly Rs. 37 crores.

The Government will also repay £11.9 million of 6 per cent. 1935-36 Indian sterling loan and £3½ million of 4 per cent. 1935-36 East Indian Railway Debenture stock. The total redemption of sterling loans will, therefore, be £15½ million or about Rs. 21 crores.

The total loan maturities in the next financial year are, therefore, Rs. 58 crores in India and in London. Against these, Sir James Grigg proposes to borrow only Rs. 25 crores.

At this point, it is necessary to clear up a misunderstanding that has arisen both in Bombay and in Calcutta owing to the somewhat unfortunate wording of the Finance Member's speech in describing these operations. His actual words are:—"Allowing for a remittance of £26 million we anticipate that we could meet all these liabilities without raising more than Rs. 25 crores by fresh borrowing". The words "fresh borrowing" have caused considerable misapprehensions. Some people have been inclined to argue that this means that the Government would require Rs. 25 crores of fresh money in addition to the converting of the various loans. An impression of this kind is altogether erroneous. Such an imprssion will be removed if we were to read this sentence in connection with the entire discussion of the ways and means proposals as developed in the budget speech.

As we have said, the total loan maturities are Rs. 58 crores. For meeting a part of these liabilities, the Finance Member will be getting the necessary amounts from the following funds or sources at his disposal:—

(a) He will get Rs. 3 crores from the debt redemption fund.

(*b*) He expects to get Rs. 8.75 crores from the increase in the Post Office Savings Bank deposits.

(*c*) Postal cash certificates are expected to yield Rs. 2.75 crores.

(*d*) Railway depreciation fund and Provident Funds will give him Rs. 5 crores.

(*e*) Surplus cash balance with the Secretary of State may give him Rs. 10 crores.

The total of all these funds comes to Rs. 29.50 crores. Thus out of the Rs. 59 crores, he will be able to find Rs. 30 crores from the various funds at his disposal and from the accruals in Postal Saving Bank Accounts and Postal Cash certificates. The balance is Rs. 28 crores. It will thus be seen that the estimate of the Finance Member that the total borrowing in 1935-36 will be only Rs. 25 crores is fully substantiated by a careful study and detailed analysis of the ways and means figures.

It may well be that of the Rs. 25 crores, anything like Rs. 15 crores or £12 million will be raised in London in the form of conversion loan in respect of the 6 per cent. 1935-36 India sterling bonds. This may leave a bare Rs. 10 crores as the new loan issue in India.

Let us understand the position clearly. The Government will be paying Rs. 37 crores to the Indian market on account of the redemption of 6 per cent. 1935 bonds, 5 per cent. 1935 bonds and 6½ per cent. Bombay Development Loan. What they will take out of the market by way of new loan is a maximum of Rs. 25 crores and a minimum of Rs. 10 crores.

It may be safely assumed that the market will receive roundabout Rs. 20 crores in excess of what it

RESERVE BANK INAUGURATION NUMBER

EARLY APRIL SUPPLEMENT OF INDIAN FINANCE

In celebration of the creation of the Reserve Bank of India, *Indian Finance* has arranged to issue, early in April, a Reserve Bank Inauguration Number, to mark the importance of the occasion, to set out the significance of the institution, and to stress its meaning to national economic well-being.

The Special Supplement will be a fitting commemoration number; more, it will be a fully educative record.

It will seek to educate the lay public on the mysteries of reserve banking, the exact place of the Reserve Bank in the national banking system and general national economy, the status and balanc-sheet-story of the member banks that will be joining the reserve banking system.

Special articles have been fixed up, of which the following deserve to be particularly mentioned:—

(1) "Empire Central Banks" by Sir Cecil Kisch.

(2) "Central Banking and World Depression" by Dr. Paul Einzig.

(3) "Future of Gold Standard" by Mr. Maurice Green, Editor of the *Financial News*, London.

(4) "My Plan for Natinoalising Central Banks" by Mr. Francis Williams, City Editor of the *Daily Herald*, London.

(5) "Recent Changes in Central Banking Technique and Practice" by Dr. Paul Einzig.

(6) "The Bank for International Settlements—its past, present and future" by Dr. Paul Einzig.

Full balance-sheet studies of each of the important banks will be furnished in the Special Number.

We have also arranged for various articles on various aspects of the Reserve Bank of India, its constitution, its working, its relation to the money market, its significance to national banking development, its coordination with Treasury authorities, etc.

Rates for advertisement are Rs. 200 per page and Rs. 125 per half page.

The price per copy of the Special Number is Rs. 3. But it will be supplied free to subscribers of *Indian Finance*.

Non-subscribers of *Indian Finance* who wish to have copies of the Reserve Bank Inauguration Number must register their orders before March 10. Such orders should be sent to:—Secretary (circulation), *Indian Finance*, Calcutta, together with a remittance at the rate of Rs. 3 per copy.

MANAGING EDITOR,
Indian Finance,
20, British Indian St.,
Calcutta.

will put out in the new loan of 1935-36. If funds for this amount are released from maturing loans, and if there si no new loan issued by the Government except for slender amounts, the market will be driven to reinvest the sum so received in one or other of the existing securities. There is, therefore, potential buying power of Rs. 20 crores in the giltedge market in the course of the next financial year. In the face of such considerable purchases in prospect, the future of giltedge must be considered exceptionally rosy.

The situation in fact is, in our view, so remarkably favourable that, if only the Finance Member has daring and vision, the dream of conversion of 3½ per cent. Rupee Paper will be translated into fact.

Another favourable feature of the giltedge situation is that the Treasury Bills outstandings will be reduced considerably in the next fiscal year. Sir George Schuster said, in his last budget speech, that the floating debt of India should be roundabout Rs. 30 crores and that this was an amount well within the capacity of the Indian market to digest. Sir James now expects that the floating debt in the present fiscal year will be only Rs. 22 crores. By March 31, 1936, there is to be a further reduction to Rs. 18½ crores. If Treasury Bills outstandings are reduced to such a low figure as Rs. 18½ crores, money rates in the short loan market must be extremely easy.

BUDGET BREVITIES

If my analysis of the borrowing programme be correct—and I have no doubt in my mind that it is—3½ per cent. Rupee Paper must record very substantial rise. Its attaining par in the near future is, in my view, inevitable.

Cement shares should shoot up. There was considerable abatement of buying pressure owing to fears of an excise duty on cement. Now that these fears have been dispelled, I see rapid rise in cement shares. When I recommended Shahabad Cement shares last week, they were Rs. 387½. They are now quoting Rs. 430. There is still good margin for rise. Bundis, too, must spurt up.

* * *

There were also serious apprehensions regarding Cotton mill industry. Some said that an excise duty would be levied. Others thought that the surcharge on the import duty as against England would be removed. These apprehensions have now been falsified. The better-class cotton mill shares should now receive considerable support from investors and market operators. Keep a look-out for Central India, Gokak, Bombay Dyeing, Muir and Vasanta.

* * *

The removal of surcharges on income tax and super tax should, in the main, give a fillip to all good shares. Jute shares should receive special attention ; and present prices are most favourable to buyers.

* * *

Public Utilities, such as the Tata Hydro Electric group, must benefit considerably from the assured reduction in the Government's borrowing rate.

* * *

The announced reduction in the volume of floating debt spells easier money. I now look to early relaxation of monetary stringency.

WORLD OF INDIAN FINANCE

Calcutta, March 1.

Credits have kept in persistent demand both in Bombay and Calcutta, with the quotable rate being 3½ per cent. for interbank call money and with hardly any funds available. The sale of Intermediate Treasury Bills has been discontinued ; but this should make no material change in the money market position. The Government were getting precious little from sales of Treasuries at the tap-rate ; and if, on stray occasions, the realisations were on the large side, this was, perhaps, mostly due to applications from special quarters. So far as the money market is concerned, the discontinuance of Treasury Bills cannot, therefore, mean the stopping of the drain as there was really no drain. From the budget announced on Thursday evening, it would appear that the deliberate policy of Sir James Grigg is, following the recent practice of the British Treasury, to reduce the floating debt by stages. On March 31, 1934, Treasury Bills outstandings with the public were Rs. 33.31 crores. Sir George Schuster anticipated that the closing figure would be Rs. 30 crores. The actual figure was, therefore, Rs. 3 1/3 crores in excess of the budget expectations. Sir George was also responsible for adumbrating the view that the money market had got so accustomed to Treasury Bills that a floating debt of the size of Rs. 30 crores was not only possible but essential in the Indian financial world. Sir James proposes now to bring down the floating debt from Rs. 33.31 crores at the beginning of this financial year to Rs. 22 crores at the end. By the end of the next financial year, Treasury Bills outstandings are to be brought still further down to Rs. 18½ crores.

The reduction in the size of the floating debt is certainly calculated to further the cause of cheap money. Between now and the end of the financial year there will be repayment to the market of about Rs. 4 crores after taking into account what the market would be taking up in the form of fresh Treasury Bills. It is quite possible that this policy will cause some relaxation in the monetary stringency which has persisted for over ten weeks. But we cannot understand why there is all this reluctance to expand currency against surplus sterling securities, when this is the simplest solution of the stringency problem. It may be that the Government argue that as the cash balance of the Imperial Bank is tending to rise, expansion of currency is inadvisable. We cannot share this view. Such expansion of currency as we advocate has nothing to do with the cash balance of the Imperial Bank. This expansion is the direct result of sterling purchases being in excess of the budgetted programme. Is it at all advisable for the Government to pay interest to the Imperial Bank on Ways and Means advances while they receive next to nothing on their swelling sterling balances. The Imperial Bank must be happy to get all this interest ; but why should the Government be so anxious to oblige the Bank in this regard ? While we fully endorse the new Treasury Bills policy announced by Sir James in his budget, we do still think that some measure of expansion of currency should be effected. At the same time that expansion is made, a portion of the currency so created should be utilised for relieving the market by taking off some securities from it.

To argue that the rise in the cash balance of the Imperial Bank is a valid reason against expansion of currency would be disingenuous. As from February 8, there has been, is is true, a substantial increase in the cash balance of the Bank. It was Rs. 12.79 crores on February 8 ; Rs. 13.45 crores on February 15 ; and Rs. 15.16 crores on February 22. But if we study the returns for the weeks earlier than February 8, there was as rapid a shrinkage in the cash balance. From Rs. 17.80 crores on January 25, the Bank's cash came down to Rs. 15.89 crores on February 1, and Rs. 12.79 crores on February 8. The headlong deterioration in the cash position of the Bank in those weeks did not induce any expansionist tendency in the authorities. Even if the Government are still adamant on this question, we would suggest that they should at least reduce the weekly offer of Treasury Bills from Rs. 1½ to Rs. 75 lakhs. Something positive has got to be done to relieve the market of the extreme squeeze for money which it has been experiencing. The extraordinarily sound

Ways and Means position as revealed in the budget of Sir James Grigg has failed to produce any salutary effect on the stock exchanges mainly because the currency policy of the Government has been such as to induce a monetary stringency that ought not to be there. Had their currency policy been wholesome, the response given to the budget by the markets would have been far different. In the course of our Budget Supplement, we were able to stress the good points of the first budget of Sir James Grigg and we are anxious that the public should give it a proper acclamation. The atmosphere in which the best points of the budget would prove most effective is one in which the sentiment of dear money must be absent.

The exchange market has been featureless. No business has been coming through. It looks as though there is a temporary loss of confidence. There is a total disinclination on the part of exporters and bankers to undertake any large commitments. All the business passing is of a hand-to-mouth nature.

On the sterling tender day, applications for £865,000 at 1s. 6 5/1h., were received and alloted in full. The sterling remittance programme for 1935-36 has been fixed at £26 million.

The closing rates are: 1s. 6⅛d., March 22 T. T.; 1s. 6 3/32d., March 23—April 16 T. T.; 1s. 6 1/16d., April 17—May T. T.; 1s. 6 1/32d., June—Auust T. T.; and 1s. 6d., September-January T. T.

Bills may be quoted: 1s. 6 7/32d., March 28—April 24; 1s. 6 5/32d., April 25—May; and 1s. 6⅛d., June-December.

There has been continued squeeze for funds. Lenders are practically non-existant. Interbank call money may be quoted 3½ per cent. Firms' money for call and three days' notice may be quoted 1 per cent. One month and two month deposits quoted 1¼ per cent.; three month deposits 1½ per cent.; six month and twelve month deposits 1½ per cent. and 2 per cent. respectively.

1677

BANKS:

It is a mistake to think of a Bank as an institution which exists merely for the purpose of taking care of depositors' money and paying it out on their instructions. Whilst it is true that this is the primary business of a Bank, it forms only a part of the duties which Lloyds Bank is prepared to perform for its customers. It is not possible in a short space to enumerate the many facilities the Bank offers, but its Branch Managers are prepared to consider, or, if they are not themselves in a position to advise, to obtain expert opinion upon any question affecting their customers' finances, investments, income tax, Trusteeships, Executorships, etc.

LLOYDS BANK
LIMITED.
(Incorporated in England.)

Subscribed Capital	£75,302,076
Paid-up Capital	£15,810,252
Reserve Fund	£ 8,000,000

Eavesdropper writes:

It was just a fortnight ago that, in commenting on the 1934 accounts of the Indo-Commercial Bank, I handed them a rich bouquet. I am, therefore, all the happier in having another opportunity to refer to the good work and growing importance of this institution. The opportunity is afforded by the offer of new shares, details regarding which appeared in our advertisement columns last week. The deposits of the Bank have been expanding so rapidly that, commensurate with the increased deposits, the capital has to be increased. The paid-up capital as at the close of the last year's accounts was Rs. 5.83 lakhs. The present issue consists of B shares and C shares planned as follows and raising the issue capital to Rs. 16¼ lakhs:

10,000 B shares of Rs. 50 each issued at Re. 1 premium payable as follows:
On application Rs. 10 with Re. 1 premium.
On allotment Rs. 15.
(the balance of Rs. 25 will be held in reserve)
10,000 C shares of Rs. 50 at par payable as follows:—
On application Rs. 5.
On allotment Rs. 5.
The balance of Rs. 40 is payable in eight instalment of Rs. 5 each with intervals of three months.

I understand that, already, a good portion of the present issue has been over subscribed. The Directors have, as I stated on an earlier occasion, undervalued the worth of their own shares by offering them more or less at par. Those who subscribe to the present issue are, therefore, in receipt of a handsome advantage at the very start. The Bank is well-planned; it has a fine repute; it is looked after by a Managing Director who has experience and training, judgment and caution; the Board consists of such distinguished men as Mr. T. R. Venkatarama Sastry and Rao Bahadur C. S. Subramaniam, whose association with the Bank is a guarantee of efficiency and integrity.

* * *

The Bank's articles impose a number of self-denying and other restrictive ordinances which are calculated to keep Safety First as the first and foremost motto of its business. The shares of most of the small-sized banks of South India are commanding a good premium; and there is every reason to hope that the shares of this well-managed bank will equally respond to increasingly favourable results.

Thursday evening

The week is notable for having seen a record high in the sterling price of gold and a record low in the sterling-franc rate. While sterling has been comparatively steady against the dollar, the sterling-franc rate has come down to 73.22 and the chances at present are that an even lower level may be touched. It is reported that Paris is talking of sterling weakening to 70.00. The appreciation of the franc is sufficient by itself to account for the increase in the London price of gold to a record height. In the present conditions, the sterling price of gold is largely a reflection of the value of sterling in terms of gold currencies, though account must also be taken of the extraneous factor of the premium on gold over the franc rate. That the franc should have come down to 73.22 as against 74.03 in the middle of February shows that there has been a radical change in the outlook of sterling during the last two, three weeks. It is necessary, therefore, to examine the causes of this changed outlook. Obviously, they fall into two divisions, the more technical ones pertaining to the position in the exchange and allied markets, and the political and other reasons which determine the long view in regard to any currency.

There is first the new situation brought about by the removal of the uncertainty regarding the gold clause. It was pointed out last week that the decision of the Supreme Court, which, in effect, preserves the *status quo* intact, has brought about a *volte face* in the international movement of funds. In the wake of the movement of funds from New York to Paris consequent on the decision that there was to be no change in the dollar, has come an efflux of funds from London. The weakness in the giltedge markets is due largely to the sales of Government securities which were formerly held in London by foreigners. It is more than probable that the proceeds of these sales have not been re-invested in London but have been repatriated by their foreign owners. Such repatriation necessarily caused a weakness in sterling ; and the fact that sterling has declined to such low levels is proof that the efforts of the Control to check such depreciation have been of no avail and that the movement of funds has been a stronger force than the action of the Equalisation Fund.

Obviously, the movement of funds from London requires to be explained. It is admitted on all hands that from now the possibility of a general election in Autumn will be regarded by the markets as the most potent factor in the exchange situation. The Government have apparently been aware of the significance of the election talks ; and prominent members of the Cabinet have missed no opportunity of emphasising that the election question is not engaging their attention at present. Nevertheless, the markets persist in their belief that a general election is due sooner or later. In any case an estimate of the prospects of sterling in the coming months will have to reckon with the possibility of a change of government and policy. With Labour winning the bye-elections, it is natural that foreign monies are not feeling reassured about their safety and are even finding their way back home. Foreigners usually regard election prospects as more disturbing than the nationals themselves ; and it is natural that, whenever the question of the elections comes into prominence, the foreign exchange market proves to be more sensitive than the Government securities market. The suggestion that a good deal of foreign funds was invested in Government securities has brought about a slump not only in the exchanges but also in giltedge.

In the long view of sterling, therefore, one has to remember the question of general elections. This must be supposed to reduce the chances of a seasonal strength of sterling and also to indicate the possibility that the seasonal weakness of sterling in the Autumn, when the elections are expected to come off, will be accentuated. Sometime ago, we pointed to the possibility that, if 1935 should fail to see the seasonal strength of sterling, the Equalisation Fund would have no opportuntiy of replenishing its stocks of gold and would, to that extent, lack the resources with which to prevent a weakness of sterling when it occurs next Autumn.

The antidote to these uncertainties clearly lies in an early stabilisation agreement among the principal nations. So long as the Supreme Court delayed its decision, it was convenient to suggest that the outlook was rendered hazy by such delay, and that one might expect indications of the future after the Court had delivered its verdict. It would now appear from a statement of Mr. Henry Morgentheau that the American Administration are thoroughly satisfied with the present monetary policy and that they do not contemplate any changes thereon in the near future. Such a statement was provoked by Mr. Hoover, the Ex-President, advocating the policy of stabilising the dollar at its present value. It seems, therefore, that the impetus towards progress on the path of stabilisation will not come for some time at least from the United States. And as the British policy is one of reacting to changes on either side of the Atlantic, the British Control would have to be prepared for all manner of unpredictable developments.

The only factor that mitigates the bearishness of the outlook of sterling is the vacillation which one sees in the authorities in the gold bloc countries. The position in regard to France is that the new monetary policy has proved more and more conclusively a failure, and that the Government will soon have to decide what course they would adopt in order to save the national economy from the stress and strain which the present policy of drift has involved. It can be deduced that the gold bloc countries have recently been exchanging ideas as to what they should do and that they have found it difficult to arrive at common conclusions. So long as they can command faith in the possibility of a rise in prices in non-gold countries, they were able to stand together. But every time there was need for some common action, they showed themselves incapable of coming to an agreement. There is thus a rift in the gold lute which might render it mute before long.

The first sign of this is available in a recent speech of Mr. Colijn in the Upper Chamber of the Dutch Legislature. He affirmed the complete liberty of Holland to alter the currency and monetary policy in the same way as other countries have claimed and exercised it. This affirmation of the obvious cannot be without any purpose altogether. It is not unreasonable to infer that proposals restricting such opportunities had been discussed among the gold bloc

PUBLICATIONS OF THE LEAGUE OF NATIONS

"BALANCES OF PAYMENTS, 1933"

Price: Rs. 4-2-0

Only existing statistical book of reference concerning international accounts (trade in goods and services, gold, long and short-term capital operations). Figures, are given for 32 countries, in the majority of cases for a series of years up to 1933 inclusive. Information is also supplied concerning outstanding international liabilities and assets. In a summary chapter the general tendencies up to September, 1934, are dealt with, special consideration being given to the effect of currency depreciation.

"ARMAMENTS' YEAR-BOOK, 1934"

Price: Rs. 13-12-0

This edition contains monographs on 64 countries, both members and non-members of the League. The information contained is derived from two sources: the communications from various Governments to the Secretariat on the occasion of the Conference for the Reduction and Limitation of Armaments and the official publications of the different countries, such as collections of laws, army gazettes, etc.

"NATIONAL PUBLIC WORKS"

Price: Rs. 8-4-0

This book has just been issued by the Communications and Transit Organisation of the League of Nation and is the result of a letter addressed by the Secretary General of the League requesting various Governments to communicate to him the following particulars: (1) A brief description of the main public works undertaken since the beginning of the year 1920; (2) The principal administrative methods followed or contemplated for the execution of such work; (3) The principal methods employed for financing such work; (4) An estimate, as far as possible, of the allocation of expenditure on the execution of the possible works.

"INTERNATIONAL TRADE STATISTICS, 1933"

Price: Rs. 6-14-0

This volume analyses the foreign trade during the years 1931, 1932 and 1933 of 65 countries accounting for 95% of the total world trade. It contains more than 300 tables, which are accompanied by explanatory notes. The data it gives illustrate strikingly the great changes undergone in recent years in the composition and direction of foreign trade, and their effect in the position of the individual countries. The synoptical tables show the percentage distribution of each country's imports and exports by provenance and destination.

Complete Catalogue sent free on application.

SECOND THOUGHTS ON BUDGET

The Budget Supplement, which we issued on Friday morning and for which we had to go to press within a few hours of the receipt of the Finance Member's speech, was, in the nature of the case, a hasty outline of our first impressions. So far as the general budget is concerned, we expressed the view that its significance lay less in the performance for 1935-36 than in the promise for 1936-37. As for the Ways and Means Budget, we came to the conclusion that the position disclosed in this regard was exceptionally strong. We also drew the conclusions that the financial operations contemplated in the budget should spell an era of cheap money ; and that the borrowing activities in 1935-36 should result in considerable accession of strength to the giltedge market. The views and inferences advanced in the Supplement appear, on deeper scrutiny, to be well-grounded. The markets have not had time to understand the full implications of the Ways and Means Budget. The result was that Friday's trading was marked by considerable caution and restraint. One would have thought that if the interpretations of *Indian Finance* were correct, most markets must have evinced a markedly brighter sentiment. We do not find it necessary to revise our views ; nor would we even modify our earlier optimism. We are persuaded that with fuller realisation of the Ways and Means problems presented in the next financial year, the markets would respond in a more confident fashion.

* * *

Meantime, we would like, in this issue, to deal with some of the broader questions raised by the budget. By far the most important matter that should engage our attention is the creation of the Reserve Bank, the handing over of the currency department to the Reserve Bank, and the inauguration of the Silver Redemption Reserve. We would like to deal with the last first. The remittances in the current year have been so satisfactory that the revised estimate places sterling purchases at £39 million as against the original programme of £26.7 million. Owing to the betterment of the position in this regard, it is proposed to constitute the Silver Redemption Reserve with the full amount of Rs. 10 crores at the very start. It will be remembered that when this proposal for Silver Redemption Reserve was discussed, the intention was that all the proceeds from the sales of silver should be credited to this fund till it grew up to Rs. 10 crores; and that, thereafter, the proceeds from silver sales should be credited to current revenue. Now that the reserve will start with the maximum limit from the very commencement, it follows that all the realisations from silver sales in the next financial year will automatically be appropriated towards current revenue. We do not have Explanatory Memorandum of the Financial Secretary before us and we are, therefore, not in a position to verify the detailed transactions. But, on a general understanding of the budget speech, it appears to us that the Finance Member has overlooked this fact, namely, that the proceeds from silver sales will be available for current revenue in the next financial year. If this is the case, the anticipated surplus must be increased by anything like Rs. 1½ crores to Rs. 2 crores. This is a point which is worth investigating, as, in the event of the Finance Member having failed to take note of this factor, the increased surplus will be sufficient to enable him to reduce the surcharge on income tax and supertax and the quasi-surcharge on the smaller incomes by a half instead of one-third as now proposed. If the Finance Member could see his way to augment the relief to this extent to income-tax payers, it would considerably soften the opposition, especially the opposition from his own community.

* * *

In the absence of the Financial Secretary's Memorandum, our comments on the currency reserves and remittance programme after the inauguration of the Reserve Bank have to be in somewhat general terms. We shall be correct, we think, in assuming that the present intention is that the entire gold stocks and sterling securities in the Paper Currency Reserve and the Gold Standard Reserve are to be transferred to the Reserve Bank; that the Secretary of State will retain whatever cash balance he may have at the end of this financial year after the equivalent of Rs. 10 crores has been set apart from it for the Silver Redemption Reserve; and that the opening balance is kept at a sufficiently large figure in order to enable the Secretary of State to meet his sterling requirements during the first quarter of 1935-36, as the Reserve Bank will assume its full banking business only after the beginning of July. We had, at one time, apprehensions that the entire assets in gold and sterling securities of the Paper Currency Reserve and the Gold Standard Reserve might not be handed over to the Reserve Bank and that such assets will be handed over only for the value of 50 per cent. of the note issue. We are gratified to find that our apprehensions have proved groundless. We congratulate Sir James Grigg on his decision to hand over the entire external reserves in P. C. R. and G. S. R. to the Reserve Bank. This will enable the Bank to start with an extraordinarily strong position as regards external reserves. As on February 15, 1935, assets in gold and sterling securities in the two reserves were as under:

Gold in P. C. R.	...	Rs. 41.55	crores
Gold in G. S. R.	...	,, 2.8	,,
Total gold	...	Rs. 47.35	crores.
Sterling securities in P. C. R.	...	Rs. 14.46	crores
Sterling securities in G. S. R.	...	,, 50.50	,,
Total sterling securities	...	Rs. 64.96	crores
Total and sterling securities		Rs. 112.31	crores.

* * *

Our external reserve is thus Rs. 112 crores against a note issue of Rs. 182 crores. This works out to 61.5 per cent. It should be added that the gold, which is valued in the books at Rs. 47.75 crores, is really worth Rs. 80 crores at to-day's valuation. When this factor is taken into account, our external reserves are nearly 80 per cent. of our liabilities on the note issue. This is, it must be admitted, a position of great intrinsic strength.

* * *

The question arises as to how the external reserves thus handed over to the Reserve Bank will be utilised by the latter so far as the making of the note issue is concerned. Will the Reserve Bank utilise the entire amount of gold and sterling securities as assets against the note liability? Or, will the Bank keep a proportion of the external reserves in the banking department? It seems to us that authorities must come to a definite conclusion

in the matter in the next few days. Our own suggestion will be that the assets in the issue department of the Reserve Bank should be made up as under:

1. Rs. 50 crores of silver coin;
2. Rs. 47.35 crores in gold;
3. Rs. 43.35 crores of sterling securities;
4. Rs. 42 crores in Rupee securities.

* * *

The main idea in this proposal is that the external reserve for the note issue must be 50 per cent. of the note issue at the start. In the proposal as developed above, gold for Rs. 47.35 crores and sterling securities for Rs. 43.65 crores will together make up 50 per cent. of the note issue. This would mean that there will be a surplus of sterling securities from Rs. 21.31 crores. We suggest that this amount should be kept in the banking department of the Reserve Bank. It may well be that, during some months, the Reserve Bank may not be able to purchase sterling in the open market. If, in such periods, the Bank has to keep the Secretary of State provided with sterling funds, the sterling balance of Rs. 21.31 crores in the banking department would come handy. If, on the other hand, the entire external reserve is kept in the issue department and sterling securities are with drawn on occasions when the Secretary of State has to be financed during a period marked by exchange weakness in India, the withdrawal of such sterling assets would necessitate contraction of currency. It is to prevent such fluctuations that we suggest the transfer of about Rs. 20 crores of sterling securities to the banking department. The equivalent of Rs. 20 crores would be sufficient to enable the Reserve Bank to finance the Secretary of State for six months even though the exchange market in India should, over such a period, prove unhelpful for sterling purchases.

ILL-STARRED REFORMS

The course of political reform never did run smooth. But history has no parallel for the upsets which have occurred ever since the British Parliament appointed the Simon Commission to enquire into the question of Indian constitutional reform. And none of the earlier upsets can compare with the official statement of the Indian Princes on the question of the Federation. They have stated categorically that the understanding between themselves and the British politicians in regard to the rights of the States has not been implemented in the Government of India Bill now under discussion and that they would not, therefore, look at Federation till certain radical changes are effected and unequivocal assurances afforded. This statement has been widely described as a bombshell ; and whatever may be the ultimate upshot of it, there can be no doubt that it has caused consternation among the British politicians, who are now fast discussing the Bill and who regard the scheme it embodies as virtually a *fait accompli*. The ministerial ranks are more disturbed, as they know only too well to what purpose the Churchillite section can put a development like this. Only the other day it was formally moved in Committee that the discussion of the clauses relating to the States be postponed till the views of the Princes were ascertained. Sir Samuel must have had his own premonitions at this gloomy reference to the possibility of princely defection ; and now the forebodings have proved true.

* * *

The reactions, which the statement has produced in the minds of the various parties, form, indeed, an interesting study. Sir Samuel Hoare, who has brought to the task of reforms a sense of duty and detachment without all precedent, has well-nigh succeeded in regaining his composure. But there can be no doubt that his first feeling was one of having the whole ground pulled from under him. And even in his statement before the Committee he showed no desire to underrate the gravity of the problem. He made it clear that the Princes could, if they chose, state clearly that they have no intention of entering the Federation, but they would have to say so, here and now, instead of leaving the British Parliament to plough the sands for ever. But for his own part, he seemed to be satisfied that the Princes were labouring under a misunderstanding and most, if not all of their objections could be met without any alteration of the present plan of reforms. The utmost that would have to be done is a few verbal changes in certain clauses of the Government of India Bill.

* * *

Prima facie, there is much truth in the contentions of Sir Samuel. The Princes' objections to the Government of India Bill in its present form come under two main heads. The first refers to the conditions of entry into the Federation; and the second to the condition which would obtain if and when the Federation is dissolved. They believe that clause 6 of the Bill requires them to submit to the Federal régime in all matters, though a subsection specifically assures them the right to choose the items in the Federal legislative list, which each State would agree to surrender to the Federal authority. It is not quite clear whether the States hanker after the clearly untenable right to decide disputes under the Instrument of Accession all by themselves without the intervention of a Supreme Court. If they do, their case is hardly worth consideration, for a Federation without a régime of Federal law is altogether inconceivable. Another point, which has been specifically mentioned in these discussions, is the unwillingness of the States to hand over their railway system to an Authority which has little to do either with themselves or with the British India with which they are federating. Apart from the objections which British India has always had for a

Statutory Railway—and they are, indeed, very weighty —the provisions of the Government of India Bill regarding the Railway Authority show little respect for the rights of the Railway systems of the States. The States being in a position to bargain about the terms, on which they would enter the Federation, they have naturally recorded their disapproval of this point.

* * *

The most serious affront to the sovereignty of the Princes lies, according to them, in Section 45 which refers to provisions in case of failure of the constitutional machinery. According to this section, the Governor-General "shall have power to assume to himself all or any of the powers vested in or exercised by any Federal body or authority" when he is satisfied that a "situation has arisen in which the overnment of the Federation cannot be carried on in accordance with the provisions of this Act." The only exception specified in a sub-section is in respect of the powers of the Federation Court. There is no mention of the position of the States in the situation envisaged by this Section; and it is, therefore, to be presumed that in the event of a comprehensive proclamation contemplated by this section the jurisdiction that the States would be surrendering to the Federation on their accession, will pass *ipso facto* to the Governor-General on his issuing such a proclamation. Clearly, such a position would be untenable. The States agree to participate in the Federation on the supposition that the Federal authority would be exercised by the constituent units acting together. And if at any time the Governor-General should assume to himself the entire authority over the Federation, the States should be at liberty to regard his Federal contract as null and void. The view that the Princes take, apparently, is that equality of status of the constituent units *vis-a-vis* the GovernorGeneral in a time of constitutional crisis is a detraction from their status as sovereign States. The representative of the Princes, who has chosen to favour the public with an interview to the Associated Press, has, unfortunately, not been in a position to specify the demands of the Princes in regard to the objections cited above. It is to be wondered whether the States would like to regard such a crisis as an opportunity for retreating from the Federation or whether they would prefer to have the Federal contract in abeyance during the time in which the proclamation contemplated in Section 45 is in force.

* * *

It will be seen from the treatment of this question that the objection regarding Section 6 is based on a misconception. At any rate, the States would have to be content with their right to choose the subjects over which they would be prepared to accept Federal legislative authority. If they do not, the British Government and the British India public would be justified in regarding their devotion to the Federation as suspect and in concluding that the Princes are going back upon their historic declaration in the first Round Table Conference. But the second and the third objection are on an altogether different footing. But even here, the British Government may not, ultimately, be found to be unwilling to concede that the State Railways might be exempt from the control of the Federal Railway authority, except in so far as the co-ordination of transport policy in the Federation may require interference in matters of internal administration. In any case, the reconsideration, not to speak of the re-drafting of these clauses would be required ; and it is extremely doubtful whether the settlement acceptable to both parties could be arrived at.

* * *

The third objection as regards the position of the States during a constitutional crisis is, obviously, the most ticklish part of this question. As we have observed already, we have had so far no means of knowing the exact demands of the Princes. But we believe that the British Government would not find any insuperable difficulty in accommodating themselves to the new situation. They might concede eventually that the position of the States in the event of a crisis necessitating a

suspension of the constitution would be different from that of the British Indian Provinces. They might provide that, during the period in which the Governor-General assumes by proclamation the powers and functions of every Federal authority exexcept the Federal Court, the position of each participating State would be the same as befora the formation of the Federation. Thie would be a flattering concession to the viewpoint of the States ; and it would at the same time make little practical difference. For, what the Governor-General loses by such a provision, he might conceivably gain as the representative of the Crown with the powers of the pre-Federation period.

* * *

But such a provision would be tantamount to rubbing it into the British Indian Provinces that they are not free agents in the Federal contract. In fact, any accommodation that the British Government may show to the Princes in the present juncture may bear such an interpretation. Throughout the latter stages of the discussions on the Reforms British India has been nowhere in the picture. British Indian opinion on the Government of India Bill, however unanimous, has had no effect on the British politicians ; and deference to the Princes would now be a twofold offence. To say more would be inappropriate, as we have not yet had any clear indication of the official policy ; and it must be presumed that the policy is being deliberated on.

* * *

The reactions on British India of this unexpected development are, indeed, more difficult to gauge. The common feeeling is one of satisfaction that the edifice of Federation, which British politicians are rearing so assiduously in defiance of Indian opinion, is being rocked to its foundations. But there is little effort made to determine the spirit in which the Princes have now put the spoke in the Federal wheel. It makes a great deal of difference to British India whether the Princes were actuated by undue concern for their sovereignty or by dissatisfaction with the division of power at the Centre. One would, indeed, wish that it were the latter. If the aim of the Federation were to create a Pan-Indian spirit, it is well that the States showed some evidence of it, even in an incipient form, before their accession to the Federation. The report that States like Mysore and Travancore are behind the statement encourages the belief that more statesmanlike considerations have been at work. But whatever the facts may be in this matter the truth is that the real interests of the Princes lie in an autonomous Federation with a really responsible executive. So far, the Princes have allowed themselves to be handy pretext for making the constitution more and more reactionary. The Federation was acceptable to the British politicians because it helped to give a new complexion to the whole question of responsibility at the centre. It pointed to a division of powers which was the best tactics to adopt as against the British Indian politicians. The British have never concealed their satisfaction that the States' representatives in the Federal Legislature will prove handy in thwarting the popular representatives of British India. It is time that the Princes cease to play this unedifying rôle and pull their weight with the rest of India in the common interest. It is up to them to give these ill-starred "reforms" an anspicious rebirth.

THE MADRAS BUDGET

It is always a relief to turn from the Budgets of other provinces to that of Madras. For not only has the Madras Budget all the marks of a progressive administrative policy with a well-proportioned outlay on current and capital expenditure, she has also preserved the integrity of her finances during the trying period of depression in trade. Only in the case of Madras is it possible to single out a financial policy as such for criticism or for approbation. It should not be supposed that the Finance Member of the Government of Madras has got an easy task, making small adjustments in expenditure and revenue so as to bring them together, though it is often said that the Meston Award has been very kind to the Southern Presidency leaving it in possession of greater resources compared to expenditure. We have, on former occasions, pointed out that in Madras the efforts to anticipate the effects of the depression and provide therefor by timely retrenchment were successful in ensuring that the years following 1930-31, were years of small surpluses and not heavy deficits. And at the present time, the Madras Government have had to consider the claims of the agricultural classes to a remission of land revenue by as much as 33⅓ per cent. Though the decision has been, on the whole, against the agricultural classes, the Government have had to part during these years with considerable amounts by way of remission of land revenue. So that it has not been all smooth saling for the Finance Member in Madras. It must, therefore, be conceded that, if the Madras Government have kept a sound position, it is not due merely to more favourable circumstances. The Budget which was announced last week is the last from the present Finance Member and the occasion is, therefore, apt for a review of the quinquennial regime of Sir Hopetom Stokes.

* * *

Sir Hopetoun took up the Finance Membership at the end of the run of good luck, which was the lot of his predecessor. In the year 1930-31, the Budget which was prepared by Sir Thomas Moir, closed with a deficit of Rs. 105¾ lakhs against a budgetted deficit of Rs. 16.61 lakhs and a revised estimate of Rs. 56.39 lakhs. It may be said that during 1930-31 the Government were caught more or less unawares and

that the real work of financial reconstruction could be attempted only during the course of 1931-32. At the time of the budget 1931-32 was expected to end in a deficit of Rs. 9.45 lakhs. In the revised estimate it had to be put up to Rs. 50.74 lakhs. But in the end, owing to the efforts at retrenchment and the expansion of excise and stamp revenue, the year ended in a small surplus of Rs. 5.41 lakhs. 1932-33 yielded a surplus of Rs. 77.21 lakhs, against the revised estimate of Rs. 62.77 lakhs. The same tendency of actuals proving better than earlier revised estimate, was experienced in 1933-34, when the actual surplus of Rs. 6.25 lakhs compared with the revised estimates of Rs. .61 lakhs and the budgeted estimate of Rs. 4.08 lakhs. For during the year 1933-34 the actual revenue fell short of the revised estimate by Rs. 25.21 lakhs, the figures being Rs. 16.03.06 lakhs as against Rs. 16,28,27 lakhs. But the expenditure showed a decrease of Rs. 30-85 lakhs from the revised estimate ; and as has been said already, the year closed with a revenue surplus of 6.25 lakhs. The shortage in the revenue occurred mainly under land revenue and excise. The decrease in expenditure is due to the fact that work was seriously interrupted by cyclones and the floods. The actual closing balance of the revenue account for 1933-34 which is also the opening balance for 1934-35, comes to Rs. 284.60 lakhs.

* * *

As for 1934-35, the revised estimate of revenue stands at Rs. 16,02.57 lakhs against the budget estimate of Rs. 16,43.63 lakhs. Expenditure is expected to be lower by Rs. 17.56 lakhs as compared with the budget estimate. The result is that as against a budgeted surplus of Rs. 4.46 lakhs the year is now expected to end in a deficit of Rs. 19.04 lakhs. The fall of Rs. 41.06 lakhs in revenue is accounted for by Rs. 26.12 lakhs under land revenue, Rs. 8.61 lakhs under excise and Rs. 12.44 lakhs under stamps. This large decrease is offset only to a minor degree by the additional revenue from hydro-electric schemes and under the motor vehicles taxation. As regards expenditure the only point which calls for note is that the anticipated lapse under civil works is only about Rs. 11.23 lakhs as compared with a lapse of Rs. 20¼ lakhs in the preceding year. One of the measures to the credit of Sir Hopetoun is the insistence that the spending departments should gauge their requirements fairly accurately without any large error eitherway. His efforts in this regard have apparently met with success. After providing for the revenue account deficit of Rs. 19.04 lakhs and the withdrawal from the revenue balances of the sum of Rs. 50.80 lakhs required for the Cauvery-Mettur Project and other capital expenditure, it is now expected that the year 1934-35 will close with a revenue balance of Rs. 214.76 lakhs.

* * *

For the year 1935-36, the budget estimates are prepared on the assumption that the concessions on account of the general economic depression given in the year 1934-35 will be repeated in its successor. Upon this basis taking Part I of the Budget only, revenue is put as Rs. 16,48.80 lakhs and expenditure at Rs. 16,11.04 lakhs representing as compared with the revised estimates of the current year an improvement in revenue of Rs. 46.23 lakhs and a savings in the expenditure of Rs. 10.57 lakhs. Of the improvement of Rs. 46.23 lakhs in revenue, Rs. 37.90 lakhs is accounted for by land revenue receipts. This is based on the expectation that the monsoons next year will be normal, that the postoponements of revenue will be realised. An amount of Rs. 4½ lakhs is also expected to be received from the Cauvery-Mettur Project. The Hydro-electric schemes, it is hoped, would yield an increase of Rs. 3.76 lakhs. As against these, there is a fall of Rs. 2.16 lakhs under interest owing to the fact that the provincial governments will not be able to deposit with the Government of India as alarge an amount of the provincial balances as in the previous year.

* * *

The figures of expenditure (Part I) charged to revenue show a decrease of Rs. 10.57 lakhs as compared with the revised estimate for the current year. The decrease is accounted for largely by the decision to provide for various grants and new schemes under public health, miscellaneous grants and civil works under Part II estimates, and to debit the expenditure on certain large schemes directly to capital. In Part II, the Finance Committee decided to recommend schemes involving a net cost of Rs. 33.71 lakhs in 1935-36, of which Rs. 30.47 lakhs is non-recurring and Rs. 3.24 lakhs recurring. The Government have also found funds for a few other schemes which were placed in Class III by the Finance Committee, that is, schemes which should be taken up as soon as funds are available. The cost of these in 1935-36 will be Rs. 58,100. The total net cost, therefore, of Part II schemes for 1935-36, after taking into account the additional revenue, works out to Rs. 34.29 lakhs against Rs. 39.14 lakhs available. The gross demand of Rs. 34.58 lakhs is divided in the proportion of 3 : 1, between the transfer and in the reserve departments. If the anticipations as to revenue are fulfilled, these estimates would leave a small surplus of Rs. 4.85 lakhs.

* * *

The estimates for the capital and debt heads provided a sum of Rs. 88 lakhs for existing Part I commitments. Of these Rs. 4.94 lakhs relates to

Part I	54.56
Part II	22.55
	77.11
Revenue Closing Balance in 1935-1936	142.50

* * *

The source of dissatisfaction in the above budget is, indeed, obvious. There is, of course, the question of the salary cut which was restored earlier in Madras than in other parts of India. On this point, it has never been useful to comment at length. Leaving aside this question, the demand for a remission of land revenue is bound to figure a great deal in the budget discussions. Our correspondent for South India has dealt with this question in some detail. The Government have all along argued the question only from their side. A cut of one third in one of the principal sources of revenue must have its consequence on the tax collection. But the real question is the comparative merits of budgetary equilibrium and the soundness of economic life in the country at large. We have dealt at some length with the capital expenditure of the Madras Government only to make it clear that revenue is bearing an undue portion thereof and that in a time of stress and strain the Government ought to consider the advisability of releasing a portion of this capital expenditure for affording relief to the agriculturists. It is, indeed, a pity that on this question the Government are not able to appreciate the viewpoint of the Council. And it is a fundamental defect of the constitution that the Executive should be free to decide these questions by itself without sharing the responsibility for administration with the Council.

It must be said in fairness to the Finance Member that his action is inspired by the view that agricultural conditions have already shown a considerable improvement since the time the demand for remission was first formulated. But if one goes through the economic survey afforded by Sir Hopetoun as an introduction to his budget supplement, one will find that the improvement which he has noticed is only in respect of the minor commodities and not in regard to the staple on which the agriculturists depend to so large an extent, namely, rice. Even in regard to groundnuts and *copra*, where the rise in prices has been so marked, it is extremely doubtful whether any large part of this benefit has reached down to the masses of cultivators and whether the improvement has not stopped with the speculators in the markets. In any case, so long as the price of rice remains below the economic level, there is hardly any justification for the Government taking the view that remission of land revenue is not necessary.

* * *

The action of the Government in this regard cannot detract from the quality of Sir Hopetoun's financial administration.

INDUSTRY BEFORE POLITICS

Sir M. de. P. Webb, C.I.E., C.B.E., writes:

A student of the daily Press of to-day cannot fail to observe how large a proportion of the news is now occupied by matters political, especially in Indian-edited newspapers. This is, perhaps, to be expected, having regard to the efforts now being made to evolve a new constitution for India which would more closely resemble that of Great Britain, or of the sparsely populated continent of Australia (or of Canada, or South Africa), than the constitution under which this country is at present governed.

And yet there is room for doubt whether this widespread concentration of thought and energy on political questions is wise at the present time; or, indeed, at any time.

* * *

India is mainly an agricultural country, as many as 250,000,000 souls being directly or indirectly dependent on agricultural industry and trade. During the last five years the prices of agricultural products have shrunk by *almost fifty per cent.* But neither Government nor the money-lenders' demands have been reduced proportionately. Moreover, the imposition of heavy import duties on all foreign goods that cultivators need, makes the position of agricultural interests in India still more precarious. Governments (Provincial) collected Rs. 35,20 lakhs (estimated) of Land Revenue in 1933-34, and Rs. 33,00 lakhs in 1928-29; so that, notwithstanding remissions here and there, the position has worked out that the *less* that agricultural interests have received in recent years for their products, the *more* Land Revenue, on the whole, Government have collected.

* * *

Which brings into prominence the point that is so frequently overlooked, namely, that *profitable production and successful trade are the* only *sources from which come the surpluses that support the entire economic and political structure, including all the machinery of Government.* In other words, *it is only by aid of Industrial Surpluses, regularly and continuously produced, that progress—social, economic, political and of every other kind—can be maintained.*

Which being so, the most important question of to-day is—Are these vitally important surpluses from profitable production and successful trade being steadily and continuously maintained? Have they been so maintained during the last five years?

* * *

The answer, so far as Indian agriculture is concerned, can leave very little room for doubt: for in nearly every Province of India, efforts are being made to-day to relieve agriculturalists (by legislation) of a portion of the burden of an indebtedness that is now threatening to sink them.

* * *

This leads to the further question—Can *permanent* relief be obtained by *temporary* remissions of agricultural indebtedness? Are such remissions likely to be of *permanent* value to agriculturalists so long as nothing is done to correct the recent distortion in the purchasing power of their money? or in other words, so long as nothing is done to raise the general level of the prices which agriculturalists are receiving to-day for the products of their fields? Obviously not.

Unfortunately, statistics do not indicate that manufacturers, traders, exporters, and importers are in a much better position than the agriculturalists. Thus, Customs Revenue, notwithstanding repeated increases of duties, (including Excise), yields less to-day (about Rs. 50 lakhs—official estimate), than it did in 1929-30 (Rs. 51,30 lakhs); whilst Income Tax, in spite of increases, of Super-Tax and of Surcharges, is bringing in only the same amount (Rs. 17,10 lakhs—official estimate), to-day as it did five years ago, and *over a crore less than it did in* 1923-24!

All of which facts point to the conclusion that, taking the production and the trade of India as a whole, this country is not to-day maintaining its surpluses or profits at a level that will permit further progress to be made for the time being. On the contrary there is evidence—diminishing returns under certain heads of taxation,—to show that the great mass of the people are still on the post-war down-grade, rather than on the heartening up-grade that present day agricultural and manufacturing possibilities most certainly warrant.

The figures of India's overseas trade of the last confirm this conclusion. Here they are

Years ended 31st March		Exports Goods Rs.	Imports Goods Rs.	Total Crores Rs.
1930	...	317	238	555
1931	...	225	163	388
1932	...	160	126	286
1933	...	135	132	267
1934	...	149	115	264

If India is *not* at present maintaining her surpluses or profits at a level that will permit of any further progress for the time being, (Is any trader going forward to-day?), where is the wisdom in devoting so much time and thought to *political* possibilities which, relative to the *economic* morass in which the country is floundering, are merely a minor consideration? Surely, in the present crisis, Industry comes before Politics? For everything depends on successful industry and trade.

Let us then concentrate on Industry rather than politics. This is the Age of Plenty, and there is every possibility of a return to early prosperity for all if only we abandon our present attitude of helpless acquiescence in what so many seem to regard as an "Act of God," and recognise the truth which is that the present unparalled world depression is *not* an Act of God, but the direct consequence of the folly of man.

What we now have to do is to rectify past errors. The clue to returning prosperity lies open before us, and is recognised and accepted by all expert economic authority. *The Inauguration of a period of rising prices till the level of five years ago is restored,* is the first step to be attempted. Let us concentrate our attention on this first problem. It *can* be solved. It *shall* be solved.

A HEARTENING PRONOUNCEMENT

The speech of Mr. Gavin Jones at the annual meeting of the Upper India Chamber of Commerce last week is in many ways an encouraging pronouncement. There is first of all, a robust optimism in his outlook on the future which, one would wish, were more infectious than it has so far been. Secondly—and this is far more important—it points to a growing fusion of Indian and British commercial opinion in all matters of fundamental economic policy. Thirdly, even in matters purely political there are points in Mr. Gavin Jones's speech with which Indian nationalist opinion will find itself in hearty agreement. It is refreshing, though it holds out no promise of improvement, to hear that when the Upper India Chamber supported the resolution of the Associated Chambers regarding the J. P. C. Report, "we did so more in acquiescence in what appeared to be practically a *fait accompli* than with any love of the scheme". Mr. Gavin Jones is sure of applause all over this country, when he insists that the Financial Adviser under the new constitution will be under the influence of the City of London and that "India should be free to control her monetary and economic policy." As regards the Federation Mr. Jones puts his finger to the crux of the whole problem when he points out that some of the clauses of the Government of India Bill are apt to endanger freedom of trade and commerce and that any sacrifice of this or other essential federal principle will result in an unsound Federation. There are, however, a few points like indirect elections and division of functions, on which we shall not be able to enthuse in the same manner. But there is sufficient even in political questions to show that the gulf is being fast narrowed.

When we consider the views of Mr. Gavin Jones on purely economical questions, there is hardly any point over which we need disagree. Even in his criticism of the U. P. legislation on Agricultural indebtedness, Mr. Gavin Jones only insists that Debt reconciliation Boards should function and arbitrary powers

should be used only when efforts at conciliation fail—which is a perfectly reasonable contention.

On a careful appraisal of the views expressed by the President of the Upper India Chamber, it will be found that Mr. Gavin Jones is actuated by the most carefully evolved ideas regarding the best economic policy for this country. He has studied the question of the effects of discriminatory protection on the internal prices and the consumer and has come to the conclusion that internal competition has invariably brought down prices and that, therefore, not only has the consumer not been penalised, but he has been benefitted by the expansion of the internal market and the the internal purchasing power. Mr. Jones has not the slightest doubt that the policy of discriminating protection has justified itself. There is, therefore, an insistence that India should follow up the policy with measures formulated in the light of this experience. He has made a vigorous protest against the ceaseless quest for foreign markets and has entered a reasoned plea for the development of internal trade by a better policy at home and more careful action as regards the competition of foreigners in the Indian market. The better policy at home would consist in a greater expertise in the Commerce Department, a better co-ordination of transport, and a revision of Railway goods tariffs. As regards competition of foreigners, Mr. Gavin Jones has afforded a penetrating examination of the secret of Japanese dumping. While he recognises the technical advantages of the Japanese, he also, cites in full the aids which the State offers to the export industries in their efforts to capture foreign markets. So far as India is concerned, Mr. Gavin Jones is certain, as so many others in this country, that the beginning of any national economic policy is the devaluation of the rupee. We congratulate Mr. Gavin Jones at the thought and courage which have gone to make this valuable pronouncement. The large agreement between Indian and British commermcial opinion as to the essentials of a new economic policy furnish an invaluable common ground of action which it may be hoped will be fully exploited without further delay.

ECONOMIC RECOVERY

Within the past week representative business men have recorded afresh their views on the economic situation. In a comprehensive address at the annual general meeting of the Indian Chamber of Commerce, Mr. A. L. Ojha pointed out that, though 1934 had not witnessed the emergence of any new and original plan for economic recovery, it had maintained the march of progress towards such recovery which began in the latter half of 1933. In his view, the most significant development is that national planning is accepted everywhere as the soundest approach to economic recovery. And we are glad to note that the President of the Indian Chamber of Commerce is to be reckoned among stalwart champions of national economic planning. And as planning is not purely a matter of increased production, Mr. Ohja rightly drew attention to the huge outflow of gold since 1931, which represents in value over 220 crores. Having tided over the acutest period of depression by living on her capital resources, it is easy to appreciate, Mr. Ojha said, the re-actions of such a policy on the national economy.

A couple of days after Mr. Ojha's address, Mr. Adamjee Dawood presided over the third annual meeting of the Calcutta Muslim Chamber of Commerce and, confining his remarks to Bengal, commended the lead given by His Excellency Sir John Anderson to economic planning for the Province. Mr. Dawood gives no more than tentative approval of the scheme of voluntary restriction of jute. For he insisted as, indeed, we have done both in our columns and at the meeting of press representives in Writers' Buildings that the Government of Bengal should have in readiness alternative measures which they would bring into operation in the event of failure of the present scheme. He added significantly that jute had not maintained the improvement in price that took place subsequent to the announcement of Government plans in September last. In reviewing the coal industry, in which Bengal is vitally interested, Mr. Dawood regretted that the Railway Budget had neither removed the surcharge which presses so heavily on the industry nor accepted the restriction scheme advocated by the trade.

We congratulate both Mr. Dawood and Mr. Ojha on bringing about a general consensus of opinion among the business community on matters of national importance and thus demonstrating their width of outlook which reaches far beyond the confines of their own personal business interests.

The annual budget is acclaimed by the artists in gossip and the traffickers in rumour. The month or two prior to the budget announcement marks the gala day of these worthies. *Budget khabbar kya hai?*—is the universal query. And quacks are only too ready with all plausible answers. The answers have their root mostly in the imagination of the informants, and partly in the market manipulations which the latter seek to put through. What will not any of our professional gamblers pay to get a budget copy a day in advance! The only other document equally prized is the jute forecast. The assiduity shown in gathering forecasts is truly prodigious. This is almost the only year in this decade when I have kept out of Delhi during the budget session of the Legislature. I must have listened to over a dozen budget speeches from the visitors gallery. And, while in Delhi on the eve of the budget, I used to be pestered by trunk calls from both the Western and Eastern capitals; Budget *khabbar* was the quest of these long-distance calls. Many an Assembly member gets pulled up like this; and most folk hold the facile view that financial journalists and central legislators could get scent of information in advance. I won't say that information has not leaked out on occasions. But such leaking is through the bottom, not at the top. The first budget of Sir James Grigg brought out the usual crop of rumours; the usual prophets parted with their precious inside knowledge for substantial consideration; and markets rose and fell as this rumour or that held sway. The budget day is now past—God be praised, it has passed off. I hope, we in this office will now have some peace from importunate seekers of budget truths.

On the eve of the budget, the market-place hummed with reports and rumours of all kinds. The surcharge on income tax and supertax is bound to be removed—so ran a report.

No, was the rejoinder, this is hoping against hope.

Well, there will be at least partial abolition.

Now, you talk sense. May-be, five per cent. out of the twenty-five per cent. may be wiped out.

You must be bearing the market to take so gloomy a view. Sir James must feel bound by his predecessor's pledge; and the minimum relief must be half the surcharge.

What a hope! You may thank your stars if it is quarter the surcharge.

Be this as it may, the silver duty reduction is as certain as the sun will rise on the budget day.

Yes. There will be some reduction. But it will be a paltry reduction of two annas per ounce.

You gas on as though the Finance Member consults you in these matters. The silver duty will be reduced to two annas, not by two annas.

And they argue quite excitedly until they decide on a wager. The duty reduction to two annas will make A richer by Rs. 1,000; and the duty reduction by two annas will enrich B by a like sum.

And, then, they start exchanging ideas on cement excise and so on. There are bets on information, and bets on the repercussions which should ensue from information turning out this way or that. The budget must occasion shifting of crores of rupees from sundry bank accounts to sundry other bank accounts. It is altogether an exciting business. And the speculator, after the disclosure of budget secrets, pays up the losses or gathers his gains and feels as relieved as the Hindu patriarch feels at the end of the marriage festivities of his daughter.

Sir James Grigg's maiden performance in the Indian budget-framing business is characteristics of the man. It is fascinating to take a rapid survey of the past twenty years and see how each Finance Member's personality is best revealed in his budget speech. Sir William Meyer's quiet reserve and dignified elegance were writ on each page of his speech. Sir Malcolm Hailey's was marked by his debonair grace and persuasive eloquence. Sir Basil Blackett's budget style displayed his pugnacity, combativeness, intense self-confidence and easy mastery over his subject. Sir George Schuster was lucid but meandering, exhaustive but also exhausting. There was almost a cloying sweetness, a satiating plenty. Sir James Grigg's speech shows him up as blunt, curt, crisp and relentlessly direct and straightforward. Here is no laboured prologue or affected epilogue. Here are no imposing tables nor erudite argumentations. Here are the basic facts of the story told in the simplest way. He is not worrying about the cadence of his phrases or the periods of his sentences. He almost fights shy of eloquence. He runs away from the flowery style of description. No peroration at the end, but just a frank avowal that his performance is neither too good nor too bad. It is an unvarnished tale—but a tale narrated by a very Othello amongst budget-framers. It is arresting, convincing and understood by one and all. The man in the author is best revealed in his writings. The man in the Finance Member is best glimpsed in his budget.

The passage, which stands out for its superlative excellence of thought and style, sentiment and character, is the one in which he refers to his predecessor. It will be remembered that, last August, Sir James made a somewhat gloomy remark as to the prospects of realising Sir George Schuster's revenue estimates. Sir James expresses his contrition for this hasty remark ; and it were hard to intertwine apology and tribute in a more graceful blend. Sir James says:

> "I ought to have known better than to turn myself into a prophet on so slight an acquaintance with India. It would also be fitting that I should pay a tribute to him for the hard and unpleasant work he performed in securing budgetary equilibrium in this country and express my sympathy that the fruits of his unremitting toil should not have fallen to him before his departure."

This is in striking and refreshing contrast to his predecessor's attitude to the latter's predecessor. In all the five and a half years of Sir George's regime, he was innocent of one graceful reference to Sir Basil. Sir George commenced his Indian career by flirting with Sir Basil's enemies. He went about as though he were the inheritor of a hopeless legacy. Any adverse comments about Sir Basil seemed to soothe him. Throughout the Reserve Bank discussions, he had not a word to say in gratitude to the man who had left everything cut and dry for him. Sir George posed as the unhappy victim of the whirlwind while Sir Basil sowed the wind. Those who have known Sir George and Sir James will realise that they are opposites by temperament and in outlook. There is, greater fragrance in the bouquet which Sir James presents his predecessor. A little touch like this really lights up a man's genuine nature.

It is difficult, at the moment, to divine what kind of treatment his budget will receive at the hands of the Congress Opposition. Ever since G. K. Gokhale framed his criticism of the budgets of his day, most of our legislators have been content to repeat, parrot-like, all his arguments about high-salaried officials, heavy military budget, starving of nation-building departments and so on and so forth. Real original criticism and constructive suggestions have been rare indeed. In the last Assembly, Sir Shanmukham Chetty and in the Council of State, the Hon'ble Mr. B. K. Basu were responsible for diverting discussion from the revenue-expenditure items to the ways and means budget. On the present occasion, it is quite possible that criticism will follow the old lines. Why is the salary cut restored? Why is all this tribute to the military department? Why is the loss on the strategic railways not debitted to the Army Budget? Why are there no tax reductions? Why is the poor man's salt taxed? Why is the rich man's income supertaxed? It seems to me, however, that while everyone of these criticisms is correct and proper, reiteration does not necessarily mean emphasis; at any rate, reiteration does not certainly mean redress. Cannot the budget discussion bring up some questions in which the Opposition can compel Government to see reason and to adopt measures which must benefit the Government and the country alike? I should like discussion to centre on three points :

1. Need for overhauling the Indian taxation system.
2. Taking full advantage of the impregnable ways and means position for the converting of the 3½ per cent. Rupee Paper and 3½ per cent. Sterling Paper and the immediate reduction of interest charges by this means.
3. Active and honest pursuit of cheap money policy ; and, towards this end, the assurance that the sterling exchange standard would not be manipulated.

These three topics arise directly from the budget of Sir James ; and if the Opposition succeed in influencing the policy of the Government in this regard, they will be taking definite and positive measures for the solution of the economic puzzles of the day. The increase accruing from revised taxation and the savings accruing from favourable loan conversions should be utilised for permanent and recurring measures designed to redeem Rural India from her indebtedness, poverty and misery. Mahatma Gandhi's Village Industries Association has provoked a gift of Rs. 1 crore from Sir James for rural uplift. Spasmodic thought for the masses can be no enduring cure. What is wanted is planned effort to tackle rural problems both in components and as a whole. Firstly, energy of thought and fervour of sympathy are needed. I, for one, would not attribute motives to this gift of one crore. I am willing to take it as a token of energetic thought and fervent sympathy. Secondly, money is required. It is for the Opposition and the Government to put their heads together and find the money. The money can be found. It is there. It is there for the taking of it. It has not to come from outside sources. It has got to be released from the hidden crevices and secret corners. Let the Opposition throw light not on the same old familiar spots, but on these fastnesses and reserves.

OLYMPUS

(FROM OUR CORRESPONDENT)

New Delhi, Feb. 26.

In this land of sterile agitation and infructuous debating, the term, "hardy annual" is naturally in constant use. In fact, it too, has hardened with usage. But I wonder if the description is more apt in any other case than in this week's debates on the Railway Demands for Grants. And nothing made it more hardy than the attitude taken up by Sir Joseph Bhore throughout the discussions.

* * *

Whether it was the original statement on the budget or answer to critics on Indianisation of railway services or defence of the Railway Board against attacks on its policies, the Railway Member kept on quoting what he said last year. It cannot be that Sir Joseph Bhore has become bankrupt of ideas or of expressions ; nor can it be a belated claim to the role of a prophet.

* * *

That he overdid this device of quoting himself is the universal opinion ; that he cut no ice by so doing is equally true. What then? It seems to me that Sir Joseph Bhore is a tired man. He sees the sands of his official life running out. On 3rd April he would cease to be a member of the Viceroy's Executive Council. For such as he there is no reason either for fervour or candour in replies to a debate which, after all, is a hardy annual.

* * *

But he is entitled to support from his back benches with whom the position is different. Mr. P. R. Rau did not open his lips. Mr. Tylden Pattenson was all smiles and seemed most interested in all he heard. But his three day's membership ended without a maiden performance. Then came Mr. D'Souza, Director of Traffic. He did win the ear of the House and received numerous congratulations for the excellent maiden performance in demolishing the case of the European Group against Railways undercutting the shipping companies. But, as often happens with those who are applauded on their maiden efforts, Mr. D'Souza thought that he had really established a title to speak. So today he presented his labour "credentials" and talked big as a man who had risen from the position of a Guard to the "top." Well, he brought the whole Opposition down on his head and got hard knocks.

* * *

The sum total of the railway discussions therefore is that Government lost morally by exposing the weakness of its weak defence, and politically through a series of lobby defeats. In fact, the voting on railway supplies stands out for the largest voting strength against the government, and for inviting all the non-official parties against the Government, which is altogether without precedent !

* * *

Sir James Grigg was throughout an interested listener. Perhaps, he was a learner, too anxious to gauge the popular feeling on budget matters ; to note the tactics of the opposition, and its reactions to each argument on the Government side. He seemed, on occasions, provoked to get up but contented himself by passing on hints to Sir Joseph Bhore.

* * *

The real fight was on the 22nd, when Mr. Bulabhai Desai proposed refusal of supplies to the Railway Board. Sir N. N. Sircar won a tactical victory by winning a point of order raised during the course of that speech. But the Law Member made himself very unpopular with the Opposition. He does not mind it ; he is made that way ; but his act lent point to Mr. Ram Narayan Singh's remark that Indianisation of the kind, which put a Law Member in the position of authority was more dangerous to India's liberty than the lack of such Indianisation. Any way, the voting was heavy and government lost even its customary supporters like Khan Sahib Piracha and lost the vote by 75 to 47.

* * *

Then followed the biggest defeat so far inflicted on the Government, when Maulvi Shafi Daudi got through his token cut by 80 to 37 votes. The issue was the grievances of 3rd Class Passengers ; and even the European Group deserted the Government.

* * *

The Government fared comparatively better on the next cut moved by Mr. Govind Ballabh Pant for censuring the restoration of the salary cut. Mr. Jinnah's party remained neutral ; and the Government lost by 12 votes only. But the occasion provided the House with the only speech on Railway finance that it heard during the entire week. Mr. Pant has remarkable memory and he poured fourth a torrent of figures without reference to notes.

* * *

Mr. Pant's case was that compared to 1924 India had added 25% more capital and added similar mileage ; and the level of prices had come down by 55% and yet the Railway revenues had gone down by 10% and the cost of working gone up by 5%. The indictment remained unanswered. But Mr. Jinnah and his party vote on political considerations and not on the merits of the case. They did not want to be unpopular with Railway servants, and kept neutral.

* * *

The credit for mobilizing the large voting strength against government on any division goes to Mr. Aney, whose little party of 11 Nationalists raised the question of Indianisation of the Railway Services. Even though Europeans voted with the Government, the Opposition gathered 81 votes to Government's 44.

* * *

The European Group fared badly ; in fact too badly, over their protest against Railways "under-cutting" shipping companies. The only time that Government did make an effective case in reply was on this issue ; and Mr. Ghuznavi was particularly anti-British in his denunciation of the shipping interests. So the European group retreated and did not challenge a division.

* * *

Finally the "unattached" day enabled Mr. Joshi to have a comfortable innings. The grievances of railway employees found many a champion ; and a victory for their cause was easily obtained. This ended the first stage of budget debates and the House enters on 28th, the second stage of its "money" bill responsibilities.

* * *

As I said last week, Sir James Grigg's financial tale will be told tersely. That he will present a balanced budget and will distribute his surplus goes without saying. I do not see how he can get any taxation measure through this Assembly. Which means that as a wise man he should do whatever he can to give relief rather than impose fresh taxes.

* * *

This week has seen the publication of their Annual Report by the Posts and Telegraph Department. The pictures of an Air Mail plane and the laying of cables to Ceylon indicate that times are moving fast even for this Department, and the author of the Report did well by inserting these pictures. Perhaps, the only fault I can find is the absence of any special feature regarding telephone services, which are making such a progress and have for the first time yielded the Department a surplus of 3 lakhs. Both the Post and Telegraph services are in deficit and the telephones seem to be the only bright spot. But the telephone rates are still too excessive to permit of their use for social purposes.

OLD COURT HOUSE CORNER CALCUTTA

THE GATEWAY OF INDIA

(FROM OUR CORRESPONDENT)

Bombay, Feb. 28.

It has been a momentous week for the Gateway city. It has seen the inauguration of the first regular air service between Bombay and Calcutta, two of the most important cities in the East. Calcutta, with her plentiful supply of open spaces in the immediate neighbourhood, has actually been an important aerial port for a long time. But Bombay is handicapped by lack of space and aero-nautics has not yet evolved a method of aviation whereby a machine can take off within a narrow space. One hears, it is true, of successful experiments with autogyros that shoot up like a rocket and drop like an eagle. But they are still far from being a practical and commercial proposition. Bombay has been chafing under this indignity for a long time and the proposal for erecting an aerodrome and a landing stage on the Back Bay reclamation has been heard of frequenty of late. Now, thanks to the enterprise of Tatas, the leading industrialists of India, Bombay is going to have a regular air-mail connection with Calcutta. The possibilities, both political and industrial, of this venture can hardly be emphasized. Astute students of the market have noticed a certain difference in tone between the Bombay stock and bullion markets and those of Calcutta—a factor that tends to make for instability and insecurity. With Calcutta within a few hours' writing distance from Bombay, the markets will tend to be more uniform. And the air-service is sure to prove a boon to the business community of both the metropolitan towns who have perpetually to avail of the slow amenities of railway transport. And now that a start has been made, the question of an aerodrome and a landing stage in Bombay is sure to be taken up in right earnest. Let us hope that Bombay will be able to participate in the next race for the Melbourne Cup as a halting stage for the competitors and not merely share the thrills with other readers of the press.

But this is by no means all the sensation of the week. The princes and the ministers have been in conclave over the proposed All-India Federation and they came to the conclusion that an All-India Federation is unacceptable to them without important and radical modifications. The newspapers have described this news as a bombshell on London political circles. Indeed, it takes the wind out of the sail of those British politicians who were beginning to look upon the All-India Federation as a *fait accompli* and allowing it to be freely known that the Princes were being consumed with a desire to join the proposed Federation. To the layman and casual observer, there is something of a contrast between the attitude of the Chamber of Princes towards the propaganda cables of the Churchillite diehards and their attitude towards the proposed constitution . Sir Samuel Hoare, in his speech on the floor of the House in reply to Mr. Churchill's motion of adjourned, laboured the point that the point of view of the princes is not incompatible with their acceptance of an All-India Federation. This strengthened the suspicion that the British Government do not intend, even under a new set of circumstances, to deviate from their policy of pampering the Indian States. This must have been in the mind of Sir Austin Chamberlain when, in the course of his speech, he said, "let it be well understood that we are unwilling to allow this House to be driven from what it thinks right or to enter a Dutch auction for the support of the Princes." In any case, this is a fresh and important development ; and it remains to be seen whether the elastic principles of Mr. Ramsay Macdonald have, in this case, reached the limit of perfect recovery.

To come back to more local themes, the Bombay Council, on Monday, February 25, discussed a matter of vital importance to ryots and townsmen alike. Mr. Syed Munawar moved that the bill he had introduced at the last Poona Session to regulate moneylending business in the Presidency be referred to a Select Committee. His motion was eventually lost, but the discussion that ensued sheds some light on the divorce which Indian legislators often effect from actual facts. The way most of the Councillors stood up and expressed themselves glibly, yet with no evident conviction or sympathy either for or against the motion, points to the gulf that still yawns between the interests of Indian legislatures and those of India's teeming millions. Ask an unfledged stripling at school and he will, parrot-like, deliver the truism that India is groaning under the burden of debt and usury. And yet when legislators sit in conclave to devise a remedy for this incipient evil, their manner is strangely unreal and distant. We have unfortunately too many committees and enquiries and too little work. Mr. Munawar, in the course of his speech, mentioned that legislation on money-lending had been passed in the Punjab, United Provinces and Bengal. One can but express the pious hope that the burden of rural indebtedness which such legislation seeks to lessen, is being slowly removed. But the Home Member of the Bombay Government was not prepared to grant even the doubtful privilege of a resolution on the Statute Book. He said that the scheme was impracticable, that moneylenders could still easily lend, for instance, a sum of Rs. 100 and take a promissory note for Rs. 200 which means a little more perjury. There is, unfortunately, a great deal of truth in such a contention, but the Government should, in that case, declare itself unable to cope with the situation and give other methods a trial. One cannot draw much comfort from the Home Member's assurance that the Government are watching the results of the Punjab Act of 1930. It is time watching ceased and legislation began, for all the time the poor ryot, hag-ridden by merciless and usurious creditors, are in a pitiable state.

Turning to the more modest institution—The Council of the City Fathers—measures of benevolence were also discussed at the Bombay Municipal Corporation meeting on Monday. A Committee appointed by the Corporation went into the merits of each application for financial help and recommended a distribution of a total sum of Rs. 29,000 among 26 institutions as against the sum of Rs. 32,160 paid in the preceding year and obligatory grants-in-aid to different institutions amounting to Rs. 1,54,000. An amendment proposing a grant of Rs. 500 to the American Mission School was carried ; and an amendment seeking to do away entirely with voluntary contribution on the ground of financial stringency was lost. Monetary aid for needy, yet deserving, institutions certainly falls within the pale of municipal responsibilities. But the system is liable to considerable abuse ; and when the finances of the benefactor are alarmingly low, the utmost caution is necessary in making these benefactions. A Roger de Coverly Corporation may be popular ; but it must be heading, like the benevolent squire, for bankruptcy and ruin.

A-propos relief to the ryots, the cotton crop forecast issued by the Department of Agriculture raises serious considerations. Basing on an average for the past five years ended 1932-33, the total area under cotton in the Bombay Presidency and the Indian States excluding Sind is 26.8 per cent. of the total area under cultivation in the whole of India. The figures now published are the fourth forecast and these cover the early varieties sown in May and July principally in the Decan, and the late varieties sown in August and September principally in Gujerat and Karnatak. According to the figures given, the total area under cultivation is 3,471,000 acres in British India and 2,423,000 acres in the Indian States. Compared with the acreage for the corresponding period last year, this year's cultivation represents an increase of 2.4 per cent. but a decrease of 9.3 per cent. from the average figures for the last ten years. This increase in acreage is due partly to the seasonal rains both in the Gujerat and the Karnatak where absence of rain would have meant larger tracts being devoted to the cultivation

THE BUDGET AND LAND REVENUE

(FROM OUR CORRESPONDENT)

Madras, Feb. 26.

The provincial budget naturally claims pride of place in this week's review of developments in South India. It affords a welcome relief from the dreary eventlessness of last week. Not that this week is very much better. Barring the Budget, there is little calling for reference in these columns. But the Budget is, indeed, a lot. In Madras, unlike most other provinces, it has a deeper significance for the people. To the people of Bengal, for instance, the annual budget is a matter of little moment. With Meston as the handy scapegoat of every act of financial imprudence, the Bengal Government have gone on merrily with a stable deficit of two crores a year ; and last year they made of this deficit a shock tactics to which Sir George Schuster became a ready victim. And now, the effect of that threat to drown in deficits is the allotment of half the jute export duty. Even so, Bengal has a goodly deficit ; and demand for increased expenditure or reduction of taxes is thoroughly out of court. Not so with us. Though Madras had its share of revenue deficits during the dark days of 1931, the finances never altogether got out of conrtol. It is only in the current year that we are expected to be on the wrong side of the books. We have had a goodly provincial balance all through. We have even in recent times returned a part of the provincial loan. We have financed capital expenditure from the ordinary balance. And during the last few years we have had a mild trickle of surpluses to swell the closing balance.

All of which is no matter for enthusiasm. For the rest of India scans the budget too closely ; and the proposal of Bombay and Bengal to partition the income tax betwween themselves is a sign of their awareness of our financial fortunes. Truly, we are not happy in that we are overhappy. I wager Madras will ultimately lose in the impending wrangles over federal finance ! And if she does, the blame must be laid at the door of these "surpluses" !

Even at home, this fractional excess of revenue over expenditure gives our finance members a Pharisaic sense of financial integrity. When they speak on the Budget, they speak like Pontiffs. They expatiate on the financial policy, on the long view and the near view, all of which are in the lost resort mere attempts to put off the importunate demands for remission of land revenue. It never occurs to our Finance Member that the question is not how the Budget may be balanced, but how the budgets of the people may be saved from toppling down. Mr. Keynes has immortalised himself by pointing out that balance in the Government's budget may be at the expense of balance in individual budgets. These are times when a little deficit may be risked in order to avoid driving the people to insolvency. What need, we ask, to finance capital expenditure from the revenue balances, when the latter might serve to tide over the present crisis and enable a remission of land revenue. The aim of Sir Hopetoun Stokes, as he has repeatedly asserted before the Council, is to give the new reformed constitution the most favourable start. The assumption he has made is quite obvious. But the incoming Finance Minister can be in no doubt as to which of the two would be more helpful to him, a small balance in the Treasury or a prosperous people. But the Government claim that all the statistics in their possession go to prove that the case for remission rests on an exaggeration of agricultural distress. Of all monopolies, the monopoly of facts is the most hateful. One would wish that all these data were published to face the ordeal of a public scrutiny.

The position in regard to land revenue, with which alone I propose to deal, the others being, more appropriately, matter for editorial comment, has been fully explained by Sir Hopetoun in his Budget speech.

Readers of these columns are acquainted with the communique which the Government recently published on this question setting down the reasons which impelled them to reject the recommendation of the Council for the remission of land revenue by 33⅓ per cent. ; and the Finance Member has declined to go over the whole ground again. What he has done is to recapitulate what has been so far done by the Government in the matter of affording relief to the agriculturists, and the extent to which this relief has caused sacrifice of revenue on the part of the Government. The following table has been prepared by the Finance Member to show what the Government have agreed to forego of the amounts normally due to them as land revenue :

Fasli years	Total	1932-33	1933-34	1934-35	1935-36	1936-37
	Lakhs.	Lakhs.	Lakhs.	Lakhs.	Lakhs.	Lakhs.
1342 ...	33.38	10.71	...	...	...	...
1943 ...	61.62	22.67	41.51	20.11	...	...
1344 ...	55.51	...	...	48.06	7.45	...
1345 ...	54.69	...	...	...	45.86	8.83
Total loss for faslis 1342—1345	205.20	10.71	64.18	68.17	53.31	8.83

On the basis of the financial years, the revenue has been reduced on account of the remission by sums amounting to Rs. 10.78 lakhs, Rs. 64.18 lakhs, Rs. 68.17 lakhs and Rs. 53.31 lakhs in each of the year 1932-33 to 1935-36. It seems to be implicit in the Finance Member's treatment of this question that the concessions that have so far been made and have been proposed for 1935-36 represent the utmost that the Government could do in this regard, consistent with the claims of other considerations on financial policy. The virtue of the figures specified lies in the fact that remission of revenue to that extent has not prevented either a certain rate of progress in the expenditure on Part II schemes or the restoration of the equilibrium of expenditure and revenue which was disturbed so violently during the early years of the depression. There can be no doubt that Madras is almost the only province to preserve a certian degree of financial stability during this trying period. It is, indeed, a great achievement during all these years, in which other provinces have been either incurring heavy deficits or restricting outlay on productive expenditure, that we have had only two years of revenue deficits, one of Rs. 105¾ lakhs in 1930-31 and another of Rs. 19.04 lakhs expected in the current year. No one would think of denying the Finance Department the credit that is due on this account. But the people are entitled to ask whether the remission of land revenue cannot be effected now, as a temporary measure, without prejudice to the policy of preserving over a period a balance between revenue and expenditure. The Finance Member has disposed off in too light-hearted a manner, the contention that the remission could be only temporary. It is an unwarranted reflection on the Council, and the province as a whole, that, when conditions warrant an increase in land revenue and when the budget position requires it, the Council will refuse to make the normal grant of land revenue. No country can escape the penalties of inadequate taxation. But to allow a remission of taxation at a time of extreme distress is only a question of adjusting the tax burden as between the present and future generations ; and when we have had in the past a period of considerable surplus enabling even a return of loans taken from the central government, it stands to reason that we should allow ourselves some relief as a temporary measure.

Dr. SCHACHT'S SOLUTION

HOW GERMANY CAN HAVE IT BOTH WAYS

THE GOLD INSOLVENCY STANDARD

By Paul Einzig.

Amidst the excitement caused by the new French monetary policy, the American gold clause affairs and the London pepper crisis, we have been paying but little attention to Germany since the beginning of the year. And yet developments in that country are well worth following, not merely because Germany occupies an important position in the international economic system both as a producer and as a consumer, but because she is undergoing a most interesting experiment. Under the expert guidance of her economic dictator, Dr. Schacht, it is now being ascertained whether or not it is possible for a country "to eat its cake and keep it."

Strange as it may seem, the answer is so far decidedly in the affirmative.

The world outside Germany is divided into two large groups of countries. .The larger of them which includes Great Britain, the British Empire as a whole, the United States, the countries of the sterling Bloc and the countries of Central and South Eastern Europe and Latin America where the currency underwent a more or less substantial depreciation, tries to work out its economic salvation by sacrificing the stability of its currency. The smaller group, which includes the countries of the Gold Bloc, Spain and a few other countries, whose currencies are maintained stable in relation to gold, is prepared to sacrifice economic prosperity for the sake of monetary stability. Germany is the only country which has been trying, and by no means unsuccessfully, to get the best of both worlds. While maintaining the reichsmark at par with the gold currencies—in fact, the reichsmark has been at a premium in relation to the franc for some time past—the German Government has succeeded in bringing about a larger degree of trade recovery than most of the countries with depreciated currencies. It may be argued that the stability of the reichsmark is purely fictitious, since there are a variety of special currencies which are quoted at a discount, and which have replaced the official reichsmark in Germany's dealings with foreign countries to a large extent. The discount on these various special marks varies from 2½ per cent. for the sondermark to 62 per cent. for the security mark. It is argued that, in the circumstances, the contention that the reichsmark is at par can hardly be maintained. In reality, notwithstanding the existence of these special marks, the stability of the reichsmark is by no means a fiction. The proportion of trade transacted with the aid of these special currencies to Germany's total foreign trade is relatively small ; it is negligible, compared with Germany's total internal trade. To give Germany and Dr. Schacht their due, it must be admitted that they have succeeded in maintaining the stability of the reichsmark in spite of the depleted state of the Reichsbank's gold reserve.

How did Dr. Schacht attain this remarkable result? His monetary policy was aided by an utter disregard for moral considerations and by a high degree of economic discipline. Had the German authorities not been utterly unscrupulous in their dealings with Germany's foreign creditors, or had they lacked the power to enforce their economic policy which the existence of an unprecedented degree of discipline made possible, Germany would certainly not have been able to achieve trade recovery without sacrificing the stability of her currency.

In a recent statement, Dr. Schacht pointed out that the German example has proved the possibility of maintaining the stability of a currency without a gold reserve. He ought to have added that it is possible to achieve such a result, if the country concerned does not hesitate to default on its liabilities and to use every device imaginable to obtain fresh credits. The currency of the country, which has no adequate gold reserve, depreciates because of the excess of demand for foreign currencies by its national or by foreigners holding the national currency. Once the rule is established that the amount of foreign currency that can be bought in Germany is limited by the amount that is sold by exporters, the stability of the currency can be maintained almost indefinitely, provided exchange restrictions are enforced efficiently. Since June 1934, the goods delivered to Germany are only paid for, if there happens to be an adequate amount of foreign exchange available out of the receipts of exports. If there is an excess of imports, it remains simply unpaid. It is this system which was called very appropriately by Sir Henry Strakosch the 'gold insolvency standard." Once this system is adopted and made water-tight, it does not matter if German imports exceed exports, since the surplus cannot cause a selling pressure upon the exchange. Although the total demand for foreign currencies is in excess of the supply, the exchange rate is not determined by supply and demand ; the demand is simply cut down to be adjusted to the supply and the exchange rate remains unchanged.

Thanks to this arrangement, Germany can afford to have an internal boom without endangering the stability of her currency. In other countries, which are in the habit of paying for their imports, an internal boom of the extent witnessed in Germany would inevitably have led to the depreciation of the currency through the creation of a strongly adverse trade balance. Germany can, however, regard her adverse trade balance with equanimity, since the import surplus remains unpaid. She either simply defaults on her commercial payments or she concludes exchange clearing agreements, in which case her import surplus accumulates on the clearing accounts of the Reichsbank. Since it is becoming increasingly difficult for German importers to obtain goods without having to pay cash in advance, these clearing agreements are very useful as they provide a channel for importing without having to pay cash for the goods. As a result, Germany's import trade is being diverted to an increasing degree to the countries with which she has exchange clearing accounts. It is an unscrupulous way of accumulating trade debts without the least hope of paying for them ; but if the exporting countries are so anxious to sell that they are prepared to take a very high risk, they have only themselves to blame for the consequences.

It may well be asked, however, whether the world is prepared to supply Germany with goods on a credit basis indefinitely. Sooner or later, the countries with which Germany has exchange clearing agreements will realise that it is useless to increase the unclearable balance ; and exports to Germany will be restricted. It is argued that a stage will be reached, beyond which Germany will be unable to purchase abroad her most indispensable raw materials and food supplies. Since her price level is at present probably the highest among all countries, her exports are bound to fall off, and in the long run this will lead to an inevitable reduction of her imports. In reality, thanks to the existence of a high degree of economic discipline, Germany is, and will be, in a position to export a sufficient amount to pay for the imports she requires. So long as a number of countries are prepared to sell to her on a credit basis with or without the intermediary of exchange clearing

arrangements, there is no need for the German authorities to exert themselves to export more. If, however, all the channels of credit become blocked, the real test of the efficiency of the German system will come. Dr. Schacht will then be in a position to compel German exporters to export more, even at a loss. As it is, in many cases, manufacturers only obtain foreign exchange for raw material if they undertake to export a certain amount of goods. In order to be able to do so, they frequently sell abroad at a loss and make it up in the home market where conditions are sufficiently prosperous to enable them to charge higher prices. Such arrangements are at present the exception, but they can be made the rule. The Government can compel German firms to sell at a loss abroad a sufficient amount of goods to pay for the indispensable imports. In no other country except perhaps in Italy would the maintenance of such an artificial state of affairs be possible. In Germany, however, there is such a high degree of economic discipline that the effort of the Government to increase exports by such means would meet with no resistance.

It is largely the necessity of making such efforts that accounts for the curious anomaly in the trend of evolution in Germany. Politically, the country is moving, undoubtedly, towards the Right. The Left wing of the National Socialist party has lost its influence completely, and the Reichswehr is, undoubtedly, in full control. Economically, however, the country is moving towards the Left, to the same extent as if the Left wing of the National Socialist party were in control. Industrialists and employers in general are subject to Government intervention on an unprecedented scale. They can be compelled to employ more men than they require and they can be compelled to sell abroad at a loss. The dividends they are entitled to distribute are limited to 6 per cent. or 8 per cent., according to the case. There was a forced conversion of all municipal and mortgage bonds to a 4½ per cent. type. It is true that the transaction assumed the form of a voluntary conversion offer; but I would not envy the fate of those who declined the offer.

How is it that the military caste, which through the Reichswehr controls the destinies of Germany, tolerates such attacks on capitalism? The explanation is simple. The Prussian military caste, which before and during the war controlled Germany and which has resumed control since the massacres of June 30, 1934, never particularly liked the industrialists. Their spectacular development before the War threatened the supremacy of the military caste; during the War the industrialists made huge profits, while the military caste was at the fronts; after the War they benefited by inflation, while the old military classes became impoverished. Having now recovered their supremacy, they take good care to retain it not only against the destructive elements of the Left, but also against the rival conservative elements of the Right. What they have in mind is to develop a highly efficient military State. To that end, strong and prosperous industries are indispensable, but the military rulers of Germany take good care that the development of industries should be strictly subordinated to the requirements of the development of the military State. While private property is maintained —the Reichswehr would be the first to turn against anyone trying to abolish it—its use is being strictly subordinated to the needs of strengthening the military efficiency and economic resisting capacity of the Reich. The formerly all-powerful Krupps and Thyssens are now little more than paid managers in their own enterprise, which they have to manage in accordance with the Government's economic policy dictated by the Reichswehr through its nominee, Dr. Schacht.

London,
February 19, 1935.

AFTERMATH OF PFPPER CRISIS

DEMAND FOR ENQUIRY

CONFLICT WITHIN THE CABINET

By Francis Williams, city Editor,
The Daily Herald, London

Special for "INDIAN FINANCE"

(By Air Mail)

Practically nothing but pepper has been talked of in the City this week except for occasional intervals for renewed discussions of a Cabinet crisis.

As stated in my last week's message, names of people prominent in finance have been brought into the limelight in consequence of the fact that among the shareholders of James & Shakspeare, Ltd., the company which was the main operator in the pepper market, were included Mr. Reginald McKenna, Chairman of the Midland Bank, Sir Hugo Cunliffe Owen, Chairman of the British American Tobacco Co., and a finance company in which they are both interested.

Mr. McKenna has now denied that he was anything but an ordinary shareholder in the company and had no knowledge of its speculative operations.

The whole affair has, however, had serious effects on public confidence and has led to a long series of questions in the House of Commons.

Members of all Parties have, to my knowledge, now decided to press for a public enquiry with full publication of the names of all people concerned in the operation.

At the same time, there is likely to be strong demands for an enquiry into the position in other commodity markets and a control in speculation there.

This is likely to affect particularly the tin market, where a campaign is growing up against the operations of the Tin Restriction Scheme and the buffer pool which exists to take up stocks with the avowed intention of stabilising prices.

A number of members of Parliament are taking the line that in actual fact this means the control of the tin market very largely by one group, the Anglo-Oriental Mining Corporation of which Mr. Howeson, one time a large operator in the jute market in India, is the head.

I should say that all commodity markets are likely to be very disturbed for a considerable period. This is likely to affect the shares of commodity companies, particularly tin companies.

While the talk of a political crisis has died down temporarily, following a re-assuring statement from Mr. Baldwin, the present calm is more superficial than real.

There is, undoubtedly a considerable conflict within the Cabinet mainly around the question whether or no there should be a big public works campaign.

A General Election in the autumn is still regarded as highly probable.

Politics and pepper together have combined to frighten Continental holders of funds in London which have recently arisen to more than the 1931 total.

As a result, there has been a substantial withdrawal of these funds and a decline in the value of the £1, despite operations by the Exchange Equalisation account. It will be recalled that I suggested in an earlier message that such a decline was highly probable.

I think the £1 is likely to continue weak despite the Exchange Fund's support. In view of the U.S. Supreme Court's decision on the gold clause, speculation is likely to be mainly in American securities for the time being.

OVERSEAS' NEWS: By Air Mail

GREAT BRITAIN

THE LAST LAP

The last few weeks of the financial year are generally given to speculation and anticipation regarding the next budget. With only seven more weeks to run, these speculations are already greatly in evidence. And one hears in all quarters discussions about the probable nature of the next Budget. But the indications so far cannot be said to be very hopeful. Receipts from income tax and sur tax are continuing to come in large quantities. But in view of the fact that payment in the current year is at a rate of 6d. less than a year ago, one cannot look forward to any very large improvement under this head. Calculating up to middle of February, there is still a deficiency of £47,965,775 to be made up compared with a deficiency of £24,111,434 at the corresponding period a year ago. The prospect of a surplus at all resembling the handsome figure of £31 millions last year are very remote.

It is true that certain extraneous factors swelled last year's receipts, specially the windfall in the shape of the Death Duties on the Ellerman estates. And the increase under this head was more or less accurately anticipated in the Budget to be in the neighbourhood of £7 millions. Customs and Excise also have not fulfilled their earlier promise. The miscellaneous receipts have so far totalled only £12,788,970 and thus falls short of estimate by a considerable amount. Besides, the grant of subsidies have put further strain on the Government's resources. It has practically been a subsidy year and the Government probably consider themselves safely entrenched behind the contention that general relief to the tax-payers cannot be afforded on account of these special reliefs that had to be granted to depressed industries in the national interest. But the matter-of-fact and unimaginative Britisher may fail to endorse governmental altruism at his expense.

Unemployment Increasing.

It may safely be asserted that the confidence of the country in the methods and even in the manners of the National Government is properly shaken. The Wavertree bye-election, as I pointed out a week ago, is an index of the extent to which such dissensions have increased. When the question of reconstruction of the Government comes up, the factor, that will greatly shape the future of the Cabinet, is, as always, the question of unemployment. Mr. Lloyd George also has made it the chief plank in his platform. And this new deal may be said to be based on the prospect of better state of employment in the country. The January return of the Ministry of Labour further exposes the hollowness of the policies with which the Cabinet tried to placate the ranks of the labouring classes. For the month ending the middle of January, there was a decline of 195,000 in numbers employed and an increase of 239,558 in the numbers unemployed. The unemployment total is now well past the traditional two million mark, the actual figure being 2,325,273.

The Government, as usual, have put forward innocuous explanations of this increase. But notwithstanding all the unkind things said about the English weather, it is unfair to lay all the blame on seasonal causes for the insistent accelaration of the evil. The unemployment on the Building and Public Works Contracting Industries increased by almost 43,000 and it is put down as due to the inclement weather conditions. The distributive trades were also worse by 39,560 and smaller increases in unemployment occurred in Transport, Dock and Harbour Services, Printing and Tailoring, Cotton, Wool, Hosiery, Engineering, Electrical Apparatus and metal goods manufacture. One would almost imagine that a year in England consisted of 365 days of London Fog when everything is at a standstill.

Windfall for the Southern.

At a time when the Stock Market is agitated over the pepper crisis, it is gratifying to note that at least one class of stocks is distinctly on the upgrade. The decision of the railway amalgamation about the assessment under which the property of the Southern Railway is rated, is sure to affect favourably not only the Southern Prefd. stock but also other railways stocks and shares. The Commission have reduced the Southern Railway Assessment from 2,180,000 to £1,077,131. This means not only an immediate refund to the Railway concerned of nearly £360,000 due to over assessment for the last four years but also a refund of something like £1,440,000 to which the Southern would be entitled, from its contribution to the Railway freight rebates funds for the subsidy of certain classes of traffic, notably, coal for export and for use in Iron and Steel Works. But this is not all the implication of the important decision of the Railway and General Commission. This decision foreshadows similar rulings for the other railways and in course of time, the L.M.S., L.N.E., and the L.W.R., may come in for substantial refunds. It would also mean substantial saving for the railways, sufficient to cover 1¼ per cent. on L.M.S., 4 per cent. preference, one per cent. on L. & E.R., 2nd preference, one per cent. on Great Western ordy. It would, therefore, seem that the prospects of the railway stocks and shares have considerably brightened on account of this important decision.

One likes to hark back again and again to the intriguing political situation in the country. If it be a true saying that coming events cast their shadows before, the Prime Minister and the "National" cabinet must have reason to look upon the coming general election with apprehension. The country is not only waiting eagerly for delivering its verdict but there are clear indications of what that verdict is going to be. Even if the "National" Government is given another lease of life, not a very likely contingency, it will have to be re-shuffled and completely reformed. Stalwarts of the present and the previous cabinets may be relegated to the back benches and old and treid politicians may stage a "come-back." Those, who want to salvage the wreakage, are suggesting an immediate compromise with powerful personalities like L.G. "Do it now, do it to-day" they say, "or else all is lost." Even *The Times*, which is most in the confidence of Cabinet ministers, is openly condemning the present Cabinet and the Premier in terms which do not lend themselves to any equivocal interpretation.

It is really tragic that a man of the promise of Mr. Macdonald should end by becoming a shuttlecock politician to be bandied from the Labour Party to a coalition cabinet and from the coalition cabinet back to where? That seems to me the crux of the problem. Granting that the "National" candidates come unstitched in the next election and that the labour party captures a working majority, what will be exactly the designation of Mr. Macdonald in party politics? Will he renew his allegiance to his erstwhile comrades whom he tried to browbeat as the head of the "National" Cabinet? Will he still be loyal to his short acquaintance of the "National" regime? Or will he try his last chance by embracing the tenets of the emasculated liberal party who seem to be staging a come-back? Mr. Lloyd George's "New Deal" and the reception it has got indicate that supporters of such economic reconstruction shall fare well at the polls at the general election. It is already being whispered that L.G.'s New deal is identical in every detail with an official "New Deal" which was to be announced and that the wizard of Llandudno somehow divined it and stole a march over the cabinet by proclaiming it to the country.

It looks almost like a gesture of compromise with the "New Dealers" and compromise is the chief humour in Mr. Ramsay Macdonald's composition.

But how is he going to explain away the persistent phenomenon of rising unemployment? He confessed hhimself surprised at the unemployment situation; but the country is surprised that the Government still persists. He successfully scared the people into accepting a "national" government which was going to save the country and avert the crisis. But the country is now scared of him and slowly the unuttered resentment is taking shape. It should not be surprising if one of the slogans at the next general election should turn out to be "Macdonald-must-go."

GERMANY

STANDSTILL CONFERENCE AGAIN

The problem of Germany's short-term credits, relegated, comparatively, to the background all these months, has again come to the fore. The Standstill Agreement that was reached in February 1934, was for only one year and the Agreement is to lapse this month unless renewed for a further period. The new year's Standstill conference has, therefore, assembled this week in Berlin to consider the question of giving a further lease of one year to the old agreement with suitable modifications.

That there has been practically no complaint from the foreign creditors all these months as regards the liquidation of debts covered by the Agreement is sufficient proof that the Agreement has been working very satisfactorily. The main items of credit covered by the Standstill Agreement are short-term credits, not in terms of Reichsmarks, such as acceptances, time money, cash advances etc., which the foreign banks have lent to German banks for *bona fide* industrial and commercial enterprises. The short-term debts of the States and municipalities and the call money loans and seasonal regular credits, are not, therefore, included in the items covered by the Standstill Agreement. The agreement originally reached in the autumn of 1931, was only an emergency instrument intended to operate for a few months; but this was systematically brought into form only from 1932, whence the period of its operation was extended to one year on each occasion. The most important conditions under which the foreign banks, declared themselves ready to maintain these definite lines of credit in 1931, have, on the whole, continued up to now. Interest payments on standstill credits have been made regularly since July, 1934; and similarly the special guarantee obligations of the Gold Discount Bank have also been met systematically.

The following table, taken from the weekly report of tht German Institute of Business Research, gives clearly the progress that Germany has made towards liquidating the outstandings:

SHORT-TERM FOREIGN DEBTS IN GERMANY

Figures in 1,000 million Reichsmarks.

End of month	Total short-term indebtedness	Theoretical Standstill Credits		
		Total	to banks	to industry and trade
July 1931 ...	13.1	6.3	4.1	2.2
November 1931 ...	10.6	5.4	3.7	1.7
February 1932 ...	10.1	5.0	3.4	1.6
September 1932 ...	9.3	4.3	3.0	1.3
February 1933 ...	**8.7**	**4.1**	**2.8**	**1.3**
September 1933 ...	7.4	3.0	1.8	1.2
February 1934 ...	6.7	2.6	1.6	1.0
July 1934 ...	....	2.3	1.4	0.9
December 1934 ...	....	2.0	1.2	0.8

It will be noted from the above table that during the past four years the total standstill debts have been reduced by about Rm. 4,300 million and at this rate of progress, Germany, can well be expected to eliminate the debts altogether in the course of next two or three years. Such speedy liquidation of the vast amount of debts is to be accounted for, partly by the shrinkage of foreign trade and partly by the conversion of the debts into Reichsmarks and also by the "unavailed of lines"; since the existence of the standstill agreements about 10 to 12 per cent. of the credits have not been utilised at all. At the end of 1934 the used up credits amounted to only 1,700 million Reichsmarks against a theoretical credit of 2,000 millions. At the present time, on the eve of the opening of the new standstill conference the unavailed of lines amounted to 283 million Reichsmarks or approximately 13.7 per cent. of the total credits. This is, of course, due to shrinkage in foreign trade with consequent rise in the so-called "open lines." Conversion of credits into Rm for financial additional exports and tourist traffic accounted for the liquidation of the outstanding debts to the extent of some 300,000,000 Rm. during the first half of 1934.

This, in brief, is the position of the standstill credits on the eve of the beginning of the conference presided over by Mr. F. C. Franks. The delegates from the various countries are those who have already attended the previous conferences in Germany with the exception of one or two. This is a very valuable feature, in that it enables the delegates to understand the position and appreciate the needs of both the creditors and the debtors. The conference has already been in section for the last three days ; and it is expected to conclude its labour, for the year by the end of next week or so. As usual the demands have concentrated on the further reduction of the outstanding credits including the "unavailed" of lines, and the special payments to be made by the Gold Discount Bank. The Bank payments were extended last year by another year to February 28, 1935. The creditors now demand that the instalment payments falling due under the guarantee of the Gold Discount Bank shall be satisfied by cancelling unavailed of portions of credit lines. Cancellation of the credit lines not guaranteed by the Gold Discount Bank against a simultaneous release of the bank from a corresponding amount of guarantees has been insisted on by the creditors before the Agreement can be renewed for another year. Payment of the banking creditors in reichmarks instead of Gold discount bank certificates is also stipulated as a condition for the new agreement. The American creditors are particularly concerned in increasing the use of registered marks for financing additional exports from Germany and tourist traffic. A number of technical improvements in the working of the agreement also figure in the demands set forth by the creditor delegates.

The debtor's position has been very ably explained by Herr G. Schlieper, who has issued a statement which lays emphasis on Germany's unfavourable exchange position. Dr. Schacht had already explained Germany's viewpoint in the previous standstill conferences in unmistakable terms and Herr Schlieper will, therefore, have nothing but to give certain touches in the light of developments. Already Germany has paid back about 2,500 million Rm. of standstill credits in the form of foreign exchange. By the end of 1934, the foreign exchange position has become definitely worse than it was in the beginning, so that it is hardly possible to effect any reduction. The commodity trade of Germany for 1934 showed a debit balance of 284,000,000 Rm. Nor was the position of the service balance any better. In spite of the postponment of transfer, the debit balance of the current items of Germany's balance of payments was about 550 million Rm. Even if it was possible to find exchange, a reduction would probably result in discrimination towards

Air Mail Week

some of the creditors, namely those owing no amount or only small amounts of unavailed of lines. The unavailed of lines of the American creditors aggregate to 18 per cent., those of the British 17.7 per cent., those of the Dutch 5.8 per cent. and of the others much lower. An equal cut is wellnigh impossible.

There is another feature in the foreign trade figures of Germany, apart from their unfavourable position. The export figures in many cases are only nominal, from the standpoint of standstill credits, inasmuch as there is no income of foreign exchange from them. For some of the imports, the Reichsmarks could only be paid into the Reichsbank but not transferred. These serve only to adjust the balance of amounts nominally, without in any way increasing Germany's ability to pay. It has, therefore, been necessary for Germany to reduce, as far as possible, other debit items in the balance of Payments. And the most important item is the interest payments, which between January to November 1934 amounted to 45 million Rm. Reduction of interest has been the main concession sought by Germany in the New Year's agreement.

At the time of writing, the discussion in the conference tends towards a sympathetic consideration of the debtor's case, and all things indicate that the interest rate will be reduced on the average by about ½ per cent. This is only in tune with the recent reduction in the interest rates in the German long-term bond market, so that foreign debtors will naturally have to revise their demands under this head. It is estimated that the reduction of ½ per cent. would mean a relief to the German foreign exchange situation by about Rm. 7,000,000 per annum. The cut will affect only the American creditors, as it is only their credits that are at present over the rates current in the German market. The British credits are already well below the maximum rate. There is also general agreement in principle on certain cuts in interest on cash credits to German banks to 4¼ per cent. and to German industrial and commercial undertakings to 5¼ per cent. An exception, it is stated, will be made in the case of Swiss credits, as it appears that the cost of these will be so heavy that the Swiss banker considers that a cut in the interest rate would mean very heavy load. The reduction of the unavailed credit lines will be effected by cutting the so-called "dead lines" which cannot be used again and which now amount to Rm 140,000,000. With regard to the handling of the register marks no changes are expected that are worth mentioning.

CHINA

MONETARY CRISIS AHEAD

President Roosevelt's monetary experiments in the New World have been causing many repercussions in distant lands. Not long back, the heavy shipments of gold from France, at a time when the political situation in Paris, was anything but calm, created apprehensions in the minds of even the most orthodox financiers about the stability of the franc. Great Britain is constantly watching the movements of the dollar exchanges with anxious interest. Far away in China, the silver policy of the American President, has been responsible for draining away the national wealth. The Chinese money market had never taken kindly to this American attack. The continuation of the silver purchase policy has now precipitated the monetary crisis that is developing in China. The delay in the announcement of the decision of the gold clause, has caused much disappointment but this scare has created an extraordinary appreciation in the value of the dollar. The foreign exchanges have moved well over gold export points and the dollar has come to be the much valued possession that is madly sought after. To check this rise in the dollar, the American Authorities entered the market as purchasers of gold currencies for conversion into gold and silver bullion including currencies. It is this increased purchase of silver that has now precipitated the crisis in China. Statistics issued last week by the Department of Commerce of the U.S.A. show that imports of silver into America for the week ended January 25 amounted to $8,405,797, compared with $5,097,710 in the previous week. Last week the imports included $468,354 of silver from Honkgong.

In addition to the encroachments into the silver reserve of China, the internal conditions in the country tended to accelerate the crisis. The country as is well known, is on a silver standard with paper currency bearing a fixed proportion in value to the white metal. There has for some time been a stringency in the Chinese money market due to the vigorous deflationary policy followed by the Chinese Government. When the silver purchasing policy of the American Government began to draw enormous quantities of silver from China, the stringency all the more increased with the result that the disparity between the typical value of the metal and the market value became wider. To preserve the stability of the currency, it had become increasingly essential for the Chinese Government to prevent the flight of silver, and the embargo placed on the export of silver while tending to mitigate the evil for the time being, did not prove to be a permanent remedy. Due to increased purchases of this metal by the U.S.A. Government and the rise in the prices of silver, the flight continutd. To add to this situation, the New Year dawned with a heavy demand for silver both from the people and from the merchant community. This resulted in a large encashment of notes and as there is not enough quantity of silver to meet the demand the banks had to close down. Merchants were unable to collect debts as the native banks are hard pressed for cash. The latest closing is the Yee-Kong Bank, the liabilities of which, though not known, are estimated to be considerable. Another Bank is able to tide over the difficulties, as one rumour would have it only with the help rendered by several sister banks. Merchants feel very nervous and before the next week many bank failures are anticipated. Chinese and foreign banks alike are short of funds and the only relief that could be had is by converting foreign credits into cash and repurchasing similar credits forward at fabulous rates of interests ranging from 10 to 30 per cent. China is thus in the horns of a dilemma. Forces beyond her control are operating against her. Any help that foreign countries can render will be gladly welcomed but as things are, both Great Britain and America are standing aloof. Far from any help in the shape of a substantial loan, there is every possibility of the silver purchasing policy being continued at the same vigour. There is Japan who may come to the assistance but until now there has been little or no sign.

Failing help from outside, China will have to depend on her internal resources. The Ministry of Finance at Nanking has decided to set up an advisory Committee to enquire into financial questions. What the Committee will do towards improving the Chinese currency system will, therefore, be of considerable interest. Will it follow the N.R.A. model of nationalising all stocks of silver and fix a new value of the currency in relation to bullion or will it recommend for the complete suspension of the convertibility of the paper money and issue inconvertible paper money? All these problems will have to be tackled by the new Finance Committee and it is worth while watching developments.

FINANCE ABROAD

(*Continued from page 675*).

countries and that Holland had declared her intention to reserve such liberty for herself unimpaired. Even more significant is his statement: "We do not know for certain whether the gold countries will remain together." The non-gold countries have never been in any illusion as to the solidarity of the gold bloc. When, in the middle of 1934, they met to consider the measures they should take in defence of their currencies, all that they were able to achieve was the passing of a resolution that common endeavour should be made to increase the volume of the trade among the gold bloc countries by about 10 per cent. And what is more, France was found to be unwilling to extend to Belgium the financial help that she so clearly needed at that time for protecting the Belga.

The second statement of Mr. Colijn, therefore, is also an affirmation of the obvious. But such a confession coming from one, who might well be considered the founder of the gold bloc in the World Economic Conference, clearly points to the possibility that the gold bloc countries will begin to fall off one by one. At the moment, however, they are casting longing, lingering looks on the advantage of deciding their monetary policy after Great Britain and the United States have stabilised sterling and the dollar. There can be little doubt that these countries will refuse to oblige the gold bloc nations in this manner. The question will, therefore, reduce itself to one of balancing the advantage of waiting for the stabilisation of the dollar with the strain that has to be undergone now owing to the continuance on the gold standard. Considering that Great Britain for her part has no special and imperative need to stabilise sterling, and the United States are quite satisfied with their present monetary policy, it will soon be found that the gold bloc countries have no real choice left to them. If, in accordance with this view, there should be loss of confidence in regard to any of the gold bloc currencies, there might be a flight to the pound, which will more than counteract the present bearishness in the outlook of sterling.

GATEWAY OF INDIA

(*Continued from page 705*)

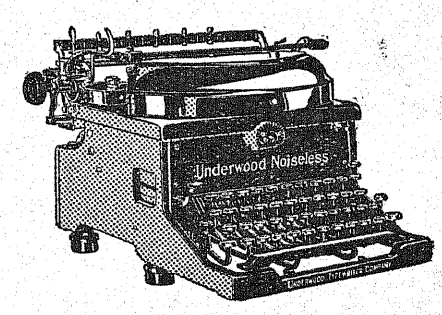
of groundnuts. The total expected yield from this increased acreage is, however, not gratifying. The estimated outturn in north Gujerat may range between 25 to 30 per cent. of the normal level whereas in the South it may come to about 70 per cent. in the prosperous districts, but only 55 to 60 per cent. on an average. Taking the presidency as a whole the return this year is only 15.2 per cent. of what it was last year.

These figures speak for themselves. The decrease in the estimated yield despite the increased acreage is accounted for chiefly by the frost in January. Gujerat was the worst affected area and the early sown variety in these parts were heavily damaged while the late sown variety in these parts were heavily damaged while sowns which were in the boll-formation stage were completely destroyed. When the last forecast was issued in December 1934 the total yield was estimated at 65 to 85 per cent. of the normal level but as a result of the damage the yield has come down to 25 to 30 per cent. Nor are the Southern districts any better off. The deficient rainfall has adversely affected the late sowings in the Deccan districts. And what the failure of the monsoons left undone the intensity of the frost completed. Under the circumstances, there is abundant necessity for relief for the agriculturists of the Presidency and it is time something constructive was done instead of legislators and Councillors frittering their powers away in bootless discussions and speeches.

Don't strain to hear every word above the noise of your Secretary's Typewriter.

Quiet typing HELPS CLEAR THINKING

The new Underwood Noiseless is durable and reliable. It is manufactured complete in the World's largest typewriter factory, and carefully adjusted and inspected by Underwood Craftsmen. It will give long and efficient service and create that pride of possession which always comes from owning the best.



With the Underwood Noiseless it is possible for you to conduct your business in an atmosphere of quiet refinement. The typewriter noise is eliminated. It cannot disturb conversation or concentration.

CALCUTTA

JUTE AND JUTE GOODS

JUTE

Calcutta, Feb. 28.

As anticipated in the last week's report, raw jute market was very easy in the beginning of the week. As a consequence of long bull liquidation, price for March futures dropped to Rs. 30-12, although a small recovery has taken place towards the close of the week and quotations are Rs. 31-6. There was not much business done by the mills, and shippers were likewise out of the market. Buyers were interested at Rs. 3 per bale ; sellers asking annas four more.

Reports are coming from the jute growing area that the Government measures for reduction of sowing are taken very seriously and that the curtailment is likely to be as much as desired.

June futures are quoting at a premium of Rs. 2-6 over the March futures and there are buyers at this premium. It is anticipated that the premium might increase further. The tone at the time of writing is steady but quiet without much business passing.

With regard to the introduction of a new grade in the loose jute business in October last, the Committee of the Bengal National Chamber of Commerce have made the following representation to the Government of Bengal—

"The Committee, are reliably informed that the new mark has been devised by several purchasing concerns, who have definitely resiled from the agreement of 1932 on the plea of providing an opportunity for the disposal of flood damaged jute. In the opinion of the Committee, the plea can hardly be deemed a tenable one, for two obvious reasons. In the first place, the proportion of the amount of jute damaged by flood last year was insignificant—hardly one per cent. of the total output. Secondly, the flood was confined to a very limited area and could not possibly justify the enforcement of the new mark throughout the Province. The absurdities involved in the plea lead the Committee to suppose that the new mark has been devised to keep the price of loose jute at a depressed level or at least to prevent any appreciable rise in the price of the fibre. As the introduction of the new mark militates against the interest of the growers no less than the interest of the dealers, the Committee would urge upon the Government of Bengal, who have for some time been devoting themselves to the task of devising ways and means for raising the price of jute and have already embarked on a crop restriction scheme with this definite object in view, to pay due attention to the undesirable reactions of the alterations in the standards in the loose jute market in Calcutta on the entire jute trade and, incidentally, on the economic well-being of the whole Province and take necessary action, legislative or otherwise, to save the trade from the baneful effects of changes in the marks."

JUTE MANUFACTURES

Calcutta, February 28.

Steady but quiet conditions have prevailed in the hessians market during the current week. The highest and the lowest quotations for ready nine porters were Rs. 9-5 and Rs. 9-1 respectively. Early in the week following the decline in jute the market was easy, but the ease was only short-lived and on fresh buying enquiry prices again rose to Rs. 9-5. The activity was more noticeable in case of ready goods. About a week ago, ready hessian was quoting one anna lower than May position. At the time of writing the conditions were quite the reverse. Ready now stands at a premium of one anna over May. The view held out last week that purchase of hessian taking Rs. 9 as a bottom basis will always prove advantageous for the time being is re-iterated.

Early in the week there was not much enquiry for heavy goods. But towards the close the enquiry was fairly good and a steadier tone prevailed with prices tending higher. Business on the whole was confined to only near covering. The position of the market on the whole is steady.

Total reported sales for the week ending Saturday the 23rd February, 1935.

COTTON AND COTTON GOODS

COTTON.

Calcutta, February. 28.

Caution was the main feature of the market in Bombay. A likelihood of the increasing daily scarcity of Broach contracts has stffened the market: but unfavourable advices from abroad act as an effective check. Neither bulls nor bears are in an aggressive mood.

Business in Broach cotton for the April-May contract started at Rs. 247-8, which declined by 4 As. during the initial stage. Scattered buying, however, appeared at this stage, and the rate gradually moved up to Rs. 248-8. A quiet tone prevailed thereafter, professional trading being the chief feature.

The opening rate for the May option in Liverpool, though expected to be five points down, was 6.81—04, which later improved to 6.82—03, the sterling-dollar rate in London being then quoted at 4.86¼. The local rate thereupon improved to Rs. 248-12. The Liverpool rate reverted to the opening level, while the cross-rate eased to 4.85 15/16. The local market was, however, practically unaffected.

The New York Cotton Exchange Service estimates world consumption of American cotton during December 1934 at 916,000 bales compared with 1,007,000 bales in November 1934 and 1,025,000 in December, 1933.

Total world stock of American cotton on December 31, 1934 is estimated at 15,407,000 bales by the same authority compared with 18,421,000 bales respectively on corresponding dates in 1933 and 1932.

Says the **Osaka Mainichi** during mail week: "It has recently been brought to light that the Japanese spinners must buy well over 2,000,000 bales of Indian and American cotton to cover their 1935—36 needs. It is estimated that Japan has so far contracted for 800,000 bales of American cotton and 500,000 bales (including 100,000 bales of the old crop) of Indian cotton, and that the volume Japan must buy from now on will reach 1,000,000 bales of Americans and from 1,300,000 to 1,400,000 bales of Indian cotton. It is in consideration of this need to buy more cotton and the decline of their stock on hand that is making the first class mills, especially the Kanegafuchi, Toyo and Nihon unwilling to dispose of their product in a hurry."

New York reports heavy selling last week-end, nervous bulls having unloaded their holdings freely. The uncertainty of the American situation cause an uneasy feeling and sellers were active, with prices registering a closing loss of half a dollar per bale.

The effect of the gold clause decision has worn off. The rate for May option which stood at 12.48 prior to the announcement of the gold decision, soared up to 12.65 on publication of the decision, declining subsequently to 12.40.

The Liverpool market maintains a steady tone, May option standing unchanged at 6.85. Buying was not prominent and in the absence of any element to stimulate demand, prices fluctuated within a narrow range.

Messrs. James F. Hutton and Co., in their weekly, market eport, dated Manchester, February 13, says:—

The general tone of the market has again been steady and prices show little alteration from a week ago. Recent developments in the political situation, and in the London Commodity markets are rather unsettling and traders generally appear to be waiting.

It is reported that more rain fell in the South-West and in the Mississippi Valley, but more moisture is needed in the extreme Western sections of the belt. It is interesting to note that according to one estimate the consumption of textile fibres—cotton, wool, silk, rayon—in 1934 fell 13 per cent. below that for the Calendar Year 1933.

Opinions differ greatly about the future course of values but the majority are inclined to a slightly bullish tendency. A good deal of price checking and tentative offering has been going on this last few weeks, but bookings all round remain disappointing. Generally speaking stocks in most of the markets must be running low, and replacements will probably have to be at increased rates.

A few low offers for *dhooties* have been under consideration for Calcutta and Madras. For Amritsar odd lots of voiles and fancies have been sold together with light bleaching styles for Karachi. Some inquiry for dyed and printed styles has been reported for both Bombay and the Up-country outlets.

The position in China remains very unsatisfactory. A small general inquiry has been received from Shanghai for poplins and fancies, but little actual business has gone through. Rangoon has booked both fine cambrics and voiles, whilst there has been a limited demand from Colombo for both white and grey shirtings.

Egypt and the Near Eastern centres remain quiet but a better trade has been done in high class prints and fancies for West Africa. The general improvement in South African business has been maintained, and some nice lines of drills and dress fabrics have been sold. South American demand tends to expand although in the majority of cases offers need improvement.

The final memorandum on the Indian Cotton crop for 1934-35 gives the following figures showing a decline of 14 per cent. on last year's figures:—

All-India Estimate

Oomras	1,475,000
Bengals	1,041,000
Dholleras	496,000
Broach	134,000
Americans	404,000

COTTON PIECEGOODS

Calcutta, February 28.

The apprehension that a change in the customs tariff in favour of Lancashire continued to depress the local market. The up-country demand is fitful and has not had a steadying effect.

A small business in Manchester dhothies and in certain fancy styles took place at prices on parity with ruling market values. Forward business is non-existent.

Indian mills failed to interest consumers, principally because they have not responed to the lower level of prices indicated by buyers, because of the high cost of the raw materials. Grey dhoties, grey shirtings and dyed fancies were sold in small lots.

Bombay reports the same situation. There was a sporadic demand for Manchester's standard lines. Japanese goods remained more or less steady. Forward business is difficult. The only encouraging feature was the increase shown in Bombay made shirtings and yarns.

BULLION

GOLD

Calcutta, February 28.

Gold recovered over the week end and has since maintained a steady tone, with an upward trend, corresponding to a similar movement in silver. Option dealers were conspicuous on the Bombay market, trading for April settlement having begun at Rs. 55-8-0 and improving to Rs. 55-8-9. At closing on February 25, Bombay price stood at Rs. 55-9-6.

Gold valued at Rs. 1,50,29,786 was exported from Bombay last week. The total amount exported from Bombay since Britain went off the gold standard is worth Rs. 221,91,524.

Value of gold exported from India from September 1931 to February 19, 1935, is approximately Rs. 21,900,000.

Total exports from United Kingdom during the week ending February 15, 1935, amounted to £3,143,000, of which £1,827,000 and £1,159,000 were shipped to the United States and France respectively. Total imports into United Kingdom during the same week amounted to £3,097,000, to which France contributed £1,052,000: Africa £658,000: India 524,000 and Egypt £541,000.

Continued large gold arrivals in New York are, it is reported, proving embarrasing to the Administration and an attempt is being made to find a way out by offering gold for currency stabilisation on terms.

On February 22, gold touched a record price in London of 143 shillings 3 pence an ounce, a rise of 7½d. over the previous highest rate on October 11, 1934, due to weakness of sterling in terms of franc.

SILVER

Calcutta, February 28.

Very steady conditions have prevailed in the market in anticipation of the reduction of import duty. Uptill now the view, was that a reduction of Rs. 5-13 per 100 tolas is likely to take place. In expectation of this, the ready silver was at a discount of Rs. 5-14 over Fagun settlement. For the last two days there has been a further decline in ready and the disparity has come to Rs. 7. A big bet is reported to have been made between a Bombay merchant and a group of Calcutta dealers, the former being for the reduction of Rs. 5-13 and the latter for Rs. 7. The bet is said to have run to good few lakhs of rupees. Fagun settlement is ruling at about Rs. 69-8 and it is believed that if the duty is remitted ready position will also soon improve. A reduction of the duty from 5 to 2 annas an ounce is announced.

The weight of silver bullion imported into and exported from United Kingdom in January 1935 and the comparative figures for the same month last year are :—

Imports	Jan. 1935 (weight in ounces.)	Jan. 1934
Total unrefined silver ...	4,263,000	3,729,000
Total refined silver ...	6,275,000	5,595,000

Total refined silver ...	27,308,000	4,754,000
Total to China	nil	nil
Total to India	233,000	537,000

Total exports from United Kingdom during the week ending February 15, 1935 amounted to £638,000 of which £582,000 worth was shipped to United States. Total imports during the same week amounted to £320,000, of which Hongkong contributed £88,000 and Japan £61,000.

2032 ingots of silver valued at about Rs. 35,83,993 were shipped per s.s. Kaisar-I-Hind on 16-2-35 to London on Government of India account.

500 boxes of British silver dollars valued at about Rs. 12,05,000 account Hongkong and Shanghai Banking Corporation were shipped to Hongkong per s.s. Behar which left on 17-2-35.

SUGAR

Calcutta, February 28.

Messrs. Bird and Co.'s report February 23 is as follows :

Prices for Java white at importing centres closed as under :—

	Ready Rs. A. P.	Forward Rs. A. P.
Calcutta	9 8 6	9 8 6
Bombay	9 14 0	9 15 6
Jamnagar	9 7 6	9 8 0
Bhavnagar	9 7 6	9 8 0
Karachi	9 13 6	9 12 0

Calcutta

Stocks of Java white are now reported to be as low as 1,200 bags and this low stock-position has been responsible for keeping prices steady inspite of the very poor enquiry due to the decline in Indian sugar prices. The general tendency of stock holders is to sell gradually before the arrival of named steamers while importers show no desire to sell below quotations in anticipation of an improvement in demand later on. Enquiries for forward shipment are conspicuous by their absence and this condition is likely to remain until after the Budget announcement.

As regards Indian sugars, weak holders and speculators continue to endeavour to sell out their previous commitments at reduced prices and in consequence consumers are refraining from large buying in the hope of lower rates still. Enquiries for forward positions are negligible owing to the firmness shown by most factories who are asking for higher rates.

Bombay

The Java market during the week under review remained very quiet with an easier tendency, prices registering a decline of about one anna per cwt. for the nearer forward positions. This easier tendency was due to the continued poor demand from consuming centres and the heavy arrivals of Indian sugars which were offered at lower rates.

Prices for the further forward positions, however, such as July to December remained firm due to fair demand.

As regards Indian sugars, due to heavy arrivals and poor demand prices continued to decline. Arrivals during the week were estimated to be about 1,400 tons with stocks at about 2,000 tons.

Jamnagar and Bhavnagar.

During the week under review the Jamnagar sugar market showed further weakness owing to very heavy arrivals which made it necessary for holders to liquidate their commitments in order to find the necessary finance.

The outstanding feature of the week was the arrival of over 88,000 bags of which the majority arrived by two chartered steamers the s.s. *Naples Maru* and s.s. *England Maru*. If we add to this figure arrivals previously reported we reach the extremely large figure of 1,38,000 bags for this month already, while the steamer *Rajput* with an unknown quantity is due to arrive next week. Imports will therefore probably amount to 1,50,000 bags this month which is said to be a record for any single month during the past three or four years. At the close of the week stocks are estimated at 1,25,000 bags.

Calcutta Branch : 100, Clive Street. Post Box 113.

In Bhavnagar owing to poor demand importers inspite of lowering their rates have been unable to effect any large sales. Arrivals during the week included 20,000 bags ex s.s. *Nirvana* and inclusive of these stocks, are estimated 85,000 bags.

Delhi and the Punjab.

In Delhi and surrounding markets prices remained unchanged with dealers holding heavy stocks, the offtake in Delhi itself being limited to 250 bags daily. As regards the forward position dealers consider the outlook still uncertain and all await the Budget announcement.

Further North there is little to report. Enquiry for ready has been fair owing to the bad season experienced by Mills in the North-western area which has resulted in demand being met by factories which are usually unfavourably placed geographically.

Karachi.

During the week under review Java sugar prices for ready delivery registered a decline of about two annas per cwt. on account of poor offtake. During the latter part of the week some business was reported to have been concluded with Afghanistan merchants and offtake to this market is expected to amount to 900 tons. Arrivals during the week were reported to be 1,300 tons of Java white per s.s. *India* and stocks were estimated at 1,400 tons.

As regards Indian sugars a quantity of about 200 tons was reported to have arrived during the week under review which represents purchases made at the lower rates prevailing earlier in the season. At present owing to the higher rates now asked by factories business is not possible.

Cawnpore.

The market during the week under review has been extremely dull with an easier tendency, secondhand quotations for both ready and forward registering a decline of about two to four annas per Md. Both dealers and speculators appear to be nervous with regard to their forward commitments as the feeling that the import duty duly will be increased is not so strong. The rebuying activity of various Mills reported last week has now died down and this has had a further depressing influence on the market.

General.

According to latest reports received on the Java statistical position it would appear that the final clearance of Java's heavy stocks is in sight. It is reported that the NIVAS were able to sell during January '35 a quantity of 440,000 tons and that all whites ex 1932 crop have been sold.

It is further understood that these heavy sales would not influence the Java Government to release their hold on the control of planting for the 1936 crop and this is not expected to exceed 300,000 tons. It is estimated that 2,055,500 tons was available on the 1st January 1935 and if to this is added the estimated crops for the years 1935 and 1936 of 510,000 tons and 300,000 tons respectively, it would appear that 2,865,500 tons will be available till 1st April 1937.

It is assumed that exports during 1935 and 1936 will be the same as in 1934 *viz.* 1,100,000 tons per year, and taking local consumption for 24 months at 600,000 tons, a figure of 65,500 tons is arrived at as available on 1st January 1937.

World production, both cane and best, during 1933-34 is estimated by Messrs. Willet and Grey at 25,443,000 tons, showing an increase of 1,353,000 tons compared with the preceding season.

Stocks in M.B. Indian Ports on February 8, were estimated at 8,792 tons against 16,736 tons same time last year.

According to the final general memorandum on the All-India Sugarcane crop forecast for 1934-35, the area sown is estimated at 3,471,000 tons, against 3,308,000 acres last year, or an increase of 5 per cent. The total estimated yield of raw sugar (gur) now stands at 5,085,000 tons, showing an increase of 4 per cent. over last year's yield of 4,872,000 tons.

MISCELLANEOUS

WHEAT

Calcutta, February 28

A general decline in price was the feature of the local markets at the week end. The tone is quiet and a bearish outlook was noticeable, with no buyers for actuals or features. The possibility of damage or deterioration to the crop is not altogether ruled out by the market and a cautious policy of small commitments is being pursued by the trade.

Karachi holdings have diminished to 15,000 tons. Wheat dispatches to main ports continue on a good scale.

A general movement of activity followed on foreign markets the announcement of the gold clause decision. The effect in this country was negligible.

World wheat crop prospects are reported of a bullish nature. Climatic conditions have proved adverse on the American wheat belt and Australia's outturn is expected to be small. Russia is likely to come into the market as an exporter.

BENGAL RICE

Calcutta, February 28.

The third and final report on the winter rice crop of Bengal for 1934-35, states that on an average of the five years ending 1932-33, the area under winter rice represents about 17.9 per cent. of the total area under rice in British India. According to District Officer's estimates the total area under winter rice is 14,760,000 acres compared with 15,498,700 acres last year.

Accepting 85 per cent. as the provincial outturn, the gross yield of the crop on the basis of a normal yield of 18½ maunds of clean grain per acre, is estimated at 6,221,800 tons this year as against 6,225,700 tons last year.

STATISTICAL INFORMATION

RAILWAY TRAFFIC

Improved Earnings.

The total approximate gross earnings of all State-owned railways for the week ending 2nd February, 1935 (44th week), amount to Rs. 203 lakhs, Rs. 10 lakhs more than the figures for the preceding week and Rs. 15 lakhs more than the actuals for the corresponding week of the previous year and Rs. 23 lakhs more than the corresponding week of 1932-33.

The total approximate gross earnings from 1st April, 1934, to 2nd February, 1935, amount to Rs. 74.32 crores or Rs. 341 lakhs more than the actuals for the corresponding period of the previous year and Rs. 502 lakhs more than the corresponding period of 1932-33.

The following are the up-to-date approximate gross earnings and working expexnses of the State-owned railways from 1st April, 1934, as compared with the actuals of the correspondng period of last year:—

Railways	Earnings. Up to 2-2-34 (in lakhs)	Earnings. Up to 2-2-35 (in lakhs)	Working Expenses. Up to 31-12-33 (in lakhs)	Working Expenses. Up to 31-12-34 (in lakhs)

M. & S. M. ...	569	565	247	247
N. W. ...	1,165	1,241	653	667
S. I. ...	433	443	199	200
Tirhoot and Lucknow-Bareilly ...	147	151	44	47
Other Railways ...	32	37	17	18
Total ...	7,091	7,432	3,561	3,619

Debit adjustment to the extent of Rs. 1 lakh (approximately) has been made n the above figure of Rs. 74.32 crores owing to certain adjustments on the Assam Bengal Railway.

A comparison with the figures of the previous week for the principal State-owned railways shows increases in the approximate gross earnngs of all railways except the Burma and North Western. A comparison with the actuals of the corresponding week of 1934 shows increases in the approximate gross earnings of all the principal State-owned railways except the Great Indian Peninsula, Madras and Southern Mahratta and North Western.

Wagon Loadings.

Comparisons of figures of wagon loadings on Class I Railways for the week ending 2nd February, 1935, and for the cumulative period from 1st April to 2nd February, 1935, with the corresponding periods of the previous year are as follows:—

During the week ending 2nd Februay, 1935, there were loaded on the broad gauge 93,792 wagons, being 4,202 more than in the corresponding week of the previous year, or an increase of 4.69 per cent. On the metre gauge there were loaded 66,156 wagons, being 13,486 more than in the corresponding week of the previous year, or an increase of 25.6 per cent.

For the period from 1st April to 2nd February, 1935, there were loaded on the broad gauge 3,456,283 wagons, being 217,848 more than in the corresponding period of the previous year, or an increase of 6.73 per cent., and on the metre guage 2,168,502 wagons, being 124,770 more than in the corresponding period of the previous year, or an increase of 6.15 per cent.

INDIA'S GOLD EXPORTS

Gold valued at Rs. 1,50,29,786 was exported from during the week ended February 16.

The total amount of gold exported from Bombay since Britain went off the gold standard now stands at Rs. 221,91,70,524:—

The daily quotations for T. N. Shellac for the week ending Thursday the 28th instant are as follows:—

T. N. Shelac March dely.

Indian Finance

Investor's Supplement

Vol. XV. No. 10 SATURDAY, MARCH 2, 1935 Price Re. 1

MARKETS UNAFFECTED SO FAR BY BUDGET

The first budget of Sir James Grigg must be deemed favourable to stocks and shares. The partial removal of the surcharges on income-tax and super-tax must impart steadiness to the whole range of securities.

Apart from this, giltedge must receive marked strength from the impregnable ways and means position disclosed in 1935-36 estimates. The outstanding fact is that the Indian market will be receiving Rs. 37 crores from the loans which mature in 1935 and will be asked to put up money for a new loan which may be for a maximum of Rs. 25 crores and which may be even as low as Rs. 15 crores. On balance, the market will receive, say, Rs. 15 crores to Rs. 20 crores in excess.

The new loan issued in the year will be about half of the loan maturities. A good part of the funds released from the latter must seek re-investment amongst existing securities.

In addition, there is, according to our estimate, an annual saving of Rs. 24 crores earmarked for investment in giltedge and only in giltedge. In these circumstances, *Indian Finance* takes a distinctly bullish view of giltedge prospects.

The market, however, has not shown a like reaction to the budget. In fact, prices have receded somewhat: and the general feeling is, on the whole, one of diffidence. Bombay has been a seller throughout the day; and Calcutta bought a considerable quantity of 3½ per cent. Rupee Paper at Rs. 97-5.

The bearish sentiment started in Bombay; towards the finish, Calcutta, too, looked like losing its nerve. The only quarter from which continuous support was forthcoming was the operators in South India.

Under the lead of giltedge, jute shares and cotton shares kept quiet. Cement shares were, however, on the upward move in Bombay.

Indian Finance is disappointed at the kind of response which giltedge has shown to the budget. But it is not disheartened. It sees no reason to qualify or modify the confidence which it expressed in the Budget Supplement.

It may well be that the market is still suffering from some measure of indigestion. It may also be that anxious eyes are being cast towards London where withdrawals of Continental balances are causing disquietude and prospects of general election administer recurring knocks. Again, it may be that continued monetary stringency abates enthusiasm in operators.

But the intrinsic strength will prevail sooner rather than later.

In a definite assertion of such strength, the creation of the Reserve Bank as from April may well play an important part. We anticipate a considerable slackening in money conditions as a result of the Treasury Bills policy announced in the budget. We are confident that the Reserve Bank, once it comes into being, will actively bestir itself to promote cheap money.

As for the weakness of Sterling, it need only be pointed out that during the period when sterling has been depreciating since September, 1931, British Funds have been gathering increasing strength. Weaker sterling need not spell weaker giltedge.

The indigestion of the markets, of which we hear so much, is more a sentiment than a fact. Once a strong surge forward starts, the market will easily digest its present stocks and much more.

In view of Bombay being bearish, it were prudent to wait till the next week and know if a more detailed appreciation of the budgetary position induces a reversal of the operations from that end.

Meantime, the weaker market should afford a splendid opportunity for expanding one's holdings at favourable rates.

ABATEMENT OF SELLING PRESURE

Prospects of Recovery

(By Special Cables)

(From Mr. R. Gordon Cummings)

London,

February 28.

(1) Most Markets are good on cessation of selling orders.

(2) Gold Sharts are strong.

(3) Revival of Public buying should bring Market recovery.

(4) Sterling is weak.

INDUSTRIAL INVESTMENT TRUST LTD.

NOTICE is hereby given that the Second Annual General Meeting of Industrial Investment Trust Ltd., will be held at the Registered Office of the Company, 63, Apollo Street, Fort, Bombay, on 11th March, 1935, at 11 a.m. (S.T.) to transact ordinary business of the Company.

Notice is also hereby given that the Transfer Books of the Company will remain closed from 1st March, 1935 to 9th March, 1935, both days inclusive.

By order of the Board of Directors,
PREMCHAND ROYCHAND & SONS,
Secretaries.

Worth-While Investments:

INDIA:

TITAGHUR PAPER MILL

Present bright: Future brighter

By "Watch-dog"

Thursday Noon.

Since the reconstruction of its capital, the Titaghur Paper Mills Company has advanced from strength to strength. Amongst Indian paper manufacturing companies, it is the largest; and with tariff protection assured to the paper industry, and with the financial position of the Company so vastly improved, the ordinary shares of Titaghur Paper Mills can be confidently recommended both for the satisfactory yield now obtainable and for the still rosier prospects ahead.

The total capital of the Company is now only Rs. 19 lakhs, made up of Rs. 4.37 lakhs in ordinary shares of Rs. 2-8 each; Rs. 3.34 lakhs in 8 per cent. cumulative preference shares of Rs. 40 each; Rs. 8.16 lakhs in 8 per cent. cumulative preference shares of Rs. 100 each; and Rs. 3.18 lakhs in deferred shares of Rs. 1 each. The dividend arrangement as between ordinary shares and deferred shares is as follows:

Deferred shares will not participate in any dividend declared in any half-year until the ordinary shares receive a dividend at the rate of not less than 10 per cent. per annum for that year; any surplus remaining available for dividend in any half-year after payment of dividend to the ordinary shareholders at the rate of 10 per cent. per annum will be divided equally between the ordinary shares and the deferred shares.

The Company has eight paper-making machines with a producing capacity of 21,000 tons a year, which is double the capacity of the Bengal Paper Mill and treble the capacity of the India Paper Pulp Company.

In addition to the paid-up capital of Rs. 19 lakhs, the Company has 8 per cent. debentures for Rs. 25 lakhs.

The entire working capital has been provided without any recourse to any secured loans. Sundry liabilities in the form of deposits and for goods supplied, etc., come to nearly Rs. 22 lakhs.

On the assets side, it is important to note, at the outset, that there are three distinct items of block, namely, No. I Mill, No. II Mill, and Bamboo Mill. The total expenditure incurred on these three items up to September 30, 1934 was Rs. 159.96 lakhs. Total depreciation provided up to that date was Rs. 125.21 lakhs. The book value of these mills was, therefore, Rs. 34.75 lakhs.

To show how over-thorough has been the depreciation policy of the Company, I need only mention that the Bamboo Mill, which cost Rs. 25.18 lakhs, stands in the books at Rs. 1.48 lakhs. The bamboo forest, which cost Rs. 41,345, stands at Rs. 500 each; and assets like furniture, motor car and motor lorries stand at nominal figures.

Liquid assets in the form of stocks, book debts, investments and cash are in excess of Rs. 43 lakhs. The net liquid assets, that is, after providing for sundry liabilities but not for mortgage debentures, are about Rs. 17 lakhs.

It will thus be seen that the Company owns two up-to-date mills and a bamboo mill standing on a most conservative valuation in the books. The book value of the block is already so low that to provide for depreciation in future balance sheets on the same scale as in the previous balance sheets, would be open to serious criticism.

Turning to the profit and loss statement, the profit for the half-year ended September 30, 1934, was Rs. 6.56 lakhs. The sum set apart for depreciation was Rs. 3.29 lakhs. Debenture Redemption Fund Account received Rs. 90,000; Rs. 10,000 was transferred to the Indian Workers' Pension Fund. The amount left for distribution on the basis of the arrangement for profit allocation as between ordinary shares and deferred shares, was Rs. 2.27 lakhs; each ordinary share received a dividend of 9 annas per share free of tax; each deferred share received 4 annas per share free of tax.

This works out to 45 per cent on ordinary shares and 25 per cent. on deferred shares. It must be added that the dividend paid on the ordinary shares is equal to 11¼ per cent. per annum on the value of those shares prior to the reduction of capital.

The ordinary shares are now quoted Rs. 21½. A dividend of 9 annas per half-year or Rs. 1/2 per year gives an yield of 5.25 per cent. on the current market price. To get an yield of 5¼ per cent. tax-free on the equity shares of a company in such a superb financial position must be deemed an extremely attractive proposition.

But the position is even more favourable when the balance sheet figures are more closely analysed.

In the first place, there can be no justification for providing, any longer, for depreciation on the basis of Rs. 3¼ lakhs per half-year. Now that the block stands in the books at such a low figure as Rs. 34¾ lakhs, the policy in this regard must be reviewed by the Directors and modified considerably. I am sure that if the managing agents take a reasonable view of this suggestion, at least another Rs. 1 lakhs must be available for dividend distribution from this source.

In the second place, an increase in the dividend on ordinary shares is overdue. When the Company was making profits on the basis of Rs. 4½ lakhs per half year, the dividend on ordinary shares was 7 annas per half-year. By September 30, 1932, the profit of the Company for the half-year came to Rs. 5½ lakhs; and the ordinary dividend was increased by 2 annas to 9 annas. In the last two balance sheets, the profit has again gone up by Rs. 1 lakh. But the dividend continues on the same basis of 9 annas. The following table showing the profits and dividends will support our contention that an increase in the dividend of at least 2 annas must not be postponed any longer:

		(In lakhs)	Dividend
Half-ended Sept.	30, 1934	... 6.56	9 as.
,, Mar.	31, ,,	... 6.52	9 as.
,, Sept.	30, 1933	... 6,29	9 as.
,, Mar.	31, ,,	... 5.20	9 as.
,, Sept.	30, 1932	... 5.55	9 as.
,, Mar.	31, ,,	... 4.63	7 as.
,, Sept.	30, 1931	... 4.43	7 as.
,, Mar.	31, ,,	... 4.16	7 as.

In the accounts for the half-year ended September 30, 1932, the profits came to Rs. 5.55 lakhs; Rs. 2.67 lakhs was set apart for depreciation; Rs. 60,000 for various funds. The dividend was 9 annas. On September 30, 1934, the profit was Rs. 6.56 lakhs. The depreciation allocation was increased by Rs. 60,000; and the contribution to the various funds also rose by Rs. 30,000. In this way, the entire increase in the profit was diverted to other channels than that of the shareholders. It is time that the position in this regard is reconsidered by the managing agents and directors.

In the third place, the 8 per cent. debentures for Rs. 25 lakhs are due to be redeemed on March 31, 1936. As I have already stated, the net liquid assets are now in the neighbourhood of Rs. 17 lakhs; in the three balance sheets before March 31, 1936, the net liquid assets will be increased to about Rs. 25 lakhs. In this position, the Company may well decide on issuing debentures only for Rs. 15 lakhs as against the present figure of Rs. 25 lakhs.

While the debentures are now carrying 8 per cent. interest, the debentures that will be issued next year could be fixed up on the basis of 4 per cent. to 4½ per cent.

There will, therefore, be a considerable saving in debenture interest charges both because of the reduction in the amount of the debentures and in the rate of interest. I estimate that the minimum savings that might be expected in this connection will be Rs. 50,000 in each half-year.

This will enable the directors to increase the ordinary dividend by 15 per cent. As from the second half of 1936, the Company is bound to pay a dividend of 12 annas per half-year even if no changes in the depreciation policy as suggested in these columns are given effect to.

The intrinsic value of the ordinary shares is, therefore, nearer Rs. 30. These shares can be safely recommended as giving a most favourable yield on the basis of current earnings and as holding promise of considerable capital appreciation.

* * *

INVESTMENT BREVITIES

The Shahabad Cement shares, whose balance sheet I analysed last week and which stood then at Rs. 382½, have now moved up to Rs. 405. I understand that these shares have been strongly recommended to British investors. I also gather that Calcutta is taking quite a considerable interest in these shares. Further rise is quite on the cards.

* * *

Bundi Cements are equally favourable. At the time of writing, I do not know anything about what the budget has in store for the cement industry. Even if the budget should levy an excise duty, it should not make much difference in the profits which cement companies are making. There is a common selling policy amongst all the cement units ; and the sale price, which was reduced recently, may be raised, so as to make up for the imposition of the excise. All circumstances taken into consideration, cement shares must continue to appeal to *bonafide* investors.

* * *

I have received considerable enquiries about the Bank of Mysore which I tipped last week. The shares are Rs. 100 paid up. The dividend is 14 per cent. The present market quotation is Rs. 277½. This gives a clear yield of 5 per cent. tax-free. What more can you expect from a bank share—and a bank like the Bank of Mysore which stands in relation to the Government of Mysore in the same way as the Imperial Bank stands in relation to the Government of India. The Bank of Mysore does the Treasury work of the Mysore Government and carries all the deposits of the latter. These shares are as good as giltedge ; and you get 5 per cent. tax free :

* * *

Transactions in Reserve Bank shares have already been reported at Rs. 25 premium. The minimum yield that has now been fixed by the Governor-General is 3½ per cent. The Government have given away ½ per cent. more than they need have done. This additional ½ per cent. more than justifies the premium. For my part, I will not be surprised if these shares shoot up to Rs. 50 premium in the first few weeks after the closing of the list. The prospectus will be published in the papers next week-end. The list is to open as from March 22, and it will be closed on March 25. The fullest facilities are to be available to upcountry subscribers of these shares. No one need hustle or bustle. There is no question of the list being closed owing to over-subscription.

* * *

Jute shares have been off colour. This affords all the better opportunity for investors to pick up scrips at prices more favourable to themselves. No other industry, no other country presents investment opportunities superior to jute shares.

* * *

I like the shares of Adamjee Jute Mill. Amongst the Indian-owned concerns, this is the best-managed. It has, besides, the advantage of the extra-production which has been permitted to the non-Association Mills. At current market price, the yield is 5 per cent tax-free. The profit per loom was Rs. 729 the half-year ended September 30, 1934 —the highest profit—per loom earned by jute mills.

* * *

Central Bank of India has done extremely well in 1934. The profits are Rs. 24 lakhs—a record in the history of this Bank. This year is the Silver Jubilee year ; and, I expect, there will be a special bonus declaration of 1 per cent. or 2 per cent. The dividend for 1934 was unchanged at 6 per cent. The amount needed for dividend was Rs. 10 lakhs. Rs. 11¾ lakhs has been provided for doubtful debts. Rs. 2 lakhs goes to Buildings Sinking Fund. I believe, this policy will be continued for 2 or 3 more balance-sheets. The Inner Reserves will, thereby, be made impregnable ; and dividend increase can be safely undertaken thereafter. As it is, the Inner Reserves are already amazingly strong, the giltedge holdings showing an appreciation of Rs. 1 crore.

Worth-While Investments :

BRITAIN :

UNITED STEEL COMPANIES.

By R. Gordon Cummings.

Originally formed in 1918, this company was reconstituted in 1930 when it absorbed the business of one of its subsidiaries, the United Strip and Bar Mills. Until May, 1934, practically the whole of the issued capital was held by Steel Industries of Great Britain, a holding company formed by Clarence Hatry, to take over the shares of United Steel. Unfortunately for Mr. Hatry, he was unable to complete his far-seeing plans for the rationalisation of the steel industry in this country. Following the Hatry crash the shares of Steel Industries, and, therefore, the shares of United Steel, were left mainly in the hands of various banking interests.

In May, 1934, influential City interests arranged for the purchase of 4,500,000 United Steel ordinary shares at 20s. each, together with an option to purchase a further 2,077,223 shares at 23s. per share. All of these shares have now been marketed on the Stock Exchange.

The present authorised capital of United Steel Companies is £6,650,000 in £1 ordinary shares, of which 6,616,365 are issued. In addition, debentures of £2,500,000 bearing 4 per cent. interest are outstanding, these being issued in October last at par to redeem a fixed loan of £1,300,000 and repay certain loans and debentures of subsidiaries.

Apart from five branches operating in Cumberland, Yorkshire and Northamptonshire, the Company controls eleven subsidiary concerns with plants in Cumberland, Lincolnshire and Yorkshire. It also has a working agreement with Stewarts & Lloyds, providing for co-operation in a policy of extensions in steel production and sales policy. It was stated at the last meeting that the United Steel Compa[illegible] were responsible for over 16 per cent. of the total steel production in this country.

In 1930 the capital of the old companies was reduced by over £9,100,000, which sum together with reserves of £1,469,000 were utilised in writing down assets by £10,619,226. For comparative purposes,

therefore, results for the last four years ended 30 June, 1934, need only be considered. These are summarised below :—

	Net Profit after Interest, etc.	Depreciation	Ordinary % Earned	Ordinary % Paid	To Reserves
	£	£			£
1931 ...	41,321	*158,679	Nil.	Nil.	Nil.
1932 ...	187,345	12,354	0.2	Nil.	Nil.
1933 ...	351,438	101,438	2.0	Nil.	Nil.
1934 ...	947,680	672,680	13.2	5½	†175,000

*Loss.

†Comprising £150,000 to taxation reserve, and £25,000 to staff Provident Fund.

Balance-sheet figures for the last two years show that the business has been expanding. Unfortunately, a consolidated statement covering the subsidiaries is not given ; but in view of the large amount written off, fixed assets in 1930, it is reasonable to assume that the valuation placed on interests in subsidiaries is conservative. The last report stated that with two small exceptions none of the subsidiaries had provided for depreciation ; but as it is the policy of the parent company to provide in its own accounts for this charge, this statement is not at all disturbing. Balance-sheets for the last two years ending 30 June, 1934, are summarised below, the figures given being after making adjustments for final appropriations :—

Assets—	1934. £	1933. £
Plant, Land, Wagons, Tools, etc.	4,742,468	4,575,287
Subsidiaries—Shares ...	1,393,736	1,393,736
Advances, etc. (net) ...	2,539,716	2,318,908
Associated Cos.—Investments and Advances	338,867	301,470
Liquid Assets	2,520,580	1,782,398
Total ...	11,535,367	10,371,799
Liabilities—		
Capital—Issued	6,616,365	6,616,365
Loans and Mortgages	1,400,220	1,413,223
Creditors, tax reserve, etc. ...	1,402,518	776,654
Reserves—Maintenance, etc. ...	493,799	293,624
Central Depreciation ...	900,000	625,000
Subsidiary Investments	276,428	416,553
P. & L. Balance	446,037	230,380
Total ...	11,535,367	10,371,799

At the last meeting, the Chairman explained that the increase in the maintenance, etc., reserve was mainly due to a transfer of £140,000 no longer required from the reserve against subsidiary investments. He also pointed out that expenditure in modernising existing plant and installing new plant had ammounted to no less than £1,176,819 over the last four years.

As regards the outlook for the steel industries of Great Britain as a whole, there may be a slight relapse but when it is remembered that production of in production during the early part of this year, 8,859,700 tons in 1934 was 26 per cent. up on that of 1933, there will have to be a sharp relapse before profits of producing companies will be affected to any great extent.

Since the offer for sale in May, 1934, United Steel ordinary shares have been as high as 29s. 6d. They are now quoted at 27s. 6d. to yield 4 per cent. on last year's dividend. In view of the substantial earnings in 1933-34 it is almost certain, however, that the payment for the current year will be increased, especially as some saving should accrue from the debenture issue of October last. The 4 per cent. debentures are a good investment yielding 3.8 per cent. at 105. This stock is to be redeemed by a cumulative sinking fund of 1½ per cent. per annum commencing 30 September, 1935, to be applied annually to redemption by purchase at or below, or by drawings, at 102 per cent. up to September, 1944, 101 per cent. between that date and September, 1954, and at par any time between September, 1954, and September, 1964. Interest is payable on 31 March and 30 September.

BOMBAY TELEPHONE COMPANY, LIMITED.
NOTICE.

NOTICE is hereby given that the Thirteenth Ordinary General Meeting of the Bombay Telephone Company,, Limited, will be held at the Registered Office of the Company, Telephone Buildings, Home Street, Fort, Bombay, on Friday the 29th day of March 1935, at 5 O'Clock (S. T.) in the afternoon for the purpose of transacting the following business, namely :—

1. To receive the Report of the Directors and the Audited Accounts for the period ending 31st December, 1934.
2. To declare a Dividend.
3. To elect Mr. Vithaldas Kanjee who vacates his seat under Article 86 of The Articles of Association, and who is eligible for re-election.
4. To elect two Directors in place of those who retire by rotation under Articles 94 and who are eligible for re-election.
5. To appoint Auditors and to fix their remuneration.
6. To do such other work as may be placed before the Meeting by the Chairman.

By order of the Board,
H. C. CAPTAIN,
Secretary.

Bombay, 21st February, 1935.

The Transfer Books of the Bank will be closed from the 4th day of March, 1935 to the 16th day of March, 1935 both days inclusive.

By order of the Board,
H. C. CAPTAIN,
Secretary.

N.B.—Dividend Warrants for the Half-year ending 31st December, 1934, will be posted to the Shareholders at their registered addresses on and after the 18th March, 1935. Intimation of any change of address should be given to the Bank immediately.

THE WEEK IN THE EXCHANGES

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Friday evening, March 1.

The market continued in a depressed state and fluctuations based on anticipations of the Central Budget were narrow. Government Securities ruled steady during the week ; Jute mills shares, particularly the speculative scrips, were a little better owing to some support from the Bazar operators ; but the closing was again easier. Coals remained steady and unchanged. Cottons and Teas were lifeless. Public Utilities shew no change.

Government Securities.—The price of 3½ per cent. Rupee Paper, during this week, gradually steadied up from Rs. 96-14 to Rs. 97-8, closing to-day at Rs. 97-4. Investment demand has been on a small scale.

4% 1960-70's were done at Rs. 109-8 ; 5½ per cent. 47-50's at Rs. 102-2 ; 5 per cent. 1945-55 at Rs. 116-8 while 5 per cent. U. P. Bonds 1944 were on offer at Rs. 111-6.

Debentures.—There was no transaction in this section.

Preference.—Prices continued steady but only a few dealings took place. 7 per cent. Bally Jutes were placed at Rs. 146 ; 7% Hukumchands at Rs. 116 ; and Agarpara Preferences at Rs. 133-8. 7 per cent. Kinnisons Preferences were dealt at Rs. 153-8. There are buyers for British India Corporation Preferences at Rs. 158 cum dividend and New Victoria Cotton Pref. at Rs. 4-8.

Banks and Railways.—Only two transactions were reported in Light Railway shares—Hardwar Dehra Branch were done at Rs. 116 and Mymensingh Bhairab Bazaar (rebate) at Rs. 94.

Imperial Banks shares shew no change and were done at round Rs. 1,620 for fully paid, and Rs. 404 for contributories. Central Bank shares were slightly easier at Rs. 41-4 ; while Bengal Centrals appreciated to Rs. 10.

Cottons.—There is no fresh change here. Bengal Nagpurs had a solitary deal at Rs. 18 while Kesorams were quoted at Rs. 4 and New Victoria at Rs. 1-11.

Coals.—In this section, prices were kept at a steady level, but business was on a restricted scale.

There was a fair enquiry for West Jamuria, which has moved up to Rs. 13 from Rs. 12-2. Others were more or less unchanged. Bengals may be quoted at Rs. 283, Equitables at Rs. 38-4, Burakars at Rs. 13-10, Raneegunge at Rs. 34-12 and Standard at Rs. 31-8.

Jutes.—Dull conditions obtained in this section, and great difficulty was experienced by many brokers in placing orders. Howrahs, the chief speculative counter, was the only share that could easily placed. The highest price touched was Rs. 64-2 and the lowest Rs. 62-12 during the week. There was no outside support, but holders are now not anxious to liquidate their holdings at the moment, expecting a rise, following the commodity prices.

The following are the closing rates of to-day: Agarpara Rs. 26-12 ; Auckland Rs. 269 ; Bally Rs. 257-8 ; Birla Rs. 17-4 ; Barnagore Rs. 206 ; Clive Rs. 36-8 ; Fort Gloster Rs. 712 ; Gouripore Rs. 790 ; Kamarhatty Rs. 633 ; National Rs. 26-14 ; Nuddea Rs. 72-6a nd Reliance Rs. 82.

The dropping tendency in the commodity market, which ruled throughout the last week, was checked and a little recovery took place, on the latest reports from moffusil that the measures to restrict jute cultivation are being carried out satisfactorily. One or two big 'Bulls' who, as reported last week, liquidated their holdings in Jute futures, have again loaded themselves with fresh purchases. Business, however, was very little which has been creating every now and then a gloomy atmosphere.

Teas.—This section continued dull and uninterested.

Rubbers.—A fair enquiry was noticeable in this section, but there was no improvement in prices.

Sugar.—A good enquiry was noticeable in this section. Cawnpores are better at Rs. 37-12 ; Punjabs at Rs. 316 ; Razas at Rs. 164 and Rohtas very strong at Rs. 13. Carews have an easier market at Rs. 20-14 and Samastipore at Rs. 11. Balarampores have moved up to Rs. 21-4 and we consider there is still scope for an appreciation of 2 points in this scrip.

Engineering.—This section showed no change. Indian Irons are quoting Rs. 7-9 and Bengal Iron at Rs. 4-7. Business was reported in Standard Wagon at Rs. 67-12. Marshalls were dealt at Rs. 1-7.

Electrics.—Continued steady with dealings in Bengal Telephone at Rs. 18-10 and Cuttack Electrics at Rs. 9-9 ; Jubbulpores at Rs. 13-8 and U. P. Electrics at Rs. 165.

Miscellaneous.—Indian Wood Products are in demand at Rs. 33-12 and British India Corporation (ordy.) at Rs. 3. Midnapore Zemindary were steady at Rs. 74 while Bengal Paper eased off to Rs. 99. Titaghur Paper (ordy.) are on offer at Rs. 21-4 and Deferreds at Rs. 9-10. We think this scrip is attractive for lockup. India Paper continue unchanged at Rs. 105. Port Shippings were recorded at Rs. 16 and Burma Corporation were further easy at Rs. 5-14.

MADRAS STOCK EXCHANGE

(By Wire)

(From Our Correspondent)

Madras, Friday Morning,

Government Securities :—The securities market was fairly steady at the close. The firmness was displayed owing to a partial removal of surcharge on income tax. Business was passing in securities excepting Paper which was negligible. There were good sellers of 5 per cent. 1945-55 loan. Amongst Mysore loans, both 3½ and 5½ per cents. were offered without interesting buyers. Prices for other loans were also marked down in the absence of buying enquiry. There were no transactions reported in Port Trust and Municipal Debentures.

Fixed Interest Securities :—Amongst joint stock company debentures, Cochin Malabars were done at Rs. 104 with further buyers at this price. The Preference share market was active, noted deals being Buckingham and Carnatic Preferences at Rs. 155 ; Cochin Malabar at Rs. 30 ; Premier Hosiery at Rs. 10-12 ; Vasantas at Rs. 105-8 ; and several deals in Spencers 'A' & B Preferences at quoted prices.

Banks :—Bank shares were strong in sympathy with gilt-edge. Imperial fully paids were done upto Rs. 1,630. Amongst other bank shares, transactions were noted in Central Banks several times, as also in Bank of Indias, Indian Banks, Bank of Mysore, Bank of Hindusthans and Quilon Banks. The recent issue of "B" shares by the Indo Commercial Bank was considerably oversubscribed whilst the "C" shares till close of yesterday apnear to have been well supported. The "A" shares continued to have unsatisfied buyer at Rs. 115.

Public Utilities :—These were a popular section. Amongst notable deals included were, West Coast Electrics at Rs. 8 ; Vellores at Rs. 13-4 with buyers

21st December, 1911)

BOARD OF DIRECTORS.

The shareholders will be pleased at the satisfactory progress made by the Bank during the year. Our deposits now stand at more than Rs. 24 crores. The values of our Investments have appreciated considerably and show a good surplus over the holding values.

During the year under review two new Local Branches were opened at Kalbadevi and Bhuleshwar and two Sub-Branches were opened at Agra and Hyderabad (Sind).

The Directors have to report with sincere regret the resignation of Mr. Mathradas Vissonji owing to his appointment as a Director of the Imperial Bank of India. Mr. Vithaldas Kanji of Messrs. Vissonji Sons & Co. was invited to join the Board. He vacates his seat under Article 86 of the Articles of Association and being eligible offers himself for re-election.

Two of your Directors, Mr. Haridas Madhavdas and Mr. A. B. Dubash retire by rotation under Article 94 of the Articles of Association. They are eligible for re-election and offer themselves accordingly.

You will be requested to appoint Auditors for the ensuing year and to fix their remuneration.

S. N. POCHKHANAWALA,
Managing Director.

Stamps, Stationery Stock of Home Savings Safes and Safe Deposit Boxes			...				2,48,193	12	8
				Rupees			28,48,42,323	14	11

over, at the close ; Trichy Srirangams at Rs. 220-4 and Rangoon Telephones at Rs. 13-12 and Madras Telephones at Rs. 21-4. The report of the Madras Telephone Company together with accounts for 1934 makes satisfactory reading. The directors recommend the payment of the usual 9 per cent. free of tax dividend.

Mills:—Mills were active though the prices recorded show no improvement excepting Bangalores which jumped to Rs. 150 at which rate business was done. Business transpired in Buckinghams and Carnaties at Rs. 314, Cambodias at Rs. 13-12 ; Vasantas at Rs. 110 whilst Premier Hosiery Ordinaries were very popular at Rs. 10 ex-dividend. The Premier Hosiery Works declared last week an ad-interim dividend at the rate of 9 per cent. per annum free of tax for the half-year ended December 31, 1934. In the circular to the shareholders, the Directors mention that the working during the current year is satisfactory and that the dividends on the ordinary shares will be paid twice a year in February and August, the latter being final. This announcement and the satisfactory working of the mill have tended to increase the popularity of the ordinary shares.

Cements:—Cements were firm, considerable improvement being shown in the prices of Bundis. Business done includes Bundis, Coimbatores, Punjabs and Indians.

Sugars:—Sugar shares were steady but did not attract much attention with the solitary exception of Mysore sugars which improved to Rs. 28 with business done at this price.

Rubbers:—Rubbers were lifeless except for a transaction in Cochin Malabars at Rs. 2-2 and Thirumbadis at Rs. 8.

Teas:—Business was done in Vellamalais at Rs. 8½ ; Highland Produce at Rs. 17 and Devasholas at Rs. 7-8.

Miscellaneous:—This section was again prominent for the strength displayed by Tata Steels both touching fresh high records. Deals were also noted in Indian coppers and Shirajpores.

BOMBAY STOCK EXCHANGE

(*By wire*)

Bombay, Friday Evening.

(From Our Correspondent)

Money Market.—Money was steady, with Call quoting 3 per cent.

Exchange.—The market closed steady with Banks selling T. T. at 1s. 6⅛d. for near position; 1s. 6 3/32d. for March; 1s. 6 1/16d. for April; 1s. 6 1/32d. for May-June; 1s. 6d. for July-December. Banks are buying 3 months' bills at 1s. 6 7/32d.

Government Securities.—The Rupee Security Market improved on the eve of Central Budget though closed slightly lower on reduction of only one-third of surcharge on income tax. Since then, our London agent wires as follows.

> **"To-day's announcement of reduction in interest rates on New issue of National Savings Certificates from £3-1-5 to £2-18-4 further emphasises fundamental trend of money rates. We expect steady improvement until Budget, when we anticipate announcement of the programme for repayment of balance of Treasury 2 per cent. and flotation of housing loan. The repayment of locals is not expected. Should these forecasts materialise, prices ruling in giltedge market will stand substantially higher prior to jubilee celebrations."**

Rupee security market is likely to move up with London giltedged market. 3½ per cent. Paper was done as high as Rs. 97-9 though closed at Rs. 97-6 with good buyers roundabout Rs. 97-4. 3 per cent. 1941 closed at Rs. 100-14; 1947-50 at Rs. 102; 1943 at Rs. 105-15; 1960-70 at Rs. 109-8; 1955-60 at Rs. 116-4; 1935 at Rs. 100-5; 1939-44 at Rs. 108-2; 1940-43 at Rs. 109-4; 1938-40 at Rs. 108-9; 1945-55 at Rs. 116-6 and Bombay Development at Rs. 101-15.

Shares.—The Budget in general is considered to be satisfactory and particularly Cements moved up since there is no excise duty. There has been good deal of buying in popular scrips like Bundi and Shahabads. Budli differences have widened.

Textiles.—This section touched low levels in the beginning of the week on rumours of removal of surcharge on Lancashire goods but slightly improved at the close, as the Budget contained no reference regarding the removal of surcharge. Bombay Dyeing closed at Rs. 957-8; Central India at Rs. 387-8; Century at Rs. 318-12; Colaba at Rs. 155; Gokak at Rs. 216-4; Kohinnor at Rs. 237-8; New Great at Rs. 197-8; Swadeshi at Rs. 245.

Iron & Steel.—Steels have been fluctuating within a narrow range and closed a little quiet. *Profit-taking in Steels with a view to add on a reaction seems to be advisable.* Ordinaries closed at Rs. 158-8 ; Deferreds at Rs. 707-8 ; Second Preferences at Rs. 173-12. *Second Preferences seems sound investment and is worth going in for at current levels.*

Hydro-Electrics.—This group is steady. Andhras Valleys quoted Rs. 1,785 ; Hydros Rs. 178-12 and Tata Powers Rs. 1,715.

Cements.—Remarkable activity was noticed in Bundis and Shahabads. Bundis have improved from Rs. 41 to Rs. 46 ; Shahabads show an improvement of 50 points at Rs. 452-8; Gwalior Rs. 136-14; Indian Rs. 453-12; Katni Ordinary Rs. 415; Deferred Rs. 1,483-12; Okha Rs. 240; Punjab (Ordy.) Rs. 28-8; United Rs. 90.

Miscellaneous.—Belapur Sugars after being done as high as Rs. 320 have eased down at the close to Rs. 305. Petrols were steady at Rs. 4. Scindias closed at Rs. 12-12; Bombay Burmas slightly lower at Rs. 425.

Banks & Insurance.—Good enquiry in Imperial Banks persists. Fully paids closed at Rs. 1,635; partly paids at Rs. 410; Bank of Barodas at Rs. 105; Central Banks at Rs. 41¼; Bank of Indias at Rs. 124-8 and Union Banks at Rs. 6.

New India Assurance was steady at Rs. 48-14; Orientals at Rs. 4,750.

LONDON STOCK EXCHANGE

The week under review has not been altogether uneventful. The giltedge market was dull and prices were quoted very low at times. 3½ per cent. London Stock 1931 was quoted as low as 96 and Consols at 88¼. There was some recovery and on the last day of the week under review they were quoted at 98 and 88 3/4 respectively.

In the foreign exchange market sterling weakened in terms of dollars and francs and gold reached a new high record at £7-4-9 per fine oz.

Amongst other sections Minings were the chief centre of attraction and several advances were recorded throughout the week except at times when there was a slight setback due to profit-taking. On February 22nd Rand Mines were quoted at 149-6, sub Nigels at 246-3 and Crown mines at 280 and on the last day of the week they were quoted at 150/-, 263/9 and 287/6 respectively.

Rubber and Teas were unchanged except for the fact that the former showed a sagging tendency for some time.

Burma Oils and Shell Transport were quoted lower, but other srips were steady. Home Rails were firm on reports of improved earnings and Great Western Ordinaries and L.M.S. Ordinaries were quoted at 52¼ and 17¼ respectively.

NEW YORK STOCK EXCHANGE

Thursday:

The market ruled dull.

Due to talk of reorganisation, some Rail Roads came for some selling.

CONTINUANCE OF UNSETTLED CONDITIONS

GILTEDGE SETBACK

BETTER PROSPECTS

By R. GORDON CUMMINGS

By Air Mail

Special for "INDIAN FINANCE"

London, 19th February, 1935.

The past week has seen very unsettled conditions on the Stock Exchange owing to political, foreign and other troubles, combined with a temporary loss of confidence. On Tuesday and Wednesday severe declines were shown in practically every section of stock markets, but during the course of Thursday steady recovery took place. This recovery has since continued, although in a number of instances stocks close below the best of the recovery. Commodity troubles are still excercising an adverse influence, while the partial failure of several important new issues has not helped to restore confidence.

In the case of gilt-edged securities prices by Thursday mid-day had practically recovered to the closing levels of Monday. Subsequently, there was a general set-back, although not to any great extent. India Loans have fluctuated in sympathy with British funds. The recovery in industrial shares has been general, but practically without exception there are declines on the week. Features of strength have been *Boots Pure Drug* at 48s. 6d., *London Brick* at 84s. 3d., and newspaper shares. At one time 2½ per cent. *Consuls* fell to 88, against 94 a few weeks ago, and closed at 89½.

Fluctuations have also been seen in the iron, coal and steel section, the outstanding movement being *United Steels*, which at one time fell to 24s. 6d. before quickly recovering to 27s. 6d. Tobacco shares have also suffered, *British Americans* being down to under 120s., *Imperial Tobacco* to 136s., and *Carreras* A to £8, with the B at 20s. Partly on persistent rumours regarding the commodity position, *Tobacco Securities Trust* ordinary shares are lower at 87s. 6d. and the deferred at £5. *Courtaulds* have been active on the dividend, while *British Celanese* second preference close at 15s. 6d.

Coming to the more speculative issues, Tin shares have again been weak in sympathy with a moderate fall in the price of the commodity, and on ridiculous rumours which continue to circulate regarding manipulation in the price of the metal. These rumours, so far as can be ascertained, are entirely without foundation, although indirect connections between other commodities and tin can be traced. For the best part of the week, gold shares were under the influence of the postponed "Gold Clause" decision, but a revival of speculative and investment demand has led to substantial recovery in the prices of most shares. The leading features have been the 10s. shares of *West Witwatersrand Areas* and *Ventersposts*. As I predicted, there has been a sharp recovery in Australian gold shares, *Commonwealth Mining* spurting to 14s. 6d. on an excellent development cable from the Yellowdine field. In West Africans certain issues are lower, but on the whole the tone closes firm, with *Atta Gold* at 5s. 9d. ex. the rights to the new issue of one share in two at 4s.

There is little quotable change in rubber issues. Oils remain fairly steady with *Burmahs* at 77s. 6d. The long term outlook in this market is still considered to be bright.

Despite the satisfactory dividend announcements, Home Railway stocks have been affected by general market conditions and a decline of £42,000 in total traffics for the past week.

Following the decision in the "Gold Clause" great activity has been seen in American issues and gold-mining shares. Now that this uncertainty is removed I look forward to increasing activity in stock markets.

Nerves and Stock Markets

On previous occasions I have dealt with the outlook for stock markets generally, together with the effects which could be expected from uncontrolled speculation. Happenings during the early part of last week have confirmed my previous advice that speculators should always be prepared to pay for their purchases unless they can face nasty losses.

Mainly arising from the pepper crisis, the City of London has been suffering from a severe attack of nerves. As is usual in such cases rumours—many ridiculous and absurd—have sprung up almost every minute of the day. While there may always be a certain amount of truth in some of these rumours, the wise man will always be prepared to ignore most of the statements he hears. I seem to have spent most of my time lately sifting rumours relating to permanent men and supposed difficulties.

The behaviour of stock markets in the past week has amply demonstrated the damage which can be done by rash and hasty selling on the part of small interests. The severe price declines on Tuesday and Wednesday were only partly attributable to selling, the principal causes for the falls being bear sales and a defensive marking down of prices on the part of jobbers.

At the time of writing there is a more confident feeling, although it is likely that further disturbing factors will be disclosed in the near future. Providing, however, that these disclosures are not too severe, I fully expect stock markets generally to show marked recovery during the next few weeks.

On no account do I advise the hasty selling of gilt-edged and other first class stocks. He who acts in haste repents at leisure.

Home Railway Results

Results for 1934 of three of the Home Railway companies have now been published. The figures are on the whole up to market expectations.

As I disclosed last week, the *Southern Railway* is paying 4 per cent. on the 5 per cent. preferred ordinary stock as against only 3 per cent. for 1933, and 1 per cent. for 1932. Gross receipts at £23,152,749 show an increase of £554,332 over 1933. Expenditure increased by £306,689, and after making adjustments for miscellaneous receipts and expenditure, net revenue is £260,538 higher than 1933 at £5,800,335. After meeting debenture interest and preference dividends, together with 4 per cent. on the preferred ordinary stock—requiring £1,103,464

—the carry forward is increased by £2,426 to £227,353. The last dividend paid on the deferred ordinary stock was 1¼ per cent. of 1930.

Accounts of the *Great Western* show gross receipts up by £856,726 to £29,280,382. Revenue expenditure is higher by £340,638, and net income of £5,410,999 is £582,438 more than for 1933. After adding £323,948 (£71,529) profit on sales of investments, together with £550,000 (£1,350,000) from contingencies fund, and meeting debenture interest and preference dividends, 3 per cent. is again paid on the ordinary stock, and the carry forward increased by £2,547 to £43,226. Excluding investment profits, less than 1 per cent. was earned on the ordinary in 1934, while in 1933 there was a deficiency of £136,000 before any payment was made on this stock. Owing to the freeing of tax and other reserves, £510,419 is transferred to the contingencies fund, making this £1,782,476, a reduction of only £39,581 on the year after allowing for the £550,000 transferred to revenue account.

In the case of the *London, Midland and Scottish Railway,* total revenue increased by £2,948,000 in 1934. Working expenses were higher by £1,739,000, and the increase in net revenue over that of 1933 was £1,209,000 at £11,921,000. The full dividend is paid on the 4 per cent. preference and 5 per cent. redeemable preference stocks, against 3½ per cent. and 4⅜ per cent. respectively in 1933, while 1⅝ per cent. is to be distributed on the 4 per cent. 1923 preference capital, which last received a dividend in March, 1932. After these payments the carry forward is reduced by £39,135 to £20,519.

London Passenger Transport Board is paying 1½ per cent. interim dividend on the £23,624,607 "C" stock on account of the year to 30 June next. Until the pooling scheme in respect of certain traffics is settled the revenue available on the "C" stock cannot be determined.

Rail Investment and Speculation

As regards the outlook for Home Railway stocks, I see no reason to change my previous views. As pointed out above, these issues have been affected by general adverse conditions, with *London, Midland and Scottish* ordinary down to 18½, *Southern* deferred to 21, and *London and North Eastern* second preference stock to 25. In the case of *Great Western* ordinary, this stock yields practically 6 per cent. at 52, but as the 3 per cent. dividend has not been earned for the last four years, I am not particularly keen on this issue.

Turning to the prior charge issues not receiving their full dividends, *Southern* 5 per cent. preferred is a good investment, yielding 4¾ per cent. at 84 on a 4 per cent. dividend basis. For 1934 the dividend on *London, Midland and Scottish* 4 per cent. preference stock was earned with a surplus of over £600,000. At 82 to yield 4⅞ per cent. this stock is certainly attractive, while a yield of 3⅜ per cent. on the 1923 preference stock at 48 helps to pay for its keep until conditions are brighter.

Canal and Road Transport

Carriage of goods by inland waterways has also increased during the past year. It has been evident from the monthly traffic figures of 1934 that the *Manchester Ship Canal Company* was receiving its share of business. The dividend announcements are, however, a pleasanter surprise than I expected, the distribution on the 5 per cent. preference being increased from 2 per cent. for 1933 to 3½ per cent., and the ordinary payment from 1 per cent. to 1¾ per cent., while £35,000 is again placed to contingencies and repairs reserve. Under the rather peculiar provisions of the Company's articles, the 5 per cent. £1 preference shares are entitled to two-thirds of available profits until they receive 5 per cent. in any year, and the £1 ordinary shares to the remaining one-third. The preference are quoted at 14s. 6d. and the ordinary at 8s. 6d.

Amongst the motor transport undertakings, *Lancashire United Transport* is paying 5 per cent. on the ordinary capital—the first ordinary distribution since the company was formed. The £1 shares have risen to 24s. 6d. *Thomas Tilling,* which recently received an award of £1,750,000 stock in London Transport to cover assets taken over by that concern, is maintaining the ordinary distribution at 15 per cent. for the third successive year, and is distrubuting a 100 per cent. capital bonus, requiring £1,318,375, from reserves. Profits of £297,416 for 1934 are £43,209 below those of 1933, but taking account of a reduction of £100,000 on the London business sold, profits on other sections actually rose by £57,000 during 1934.

Courtaulds Dividend Surprise

One of the industrial events of the year is always the dividend declaration of Courtaulds, the large artificial silk combine. The declaration for 1934 is, indeed, a surprise and a decided departure from the ultra-conservative policy followed by the Board of Directors in recent years. Against 4½ per cent. a year ago, a final payment of 6 per cent. tax free is proposed on the £24,000,000 ordinary capital, making 7½ per cent. tax free for 1934, compared with 6 per cent. in 1933. According to the preliminary statement, however, profits of £2,217,789 are barely sufficient to cover the preference and ordinary dividends, as only £17,790 is added to the carry forward. Profits for 1933 were £2,552,050, equal to 9 per cent. on the ordinary capital, but they included a substantial sum of about £500,000, representing profit on exchange, so that actual trading profits have expanded during 1934. Nothing, against £700,000 in 1933, is added to reserve.

It is obvious from the liberal dividend policy that an optimistic view is taken of the future, while, possibly, the recent favourable decision in the Patents litigation may have cleared the way for some future developments. Another factor which may have weighed with the Board is the much brighter position of the rayon industry in America, in which Courtaulds are interested through their holding in the largest United States producing company—American Viscose. On publication of the dividend, the shares fell from 52s. 6d. to 49s. 9d., at which price they close. I have previously stressed the lock-up possibilities attaching to these shares, and on the latest results shall not be surprised to see them standing at 60s. in the near future. At current price the yield is 4 per cent. gross.

On the reverse side of the picture *Bradford Dyers' Association* made a loss of £9,332 in 1934, compared with a profit of £1,740 in 1933. These figures are after charging debenture interest, and £162,668 (£171,990) for depreciation. Dividends on the £2,549,237 5 per cent. preference stock are now two years in arrear, while the last payment on the £2,258,794 ordinary capital was 4-1/6 per cent. for 1930. Around 10s. the £1 preference units offer scope for capital appreciation.

Engineering Improvement

Satisfactory news is again to hand from the "heavy" industries, several companies announcing increased dividends. For the year to 31 December last net trading profits of *Mather and Platt,* mechanical, electrical and fire engineers, etc., rose sharply to £139,273, against only £112,140 in 1933, when £45,000 was transferred from contingency reserve. After crediting £26,309 investment realisation profits

during 1934, £25,000 (£23,000) is added to special reserve; the dividend on the £1,363,660 ordinary capital is increased from 6 per cent. to 7½ per cent., and £18,309 is added to the carry forward. This Company does an extensive business in India, and around 36s. 6d. the £1 ordinary shares are worth locking away.

Scottish Iron and Steel Company, an amalgamation of 13 malleable iron and steel manufacturing concerns, is paying a final of 4 per cent., making 6 per cent. dividend, on the £480,000 ordinary capital for 1934. This compares with 2 per cent. for 1933, when profits were £20,998. *Clarke, Chapman & Company*, general and electrical engineers, boiler-makers, etc., is paying 5 per cent. for the past twelve months on the £456,560 ordinary capital, against nothing for 1933, when a loss of £43,931 was reported, and 3¾ per cent in 1932. Although the ordinary shares have risen to 18s. 6d. they are still a good investment, yielding 5⅓ per cent.

Full details are now to hand regarding the big coal merger between Powell Duffryn, and Welsh Associated Collieries. If this merger is caused through a total of £17,000,000 Capital will be involved, while the new company will be the largest of its kind in this country.

Guinness Dividend Increase.

Further evidence of improvement in the brewing industry is again demonstrated this week by an increase of 1 per cent. to 12 per cent. in the interim dividend on *Arthur Guinness, Son & Company* ordinary stock, and the improved profits of *Peter Walker (Warrington) and Robert Gain & Sons*, the big Liverpool concern. For the two years ended 30 June, 1934 the annual dividends on Guinness ordinary were 22 per cent., plus bonuses of 5 per cent., making 27 per cent. in all per annum, against 29 per cent. for 1931/32, and 35 per cent. per annum for the three previous years.

Profits of *Peter Walker* for the year to 31 December, 1934 were £244,804, equal to 3.9 per cent. on the £2,270,000 ordinary capital, against £243,427 for the previous fifteen months, when earnings on the ordinary were the equivalent of only 1.6 per cent. per annum. Although these results are good, they did not come up to certain optimistic estimates, and the ordinary shares were marked down to 17s. 6d. Guinness £1 ordinary units are, however, strong at 140s.

Borax Consolidated Profits.

After providing £50,000 (£40,000) for depreciation, and £10,000 (nil) for income tax, net profits of *Borax Consolidated* for the year to 30 September, 1934 showed a sharp increase to £115,203, against £49,742 in 1932/33. The 1934 figure is the highest amount earned since £166,722 in 1928. As already announced, deferred dividends are resumed with a payment of 2½ per cent.—the first distribution since 7½ per cent. for 1927/28—and the carry forward is increased by £6,454 to £214,388. Sales of borax products were satisfactory during the past twelve months, while current sales are holding up well. Although the U. S. Potash Company, in which a large interest is held, made satisfactory profits in 1933 and 1934, no dividend has yet been received on this holding, as surplus earnings are being used to pay for extensions to the refinery plant. Borax deferred are 15s. ex dividend, the £5 preferred 100s., and the 4½ per cent. second debentures 105.

Woollen Shares.

As was to be expected from the increased distribution, profits of *Fleming Reid & Company*, the worsted spinners and retailers, owning over 350 shops situate throughout the Kingdom, show gratifying expansion. After again allocating £5,000 to shop insurance fund, the net figure for 1934 is £125,621, compared with £116,895 in 1933, which, after providing for preference dividends, represents 21.7 per cent. and 20.8 per cent. respectively on the £700,000 ordinary capital. Allocation to reserve is maintained at £20,000 and the dividend at 10 per cent., but the bonus is increased from 6¼ per cent. for 1933 to 7½ per cent. At 77s. 6d. the ordinary shares give the useful yield of 4½ per cent.

The above improved results lead me to believe that profits of *Patons & Baldwins*, also manufacturers of wool and hosiery yarns, should be well maintained during the current year ending 30 April. On fears that the sharp fall in wool prices some time ago would affect profits there was a sharp set-back in this Company's £1 ordinary units to nearly 40s., but calmer consideration has brought about steady recovery to around 59s. For the last financial year 10 per cent. tax free was paid on the ordinary out of earnings of 16 per cent. The yield is 4¼ per cent. gross and I consider the shares to be reasonably valued on prospects.

Investment Trusts.

Judging by reports recently published, it is evident that Investment Trust companies are slowly recovering from the effects of the recent depression. Profits in many instances are now on the up-grade, while steady appreciation is taking place in the market values of investments. I am particularly pleased with the 1935 reports of *Railway Debenture and General Trust*, and *Railway Share Trust & Agency Company*—two companies under the chairmanship of Mr. R. S. Guinness. Despite the names of these two companies holdings in railway stocks are small compared with total assets, the portfolios being distributed over a wide variety of investments.

In the case of Railway Debenture net revenue for the year to 15 January increased by £3,006 to £62,822, but although earnings were 5.2 per cent., against 4.7 per cent. in 1933/34, on the £650,000 ordinary stock the dividend is only maintained at 5 per cent. Investments with a book cost of £2,840,883 showed depreciation of 8 per cent. compared with market values; but this depreciation was covered by reserves and undivided profits of £264,378. At the previous year end depreciation was £427,916, or 15 per cent. on book values.

The increase in net revenue of Railway Share Trust was £1,766 at £81,640 equal, after preference dividend, to 5.4 per cent. (5.1 per cent.) on the £600,000 ordinary stock. Here again the dividend at 5 per cent. is the same as a year ago. Investments £2,217,104 are valued at an undisclosed amount below market prices, compared with depreciation of 3⅓ per cent. at 15 January, 1934, excluding reserves of £190,000.

Further improvement can be looked for during the current year. At the common price of around 116 the ordinary stocks of both companies yield 4.3 per cent., and I can safely recommend them as sound lock up investments. Among non-dividend paying Trust issues I would draw attention to *Atlas Electric and General Trust* £1 ordinary shares at 5s. 6d., and *City of London Brewery and Investment* 5s. deferred at 11s. In addition to a varied portfolio of investments the last named company has valuable interests in subsidiary brewing concerns, together with a freehold property in the City of London worth considerably more than the figure at which it appears in the balance-sheet.

Another satisfactory report is that of *Guardian Investment Trust*, which shows net revenue of £41,180 for the year to 20 January, 1935, or an increase of £5,237 ver the 1934 figure. The dividend on the £500,000 ordinary stock is raised by ½ per cent. to 5½ per cent., and at 138 this stock yields 4 per cent. The market value of investments is in excess of the book cost of £1,795,293.

South African Prosperity.

Whatever the advantages or disadvantages of being off the gold standard may be, South Africa has benefited considerably from the enhanced price of gold, not only in this industry itself, but in practically every section of her economic structure. I should say that the Union is the most prosperous country in the world at present.

In view of this prosperity, I am not at all surprised to learn that the *Union Steel Corporation (of South Africa)* is to pay 24 per cent. on the A and B 8 per cent. cumulative participating preference shares, representing arrears for the three years up to 31 December, 1934. As the paid-up capital of these preference shares is about £240,000, this distribution takes approximately £60,000, which means that profits for 1934 were this amount or greater, unless the carry forward from 1933 has been drawn upon. On this assumption, and deducting £20,000 for one year's preference dividends, at least 13 per cent. has been earned on the £300,000 ordinary capital, on which no distribution has been made since 2½ per cent. for the fifteen months to 31 December, 1925. I am, indeed, surprised that the 6s. 8d. ordinary shares still stand around par—a ridiculously cheap price in the light of these figures.

In the same way as the above company is doing better, I fully expect that industries catering for the enjoyment of mankind will also be profiting from an ever-increasing spending power. Formed only in June last to acquire the entire issued share capitals of two old established distilling and wine and spirit business—Castle Wine and Brandy Company, and E. K. Green & Company—*South African Distilleries and Wines* £1 ordinary shares are an attractive proposition at around 38s. 9d., although this compares with an issue price of 21s. barely eight months ago. The issued capital is £1,750,000, in 750,000 5½ per cent. preference and 1,000,000 £1 ordinary shares. The prospectus showed that adjusted profits of the two businesses being purchased averaged £167,368 over the last seven years, equal to 12 per cent. on the ordinary capital, after deducting the preference dividend and £6,000 for management expenses. Profits, however, for the last year of this period were £189,678, or the equivalent of 14¼ per cent. on the ordinary. The first report of the present company, which is to be made up to 30 June, 1935, should easily show profits of £200,000.

Despite recent plague difficulties, I am told that the sugar industry of Natal is in a relatively prosperous condition. Two well-known companies in this industry are Reynolds Brothers, and Illovo Sugar Estates. The former concern has been known to the London market for some time, but the shares of the latter were only introduced a few days ago.

Recent dividends on the £725,000 ordinary capital of *Reynolds Brothers* have been: 1933, 8 per cent.; 1934, 12 per cent.; and on account of the year to 31 March, 1935 an interim of 3 per cent. The management is enterprisingly developing various by-products, and in October last £200,000 7 per cent. debentures were replaced by a 5 per cent. stock. While I am not prepared to forecast the full rate of dividend for the current year, I would point out that if this is only 8 per cent. the £1 shares will yield 6 per cent. at 26s. 6d.

In the case of *Illovo Sugar,* the recent prospectus stated that the profit for the year to 31 March next was estimated at £44,785, after charging all expenses but without taking account of £7,265 which will be saved in future years on debenture interest. This is the equivalent of over 13 per cent. on the £330,000 issued ordinary capital, on which an interim dividend of 5 per cent. has just been declared. Interested parties tell me that the £1 shares are worth much more than present price of 38s. 9d.

Market Pointers.

As I forecasted last week, *Enfield Cable Works* is paying a final dividend of 15 per cent., making 25 per cent. for 1934, against 20 per cent. for the whole of the previous year. Profits of £123,636 are £13,618 up on those of 1933, and after payment of preference and ordinary dividends, £1,260 (nil) is added to reserve and the carry forward increased by £7,376 to £25,349.

Although dealt in mainly in Manchester and Birmingham the £1 shares of *Fodens Limited* should attract increasing attention when the full possibilities of the business are appreciated. Following a series of increasing losses, culminating in an adverse balance of £102,268 for the year to 30 June, 1933, there was a complete reversal in 1933/34, profits reaching almost £27,000, or the equivalent of 11.2 per cent. on the issued capital, all in ordinary shares. A debit balance of £14,000 was then carried forward, but as a 1 per cent. interim has been paid for the current year, I fully expect further improvement in profits, particularly as the company should be doing well from the manufacture of Diesel and other engines. At 18s. the £1 shares are bound for a higher price.

For the year to 31 December last *Orient Trust,* which has large interests in tea and rubber shares, earned £10,638, against £4,443 for 1933, the dividend being increased by ½ per cent. to 3 per cent. Depreciation of £69,837 (£96,183) on investments valued at £562,558 is more than covered by reserves etc. The £1 shares, now 20s., offer an excellent medium for diversified investment in the tea and rubbtr industries.

The proposed merger of *Hercules Cycle* and *Raleigh Cycle Holdings* has been abandoned, despite the fact that meetings have already sanctioned a large increase in the authorised capital of the latter concern. So far as I can ascertain these negotiations have broken down owing to difficulties regarding the valuation to be placed on the Hercules Company.

Trading profits of *John Barker & Company,* the large West-End stores concern, have increased by approximately £20,000 to £384,338 for the year to 31 January, 1935. The ordinary dividend, however, is again restricted to 15 per cent., although £150,000, compared with £135,000, is transferred to rebuilding and modernisation reserve. This is further proof of the reviving prosperity of the large stores companies.

Swan and Edgar, another West-End stores company, also reports a substantial increase in profits for the past year. As in 1934, 6 per cent. is being paid on the ordinary shares, which are a good investment at 26s.

The principal feature in mining markets has been a rise of almost 25s. in *West Witwatersrand Areas* 10s. share to 52s. 6d. on a very encouraging official development statement regarding property adjoining that of the Venterspost Company. In sympathy the shares of the latter concern have jumped sharply to 18s., while African and Europeans have been in demand up to 44s. 6d. on the company's interest in West Witwatersrand.

A very satisfactory first report is published by *West (Butchers),* a company formed last year to amalgamate a number of butchers businesses operating in London. A dividend of 15 per cent. is being paid on the 400,000 5s. ordinary shares, which are quoted at 12s.

Eastwoods Cement, a member of the Eastwoods Brick group, is paying an interim dividend of 5 per cent. (actual) on the ordinary shares. No interim was paid last year, although the full payment for the twelve months was 7½ per cent.

WALL STREET IN AIR MAIL WEEK

GOVERNMENT HOSTILITY TO UTILITIES

BY F. ROCKE

By Air Mail

Special for "INDIAN FINANCE"

Thanks to the Gold Clause uncertainty, the week under review has been devoid of interest. Rail issues were again weak and Utility companies' common shares were quoted lower, owing to the hostile attitude of the Administration with regard to the dissolution of holding companies. But the preferreds were in demand and advanced in prices, since they were secured against assets in case of liquidation. Other stocks including Steel, Motor and Chemicals were fractionally lower on the announcement that the Supreme Court decision on gold clause was again to be postponed. There was a fear that the peak of business activity might be over before the decision on the gold clause was made. There were heavy copper dealings in the commodity markets on the last day of the week, owing to increased demand from the automobile industry. One bull point for most sections of the stock exchange was Mr. Morgenthau's statement on the dollar management. Though the week has been on the whole featureless and the turnover small, prices were steady. February 12 was a holiday and all United States markets were closed for President Lincoln's Birthday Anniversary.

On the Bond market government issues were steady, Germans were firm and Japanese advanced slightly. There were talks of the Argentine Conversion Loan.

Rail stocks were weak this week also and the Newhaven group declined in view of the stricter lending attitude likely to be adopted by the R. F. C. A reorganising plan has been proposed for the Missouri Pacific Railroad which suggests the refunding of the Mortgage Bonds with obligations bearing 1 per cent. fixed interest and 4 per cent. contingent on earnings, the exchanging of the junior bonds for income obligations, the conversion of the preferred stock into common and the scaling down of the present common stock. These proposals are viewed in the financial circles as being hard on the bondholders. Insurance companies are planning open opposition to this scheme.

The future in the oil market continues to be bright and attention is concentrated on the Federal Oil Control Bill on which the House of Representatives Committee on Interstate Commerce has reported favourably. The Bill restores the old type of control recently held unconstitutional by the Supreme Court, but in a form which will encounter no opposition from courts.

The same situation continues in the automobile industry. The General Motors Corporation are building a large new Diesel engine plant near Chicago. The N. R. A. has promised a full review of the Automobile Code by the end of the year following a report by the Research and Planning Committee commending the efficiency of the Code but criticising its 'ruthless labour policy.'

General Motors domestic sales to consumers totalled 54,105 cars against 53,438 in January 1934 and sales to 55,727 against 46,190. Total motor production in the United States and Canada in January was 306,000 cars against 163,811 a year earlier. The increase is larger than usual, owing to the high Ford output which was one-third of the total.

Freight car loadings in the week ended February 2, totalled 598,000 cars against 665,600 cars in the previous week and 663,900 cars in the corresponding week of 1934.

Steel mill activity has been lower during the week under review. According to the "Iron Age," steel mill activity was at 53.5 per cent. of capacity compared with 56.5 per cent. last week. This setback is due in part to a fall in demand from the consuming trade. A renewal of activity is expected, however, as soon as producers are in a position to place orders for the second quarter.

The Jones and Laughlin Steel Corporation has announced plans for the construction of new plant costing $400,000.

American Steel Foundries 1934 net earnings equal $1.06 per share against $1.02 in 1933.

The Steel Corporation's despatches of finished steel products during January totalled 534,000 tons compared with 419,000 tons in December.

The code for the cigarette and allied industries was approved and signed by President Roosevelt. This provides against further price raising and increases payrolls by 20 to 40 per cent. Cigarette output for January amounted to 10.5 billions and for the past seven months to 73.6 billions against 65.5 billions in the corresponding period of 1933-34.

Investment Notes

The Kelvinator Corporation are manufacturers of commercial and domestic refrigerating plant. The issued capital consists solely of 1,125,592 shares of no-par common stock. The earnings have not been attractive; but the company is expanding its activities and the earnings are bound to improve. The quarterly dividend rate is 12½ per cent. giving a yield of about 3 per cent. at the present price of the stock. An increase in the dividend rate is not impossible of achievement and as a medium-term holding for capital appreciation the stock is attractive.

In the glass industry Libbey-Owens-Ford glasses and the Owens Illinois Glass Company are worthy of notice. The latter has benefited from the repeal of prohibition. The earnings in 1934 are the highest since 1929. There was a great demand for bottles ; and the company enjoyed boom conditions. But the company has declared a dividend well below earnings owing to a feeling that the demand may not continue at this level. The capital is composed of $30,000,000 in $25 per common stock.

The other company Libbey-Owens-Ford manufactures glass requisites for the automobile industry and with the increased activity in the automobile industry we may look for better conditions here also.

The Kroger Grocery and Baking Company is an exception during January in the chain stores concerns with better earnings. Sales during last month were 11.6 per cent. higher than last year. The company declares a quarterly dividend of 40c. and the stock at its present price yields just under 5 per cent. This company has an outstanding of $55,800 6 per cent. Cumulative First Preferred Stock, $55,600 7 per cent. Cumulative Second Preferred stock and 1,830,886 shares of no par common stock.

Business Pointers

Power output in the week ended February 9 was 6.8 per cent. higher than in the previous week.

The production of zinc in America during January amounted to 35,600 tons compared with 32,000 tons in December ; shipments totalled 35,000 tons against 27,700 while stocks at the end of January aggregated 119,900 tons compared with 105,600 tons at the end of December.

The exchange of American cheques at the leading clearing houses of the country during January amounted to $25,538,000,000 compared with $23,655,000,000 in December.

BOURSES IN THE AIR MAIL WEEK

Paris:

The disturbances in the commodity markets in London had some depressing effect on the Bourse in Paris and prices were generally quoted lower in the earlier part of the week under review. But the combined effect of the approach of the mid-monthly settlement and the official statement of Mr. Morgenthau regarding the successful managing of the view of the dollar in terms of foreign currency created a good impression in the market. The week, has, therefore, on the whole, been uneventful.

On the parquet, Rentes were quoted lower in the first half but improved later. Home Bank shares which moved likewise ruled steady despite the setback in Banque de France which at one time declined by 85 to 10,365.

Among internatinoals, Royal Dutch Petroleums were neglected and they were quoted low on many occasions. From a quotation of 14,600 frs. on February 8, they came down to 14,250 frs. on the 11th and 14,000 frs. on the 13th. On the last day of the week under review, there was some improvement and they were quoted at 14,160 frs. Rio Tintos were better, the closing quotation and opening quotation of the week being almost the same. Suez Canal shares were firm. Central Minings were better at 1,590 frs.

On the Coulisse, Diamond shares ruled weak for sometime but on the announcement of good results of De Beers company there was a strengthening; and on the last day of the week De beers rose from 393 to 405 and the Preferred from 827 to 849. The gold mining shares were firm; but there was little turn over. Rubbers and Oils were uninteresting and most shares showed a hardening tendency, though a slight improvement was perceptible in certain oil shares.

Berlin:

The week has been more cheerful in Berlin and most markets have been active. There was a slight slackening towards the end of the week but prices were steady. Banks which were the centre of attraction of last week did not improve during the week under review and most of them were fluctuating. Industrials were better early in the week with Farbenindustries at 144½. Ford motors and Dynamite Nobels rose a point. Electricals were steady and Rayons dull. Shippings were active and several rises were shown.

RESERVE BANK INAUGURATION NUMBER

EARLY APRIL SUPPLEMENT OF "INDIAN FINANCE"

In celebration of the creation of the Reserve Bank of India, *Indian Finance* has arranged to issue, early in April, a Reserve Bank Inauguration Number, to mark the importance of the occasion, to set out the significance of the institution, and to stress its meaning to national economic well-being.

The Special Supplement will be a fitting commemoration number; more, it will be a fully educative record.

It will seek to educate the lay public on the mysteries of reserve banking, the exact place of the Reserve Bank in the national banking system and general national economy, the status and balanc-sheet-story of the member banks that will be joining the reserve banking system.

Special articles have been fixed up, of which the following deserve to be particularly mentioned:—

(1) "Empire Central Banks" by Sir Cecil Kisch.

(2) "Central Banking and World Depression" by Dr. Paul Einzig.

(3) "Future of Gold Standard" by Mr. Maurice Green, Editor of the *Financial News*, London.

(4) "My Plan for Natinoalising Central Banks" by Mr. Francis Williams, City Editor of the *Daily Herald*, London.

(5) "Recent Changes in Central Banking Technique and Practice" by Dr. Paul Einzig.

(6) "The Bank for International Settlements—it's past, present and future" by Dr. Paul Einzig.

Full balance-sheet studies of each of the important banks will be furnished in the Special Number.

We have also arranged for various articles on various aspects of the Reserve Bank of India, its constitution, its working, its relation to the money market, its significance to national banking development, its coordination with Treasury authorities, etc.

Rates for advertisement are Rs. 200 per page and Rs. 125 per half page.

The price per copy of the Special Number is Rs. 3. But it will be supplied free to subscribers of *Indian Finance*.

Non-subscribers of *Indian Finance* who wish to have copies of the Reserve Bank Inauguration Number must register their orders before March 10. Such orders should be sent to:—Secretary (circulation), *Indian Finance*, Calcutta, together with a remittance at the rate of Rs. 3 per copy.
